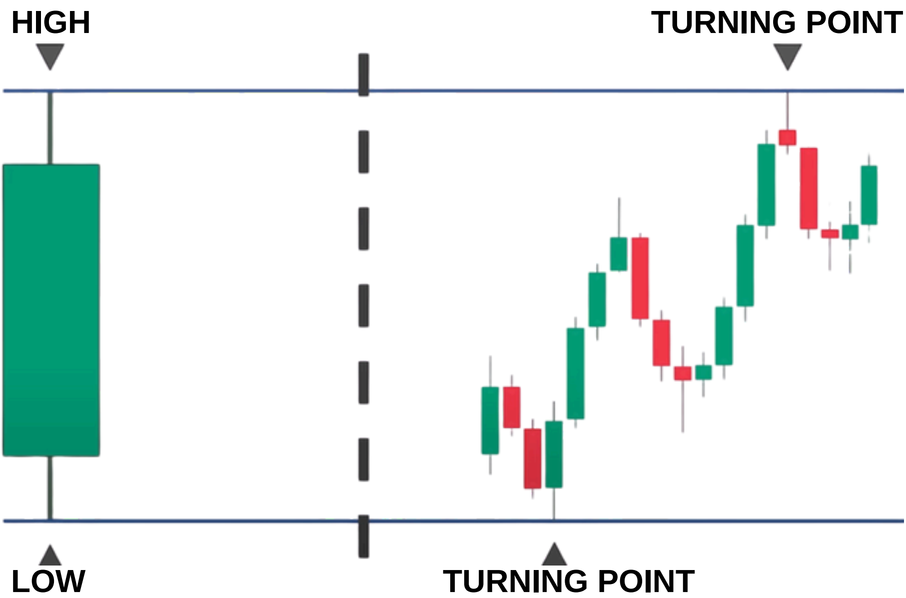
WHAT EXACTLY IS CANDLE RANGE THEORY ?

CANDLE RANGE THEORY OR CRT IS A TRADING CONCEPT THAT FOCUSES ON THE PRICE RANGE HIGH OR LOW OF A SINGLE CANDLESTICK ON THE CHART.

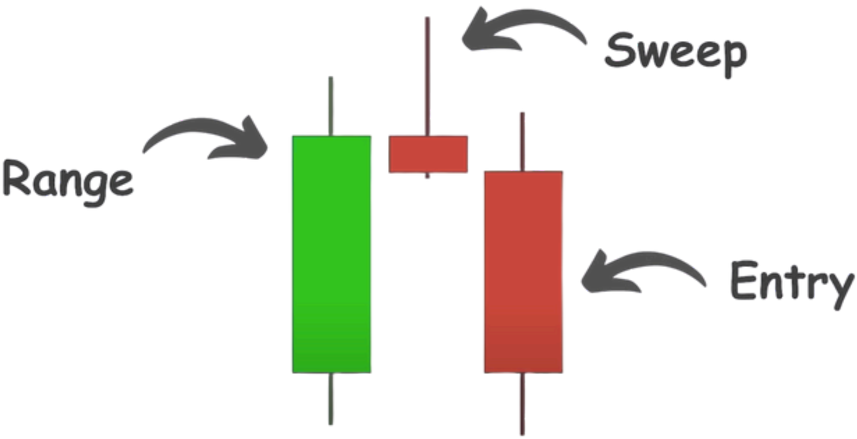


THE GENERAL IDEA BEHIND THIS MODEL IS THAT EACH CANDLE REPRESENTS A TRADING RANGE.

IF YOU BREAK THIS DOWN INTO LOWER TIMEFRAME CANDLE, YOU WILL NOTICE THAT HIGH AND LOW OF THE CANDLE OFTEN ACT AS TURNING POINT FOR ON THE LOWER TIMEFRAME. THESE POINTS FORMS MOST IMPORTANT LIQUIDITY LEVEL BECAUSE THAT IS THE HIGHEST AND LOWEST PRICE TRADED DURING PREVIOUS TRADING PERIOD.

