Pengenalan ALCHEMIST

Alchemist adalah konsep atau cara berpikir dalam trading yang bertujuan mengubah area market bisa menjadi peluang trading kembali tinggi dengan memahami struktur harga, likuiditas, dan reaksi market.

Secara sederhana:

> Alchemist = seni membaca niat market, bukan sekadar melihat pergerakan harga.

WELCOME AND HAPPY READING MY BOOK

@abeyforex

ALCHEMIST + SNR

THIS CONCEPT TRANSFORMS NORMAL SUPPORT & RESISTANCE LINES INTO CONTEXT-BASED KEY ZONES THAT CONSIDER LIQUIDITY AND MARKET STRUCTURE, MAKING THEM MORE ACCURATE FOR ENTRIES, REVERSALS, OR CONTINUATION SETUPS.

🔑 CORE COMPONENTS OF THE ALCHEMIST MODEL

1. SNR ZONE → KEY SUPPORT & RESISTANCE ZONES, NOT JUST LINES.
2. LIQUIDITY SWEEP (MISS) → PRICE TAKES LIQUIDITY BY RUNNING ABOVE PREVIOUS HIGHS OR BELOW PREVIOUS LOWS.
3. ORDER BLOCK (OB) → THE LAST GENUINE BUY/SELL AREA (FOCUS ON THE 50% MIDPOINT OF THE OB).
4. MARKET STRUCTURE (MS) → MAIN STRUCTURE + SUBSTRUCTURE (UPTREND/ DOWNTREND + SWING HIGHS/LOWS).

💧 LIQUIDITY SWEEP (MISS)

DEFINITION & PURPOSE:

PRICE SWEEPS PREVIOUS HIGH/LOW TO COLLECT LIQUIDITY.

REMOVES PENDING ORDERS AND RETAIL STOP LOSSES.

AFTER THE SWEEP, THE MARKET IS PREPARED TO MOVE IN THE REAL DIRECTION.

📌 VALID SWEEP CONFIRMATION:

- ✓ MARKET HAS RETESTED THE ZONE
- ✓ READY TO MOVE IN THE OPPOSITE DIRECTION

📈 MARKET STRUCTURE (MS)

HOW TO USE IT:

1. IDENTIFY HIGHER-TIMEFRAME (HTF) TREND AND LOWER TIMEFRAME STRUCTURE (LTF).
2. TRADE IN THE DIRECTION OF THE MAIN TREND FOR A HIGHER WIN RATE.
3. A ZONE IS VALID IF:

- ✓ THERE IS A SWEEP OF A HIGH/LOW
- ✓ PRICE TOUCHES THE ZONE AND REJECTS
- ✓ IT ALIGNS WITH MARKET STRUCTURE
- ✓ CANDLE CLOSES NEAR THE OB OR 50% MIDPOINT

🎯 ENTRY TRIGGERS

ENTER ONLY WHEN ONE OF THESE SIGNALS APPEARS:

1. CONFIRMING CANDLE: ENGULFING / STRONG REJECTION WICK
2. CLOSE-BACK-IN-RANGE: AFTER SWEEP, PRICE CLOSES BACK ABOVE/BELOW THE ZONE
3. TOUCH 50% OB + CONFIRMATION CANDLE

⚠️ IF THE ZONE HAS MULTIPLE TOUCHES → IT BECOMES WEAKER → REDUCE POSITION SIZE OR WAIT FOR STRONGER CONFIRMATION.

❌ COMMON MISTAKES (AVOID THESE)

1. ENTERING JUST BECAUSE PRICE TOUCHED A LINE—WITHOUT CONFIRMATION.
2. IGNORING LIQUIDITY AND ORDER BLOCKS.
3. TRADING AGAINST THE HTF STRUCTURE (EXAMPLE: HTF BEARISH BUT TAKING BUY ENTRIES).

📌 EFFECTIVE USE OF SNR

WAIT FOR A CLEAR REACTION: REBOUND OR REJECTION.
MUST BE LOCATED NEAR KEY STRUCTURE POINTS (HH/HL/LH/LL).
IF THE ZONE IS TOUCHED AFTER A SWEEP, IT BECOMES VALID.