PERIOD : CAN BE A DAILY , H4 , H1 ..... M1

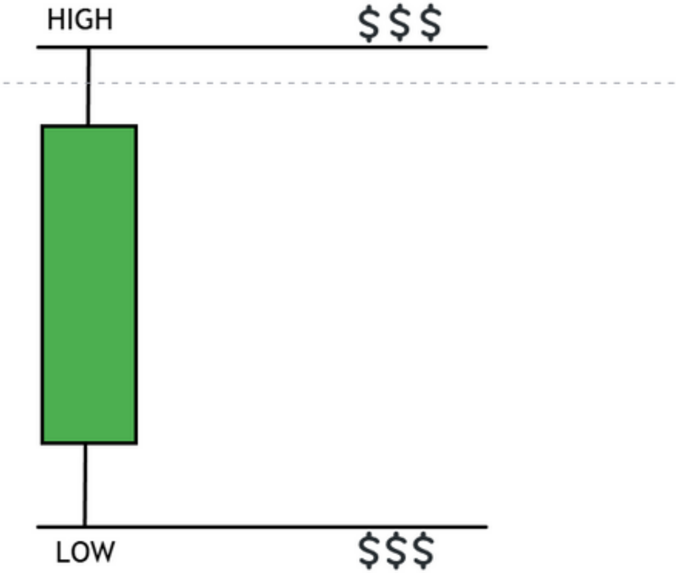
LET ME SHOW YOU HOW COMBINING THIS SINGLE CANDLE STRUCTURE WITH SMART MONEY CONCEPT CAN GIVES YOU A HIGH PROBABILITY TRADING OPPORTUNITY.



THE CONCEPT OF THIS STRATEGY INVOLVES 3 CANDLES AND EACH CANDLE HAS ITS OWN IMPORTANT ROLE.

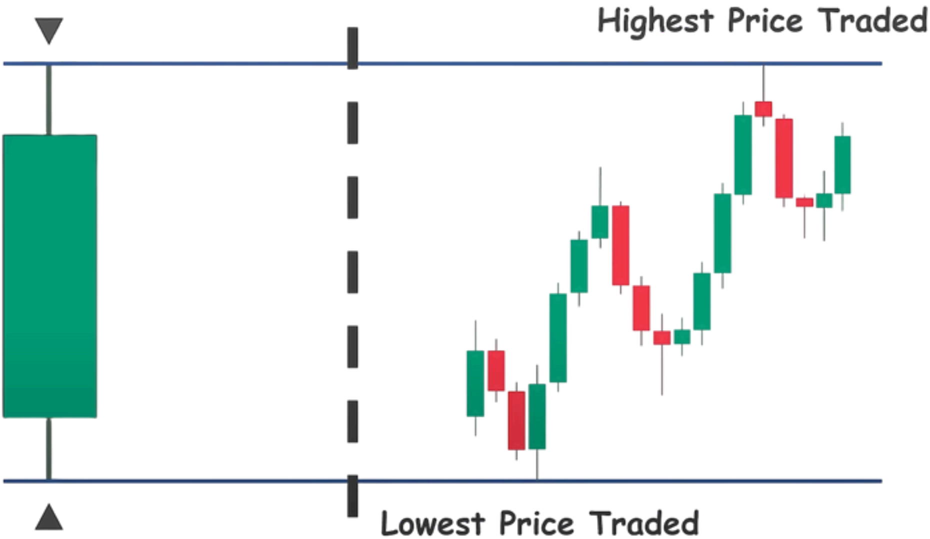
- FIRST CANDLE REPRESENT THE RANGE
- SECOND CANDLE CREATES THE SWEEP
- THIRD CANDLE PROVIDES THE ENTRY

LETS BREAK THIS DOWN STEP BY STEP AS A CONCEPT.



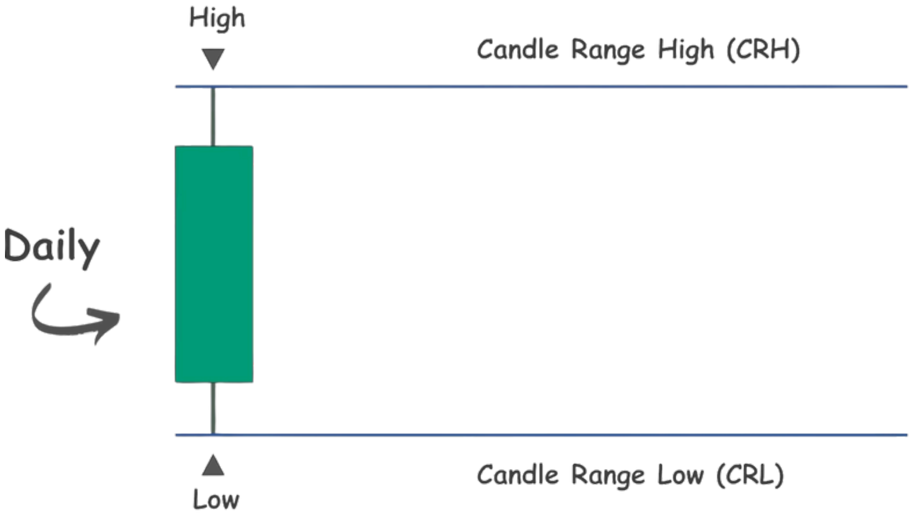
THE CANDLE RANGE THEORY SUGGEST THAT EACH CANDLE HIGH AND LOW ACT AS A MOST IMPORTANT LIQUIDITY LEVEL THAT THE FOLLOWING CANDLE WILL USE AS A TARGET.