✅ CONFLUENCE CHECKLIST (BEFORE TAKING AN ENTRY)

- ✓ HTF SUPPORTS THE DIRECTIONAL BIAS (E.G., H4 BULLISH)
- ✓ LIQUIDITY SWEEP OCCURS AT THE ZONE
- ✓ ZONE ALIGNS WITH SNR + OB + 50% OB
- ✓ CONFIRMATION CANDLE APPEARS (ENGULFING / REJECTION / CLOSE-BACK-IN-RANGE)

🚫 WHEN SNR FAILS

THE ZONE BECOMES INVALID IF:

TOO MANY TOUCHES WITH NO REJECTION

NO LIQUIDITY SWEEP OCCURS

HTF TREND CONTRADICTS THE ENTRY DIRECTION

PRICE BREAKS THE ZONE WITH STRONG MOMENTUM

📦 ORDER BLOCK (OB) RULES

USE OB BEFORE MARKET BREAKS STRUCTURE.

USE THE 50% MIDPOINT OF OB FOR OPTIMAL ENTRY.

OB CAN BE REUSED IF THE CONTEXT STILL SUPPORTS IT.

💡 BULLISH REVERSAL PLAYBOOK (EXAMPLE SETUP)

1. HTF TREND BEGINS SHIFTING BULLISH.
2. PRICE SWEEPS SELL-SIDE LIQUIDITY BELOW PREVIOUS LOWS.
3. PRICE TAPS THE ZONE (SNR + OB + 50% OB) AND SHOWS REJECTION.
4. ENTER ONCE PRICE CLOSES BACK ABOVE THE ZONE OR BREAKS SUBSTRUCTURE.

🔥 QUICK RULES (SUMMARY)

1. TRADE IN ALIGNMENT WITH HTF BIAS (USE H4 FOR DIRECTION).
2. WAIT FOR A SWEEP + ZONE TOUCH + CONFIRMATION CANDLE.
3. USE THE 50% OB LEVEL FOR ENTRY AND STOP PLACEMENT.
4. MAINTAIN A MINIMUM R:R OF 1:1.5 AND MANAGE THE POSITION BASED ON STRUCTURE.

ALCHEMIST + SNR

KONSEP INI MENGUBAH GARIS SUPPORT & RESISTANCE BIASA MENJADI ZONA PENTING BERBASIS KONTEKS, LIKUIDITAS, DAN STRUKTUR PASAR, SEHINGGA LEBIH AKURAT UNTUK ENTRY, REVERSAL, ATAU CONTINUATION.

KOMPONEN UTAMA MODEL ALCHEMIST

1. SNR ZONE → AREA SUPPORT & RESISTANCE UTAMA, BUKAN GARIS.
2. LIQUIDITY SWEEP (MISS)
→ PRICE MENGAMBIL LIKUIDITAS DENGAN MENEMBUS HIGH/LOW SEBELUMNYA.
3. ORDER BLOCK (OB)
→ AREA TERAKHIR BUYER/SELLER NYATA (FOKUS PADA LEVEL 50% OB).
4. MARKET STRUCTURE (MS)
→ STRUKTUR UTAMA & SUBSTRUKTUR (TREND UP / DOWN + SWING HIGH/LOW).

LIQUIDITY SWEEP (MISS)

DEFINISI & TUJUAN:

PRICE MENYAPU HIGH/LOW SEBELUMNYA UNTUK MENGAMBIL LIKUIDITAS.

MENGHILANKAN PENDING ORDER & STOP LOSS RETAIL.

SETELAH SWEEP, MARKET SIAP BERGERAK KE ARAH SEBENARNYA.

- ✓ KONFIRMASI SWEEP VALID: ✓ MARKET SUDAH RETEST ZONA
- ✓ SIAP BERGERAK ARAH BERLAWANAN

MARKET STRUCTURE (MS)

CARA MENGGUNAKAN

1. IDENTIFIKASI TREND UTAMA (HTF) DAN STRUKTUR KECIL (LTF).
2. TRADE SEARAH TREND UTAMA UNTUK WINRATE LEBIH TINGGI.
3. ZONA VALID ITIKA:
ADA SWEEP HIGH/LOW
CANDLE SENTUH ZONA LALU REJECT
SEJALAN DENGAN STRUKTUR PASAR
PENUTUPAN CANDLE DEKAT OB / 50% OB

ENTRY TRIGGERS (TRIGGER MASUK)

MASUK MARKET KETIKA ADA SALAH SATU SINYAL BERIKUT:

1. KONFIRMASI CANDLE: ENGULFING / REJECTION WICK.
2. CLOSE-BACK-IN-RANGE. SETELAH SWEEP, HARGA KEMBALI MASUK KE ZONA.
3. TOUCH 50% OB → CANDLE KONFIRMASI.

JIKA ZONA DISENTUH BERKALI-KALI → SEMAKIN LEMAH → KURANGI LOT ATAU TUNGU KONFIRMASI KUAT.

KESALAHAN UMUM (Wajib dihindari)

1. ENTRY HANYA KARENA HARGA MENYENTUH GARIS TANPA KONFIRMASI.
2. TIDAK MEMPERHATIKAN LIKUIDITAS DAN ORDER BLOCK.
3. MELAWAN STRUKTUR TIME FRAME BESAR (HTF BEARISH TAPI ENTRY BUY).

CARA EFEKTIF MENGGUNAKAN SNR

TUNGU CLEAR REACTION (REBOUND ATAU REJECTION).

HARUS BERADA DI AREA HIGH/LOW PENTING (H-H / H-L / L-H / L-L).

JIKA ZONA DISENTUH SETELAH SWEEP, DIANGGAP VALID.

CONFLUENCE (CHECKLIST SEBELUM ENTRY)

- ✓ HTF SESUAI ARAH BIAS (MISAL H4 BULLISH)
- ✓ ADA LIQUIDITY SWEEP DI ZONA
- ✓ ZONA SELARAS DENGAN SNR + OB + 50% OB
- ✓ ADA CANDLE KONFIRMASI (ENGULFING / REJECTION / CLOSE-BACK-IN-RANGE)

JIKA SNR GAGAL

ZONA DIANGGAP INVALID JIKA:

BANYAK SENTUHAN TANPA REJECTION KUAT.

TIDAK ADA SWEEP.

HTF BEARISH TETAPI ENTRY BUY.

HARGA BREAK ZONA DENGAN MOMENTUM KUAT.

ORDER BLOCK (OB)

ATURAN

GUNAKAN OB SEBELUM MARKET BREAK STRUKTUR.

PAKAI LEVEL 50% OB SEBAGAI TITIK ENTRY TERBAIK.

OB BISA DIPAKAI LAGI JIKA KONTEKS Mendukung.

PLAYBOOK BULLISH REVERSAL (CONTOH SETUP)

1. TREND UTAMA MULAI NAIK.
2. PRICE SWEEP SELL-SIDE LIKUIDITY DI BAWAH LOW.
3. SENTUH ZONA (SNR + OB + 50% OB) → ADA REJECTION.
4. ENTRY SETELAH PRICE CLOSE KEMBALI DI ATAS ZONA ATAU BREAK SUBSTRUCTURE.

M5 - LTF Liquidity Sweep

On the lower timeframe (M5):

- Price sweeps previous highs/lows
- Stops are taken (retail traders)

This usually appears as:

- Long wicks
- False breakouts

Liquidity Sweep (L Sweep)

- Price slightly breaks above resistance
- Fails to hold or close strongly above it

This indicates:

- Liquidity has been collected
- The breakout is likely fake

M5 - LTF Sweep

- Di timeframe kecil (M5), harga:
- Menusuk high/low sebelumnya (liquidity sweep)
- Tujuannya: ambil stop loss retail

ini ditandai dengan:

- Wick panjang
- Fake breakout

L Sweep (Liquidity Sweep)

- Harga break sedikit di atas resistance
- Tapi tidak close kuat
- Menunjukkan:
- Likuiditas sudah diambil
- Bukan breakout valid

Key levels
 Poi HTF
 MSNR
 RBS Resistance becomes support
 Order Block
 Vair value gap
 Resistance classic A

M5-LTF Sweep

Key / H

L Sweep

Resistance

Inti konsep gambar ini

Urutan logika trading-nya:

1. Harga mendekati HTF key level
2. Terjadi liquidity sweep (fake breakout)
3. Harga reject di resistance
4. Terbentuk order block
5. Entry di order block / 50% candle
6. Target ke struktur berikutnya

Core Trading Logic

Step-by-step flow:

1. Price approaches HTF key level
2. Liquidity sweep occurs (fake breakout)
3. Price gets rejected at resistance
4. Order block forms
5. Entry at order block / 50% candle
6. Target the next structure level

Order block

Order Block

- Candle terakhir sebelum impuls kuat
- Area ini:
- Menjadi zona entry ideal
- Biasanya dipakai untuk:
- Sell setelah sweep high
- Buy setelah sweep low

Order Block

- The last candle before a strong impulsive move
- Acts as a high-probability entry zone
- Used for:
- Sell after a high sweep
- Buy after a low sweep

HTF key levels

L Sweep

Candle filllet 50%

Order block

Break Trendline & Market Structure Shift (MSS)

- Breakout Trendline**
- Trendline can be support/resistance trendline
 - In Bullish entry, take early morning penetration trend

Market Structure Shift

- Range moves from higher low
- Low break lower high sequentially
- In uptrend
- Breakdown trendline
- Break structure moving higher

Peak Rejection & Consolidation

- Bullish Inverse**
- Range back out → continuation buyer dominance

Channel Flag

- Range back out below channel trendline
- Signals bullish move to top

Support & S&W

- Support line balances with demand
- S&W line is to be seen

Liquidity Sweep of the High

- Resistance = Swing High
- Liquidate buy-side liquidity of all who high

L-Sweep

- Range recovery (high) & maximum resistance
- Stop loss beyond range of high
- Broken trends reversed, range and liquidity

Face of the Market

Decomposing Trendline

- Range moves from lower high & lower low
- Trend made break
- Range moves from lower high & lower low

Swing High & Swing Low

- Swing high side is liquidation
- Swing low side is liquidation

Breakout Trendline

- Swing low side is liquidation
- Swing low side is liquidation

1. Liquidity Sweep (Pengambilan Likuiditas)

Harga berkali-kali menyentuh likuiditas

Buy-side liquidity → equal high / high sebelumnya

Sell-side liquidity → equal low / low sebelumnya

Pergerakan ini bukan acak, tetapi bertujuan untuk:

Mengambil stop loss

Mengisi order besar tersembunyi

2. Market Structure Shift (MSS)

Setelah likuiditas diambil, terlihat:

Harga gagal melanjutkan arah sebelumnya

Terdapat break struktur internal

Minced candle displacement yang kuat

Ini menandakan perubahan harga jangka pendek.

3. Concept Premium & Discount

Harga bergerak di antara:

Premium zone → area ideal untuk sell

Discount zone → area ideal untuk buy

Baru terbaik biasanya:

Setelah liquidity sweep

Saat harga beraksi di area premium/discount

119.860.09

118.376.18

118.057.72

114.668.31

111.899.57

111.105.15

107.725.11

107.654.49

106.745.86

106.111.49

105.336.90

104.611.36

103.572.86

Kesimpulan Utama

Chart ini menegaskan bahwa:

Harga tidak bergerak sembarangan

Likuiditas selalu menjadi titik awal

Struktur memberi konfirmasi arah

Sesi memberi timing

Target sudah "ditentukan" oleh likuiditas

4. Dealing Range & Equilibrium

Setiap impuls membentuk dealing range.

Dari high ke low impuls

Equilibrium 50% menjadi titik support

Pola umum:

Harga bergerak dari ekstrem

Kembali ke equilibrium

Lalu melanjutkan ke sisi berikutnya

5. Perilaku Berdasarkan Sesi

Area vertikal berwarna

menunjukkan sesi trading aktif:

London Session → manipulasi &

ambil likuiditas

New York Session → ekspansi ke

target utama

Pergerakan paling valid biasanya terjadi setelah likuiditas diambil lebih dulu.

6. Support & Resistance Internal

Kuat dan palsu internal menentukan:

Support & Resistance internal

Aksi reaksi setelah displacement

Ini bukan SR klasik, melainkan:

Aksi reaksi setelah order flow

7. Target Akhir (Final Objective)

Di akhir pergerakan, harga mencapai:

Liquidity pool besar

Area level HFE penting

Setelah target tercapai, market biasanya:

Konsolidasi

Atau bersiap untuk siklus manipulasi berikutnya

1. Liquidity Sweeps

Price repeatedly targets buy-side and sell-side liquidity.

Buy-side liquidity: Equal highs / previous highs

Sell-side liquidity: Equal lows / previous lows

These sweeps are not random — they are necessary actions for institutions to fill large orders.