WHEN YOU DROP DOWN TO LOWER TIMEFRAME YOU WILL NOTICE THAT THE HIGHS AND LOWS ACT AS A TURNING POINT.



ON THE EXAMPLE ABOVE, THE HIGH AND LOW OF THE DAILY CANDLE ACT AS A HIGHEST AND LOWEST TRADED PRICE DURING THAT DAY WHICH EMPHASIZE THE IMPOETANT OF THIS PRICESS.

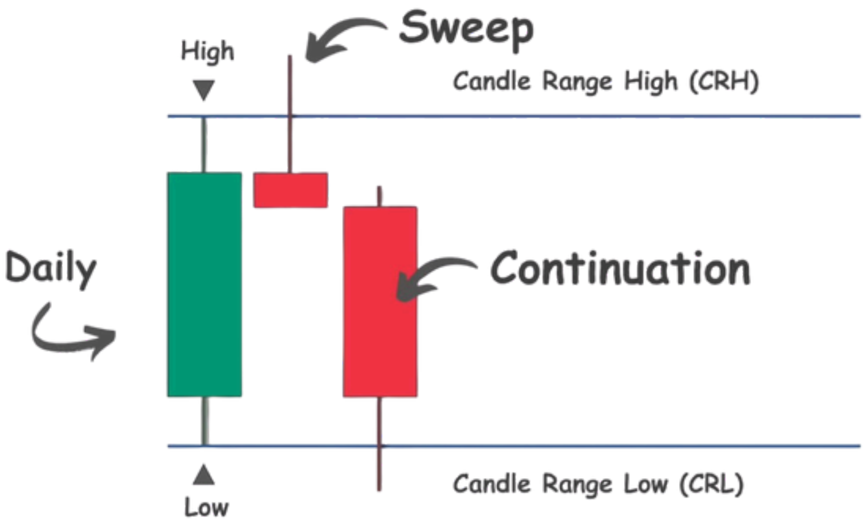
CANDLE RANGE THEORY ALLOWS US TO IDENTIFY WHERE IMPORTANT LIQUIDITY LEVEL ARE LOCATED WITHOUT ANALYZING LOWER TIMEFRAME - JUST BY OBSERVING A SINGLE CANDLESTICK.



THE UPPER LIQUIDITY LEVEL IS CALLED CANDLE RANGE HIGH (CRH).
THE LOWER LIQUIDITY LEVEL IS CALLED CANDLE RANGE LOW (CRL).

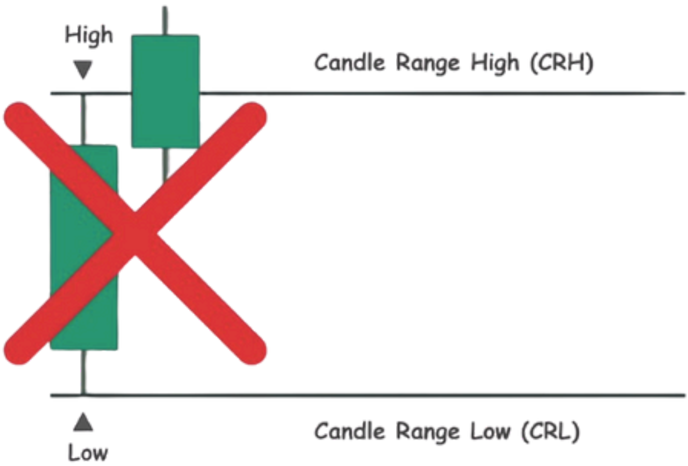
YOU CAN USE ANY CANDLE THAT APPEARS ON THE CHART THIS APPLY TO ANY TIMNEFRAME AS WELL.