2. Market Structure Shift (MSS)

After liquidity is taken, price often shows a Market Structure Shift:

Failure to continue in the original direction

Break of internal structure

Clear displacement candle

This signals a potential change in short-term bias.

3. Premium & Discount Logic

Price oscillates between:

Premium zone → favorable for sells

Discount zone → favorable for buys

Entries are best taken after liquidity is swept and price reacts from these zones.

119,660.09

116,376.18

116,057.72

114,668.31

111,699.57

111,105.15

107,725.11

107,664.49

106,745.86

106,111.49

105,336.90

104,611.36

103,572.86

Key Takeaway

This chart demonstrates that:

Price does not move randomly

Liquidity comes first

Structure confirms direction

Sessions provide timing

Targets are predefined by liquidity

4. Trading Range & Equilibrium

Each impulsive move creates a trading range:

High ... Low of the move

Equilibrium (O/R) acts as a magnet

Price frequently:

Moves from one extreme

Returns to equilibrium

Then continues to the opposite side

5. Session-Based Behavior

The vertical shaded areas represent active trading sessions:

London Session: Often manipulation & liquidity grab

New York Session: Equilibrium toward the real target

Most meaningful moves occur after the market has already taken liquidity earlier in the day.

6. Support & Resistance (SR)

Boxes and horizontal lines mark:

Internal support & resistance

Reaction zones after displacement

These areas are not traditional SR, but reaction points created by order flow.

7. Final Objective

The chart ends with price reaching:

A major liquidity pool

Or a higher timeframe level

Once the objective is met, price either:

Consolidates

Or prepares for the next cycle of manipulation

103.572,06

» USD 01:56:38

91.692,40

MARKET SENTRY

Chart ini menunjukkan market bullish yang bergerak terstruktur, di mana harga

1. Mengantel likuiditas berupa

2. Mengantelisasi pembalikan struktur

3. Melakukan re-accumulation

4. Lalu melanjutkan ekspansi ke target berikutnya.

1. Fase Awal Akumulasi & Likuiditas

Di bagian kiri-bawah chart:

Harga bergerak ranging / konsolidasi

Terjadi beberapa liquidity sweep input low & sell-side

Rangak stop low buyer & seller diambil

Teknikanya:

> Mengantisipasi market sebelum move besar dimulai

2. Market Structure Shift (MSS) - Awal Bullish

Setelah sell-side liquidity diambil

Harga menembak Higher Low

Terjadi break struktur internal

Muncul impuls naik yang jelas

Ini adalah konfirmasi awal low bullish

3. Impuls & Dealing Range

Impuls naik menembak dealing range

Low impuls - High impuls

Midpoint / Equilibrium (EQ) menjadi area reaksi penting

Harga tidak langsung lanjut naik, tetapi

Retrace terkendali

Terap benakan di atas struktur

7. Kondisi Akhir Ekspansi

Di sisi kanan chart:

Harga break range

Struktur tetap bullish

Market mencapai HTF liquidity objective

Namun:

Area atas sudah premium

Lebih cocok ambil profit, bukan entry baru

1c Entry Logic (Cara Membaca Setup)

Entry ideal dalam struktur seperti ini:

BUY di diskon

Setelah:

Liquidity sweep kecil

MSS / BOS internal

Reaksi di Key Level / SNR

Stop:

Di bawah wing low / struktur terakhir

Target:

High range

Profit Point

Liquidity di atas

Kesimpulan ini

Chart ini mengajarkan bahwa:

Likuiditas selalu diambil dulu

Struktur memberi konfirmasi arah

Konsolidasi bukan berarti lemah

Harga bergerak dari diskon -> premium

Target utama adalah likuiditas

4. Re-Accumulation (Continuation Phase)

Area kotak di tengah chart menunjukkan:

Konsolidasi bullish

Beberapa fake breakdown stop loss kecil

Harga tetap respect key SNR / CL (Conceptual Framework)

Ini menandakan:

> Smart money masih hold posisi BUY.