HOWEVER CERTAIN CRITERIA HELPS US DIFFER WHICH CANDLE IS IDEAL TO USE AND WHICH ARE NOT.

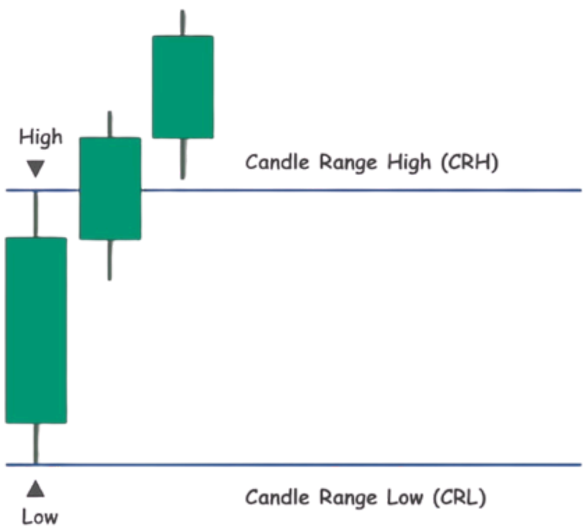


IN THE DIAGRAM ABOVE, IF THE SECOND CANDLE ATTACKS THE LIQUIDITY ABOVE THE CRH AND IMMEDIATELY REVERSES THE IS HIGH PROBABILITY THAT NEXT TARGET WILL BE THE LIQUIDITY BELOW THE CANDLE RANGE LOW.

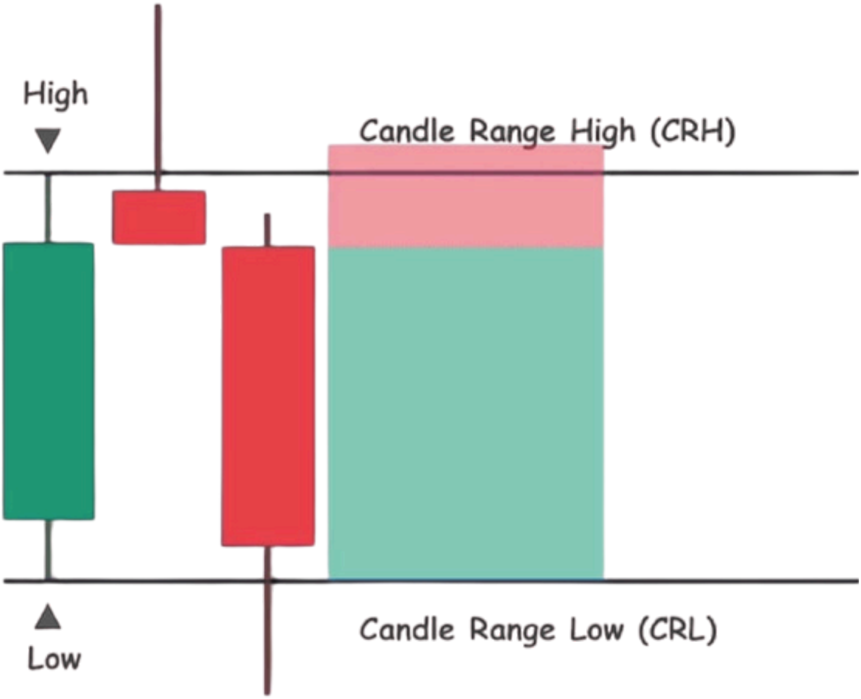
IN OTHER WORDS, THIS LIQUIDITY SWEEP FROM THE CRH SUGGESTS THAT THE MARKET IS LIKELY TO SHIFT DIRECTION AND SEEK OUT LIQUIDITY RESTING AT THE OPPOSITE END OF THE RANGE.



If instead, we see the second candle close above the CRH, then the potential Candle Range Theory setup becomes invalid.



This is because it's more likely that the market will continue pushing upward, rather than targeting the low of the first candle's range.



However, if the criteria are met, and the second candle fails to close above the Candle Range High, we can then look to the third candle for a potential short setup with our target being the Candle Range Low. Now, that was just the general idea and reasoning behind Candle Range Theory.

THANK YOU

THE REST WILL BE TAUGHT IN THE UPCOMING CLASS .