5. Draw no Liquidity (Target Likuiditas)

Label seperti:

DRAW

Profit Point

Key SNR / MSNR

Menunjukkan bahwa harga:

Ditarik menuju low-side liquidity

Target berada di high sebelumnya / equal high

4,245,033

4,111,580

4,096,744

4,081,952

3,985,217

3,964,912

3,949,352

3,944,594

3,928,297

3,916,237

3,886,050

This chart shows a well-structured bullish market where price:

1. Clears liquidity
2. Confirms structure
3. Re-accumulates
4. Then expands toward higher targets

1. Accumulation & Liquidity Phase

On the left-lower side of the chart:

Price trades in a range / consolidation

Multiple sell-side liquidity sweeps equal lows

Stops from both buyers and sellers are taken

Purpose:

- To clear the market before the real move begins.
- 2. Market Structure Shift (MSS) - Bullish Confirmation

After sell-side liquidity is taken

Price forms a Higher Low

Internal structure is broken to the upside

A strong bullish impulse appears

This confirms a bullish directional bias.

3. Impulse & Dealing Range

The bullish impulse creates a dealing range

Impulse low → impulse high

The Equilibrium (EQ) acts as a key reaction level

Instead of immediate continuation

Price retraces in a controlled manner

Structure remains intact above key levels

4. Re-Accumulation (Consolidation) Phase

The boxed area in the middle highlights

Bullish consolidation

Minor stop hunts / fake breakdowns

Respect of key SNR / CF (Consequent Encroachment)

This behavior indicates:

- Smart money is still building long positions.

6. Entry Logic flow to Trade This Structure

Med BUY entries are taken:

In discount

After:

Minor liquidity sweep

Internal MSS / BDS

Reaction from a key Level or SNR move

Stop loss:

Below the most recent swing low / structure

Targets:

Range high

Profit Point

Upper liquidity pools

Key Takeaways

This chart reinforces that:

Liquidity is always taken first

Structure confirms direction

Consolidation is preparation, not weakness

Price moves from discount → premium

Liquidity defines the target

BASICS OF SUPPORT AND RESISTANCE (SNR)

@abayfore
2

DASAR-DASAR SUPPORT DAN RESISTANCE (SNR)

SUPPORT

- ➡ ADALAH LEVEL HARGA DI MANA PASAR MEMPERKIRAKAN CUKUP BANYAK TEKanan BELI LINTUK MENGHENTIKAN HARGA AGAR TIDAK TERUS TURUN.
- ➡ LEVEL INI MEMBUAT HARGA SEPERTI "TERSANDUNG" DAN DAPAT MENYEBABKAN HARGA MEMANTUL NAIK KEMBALI.
- ➡ SUPPORT SERING MUNCUL DI TITIK DI MANA HARGA SUDAH BEBERAPA KALI TURUN TETAPI TIDAK BISA MENEMBUS LEVEL TERSEBUT.

RESISTANCE

- ➡ ADALAH LEVEL HARGA DI MANA PASAR MEMPERKIRAKAN CUKUP BANYAK TEKanan JUAL LINTUK MENGHENTIKAN HARGA AGAR TIDAK TERUS NAIK.
- ➡ LEVEL INI MEMBUAT HARGA SEPERTI "MENABRAK PLAFON" DAN DAPAT MENYEBABKAN HARGA MENGALAMI PENURUNAN.
- ➡ RESISTANCE SERING MUNCUL DI TITIK DI MANA HARGA SUDAH BEBERAPA KALI NAIK TETAPI TIDAK MAMPU MELEWATI LEVEL TERSEBUT.

(1) BUYING – CLASSIC V

(GAMBAR MENUNJUKKAN POLA CANDLE PADA LEVEL SUPPORT)

(2) SELLING – CLASSIC A

(GAMBAR MENUNJUKKAN POLA CANDLE PADA LEVEL RESISTANCE)

CATATAN PENTING

CANDLE PERTAMA MENUTUP DI BAWAH SUPPORT

CANDLE BERIKUTNYA MEMBUKA DI LEVEL SUPPORT

MAKNA ANALITIS

HAL INI MENUNJUKKAN BAHWA HARGA SEMPAT TURUN MELEWATI LEVEL SUPPORT, NAMUN TEKanan BELI MASUK, SEHINGGA CANDLE BERIKUTNYA DIBUKA KEMBALI DI LEVEL SUPPORT. INI ADALAH SINYAL BAHWA KEKUATAN BELI KEMBALI KE PASAR, DAN KEMUNGKINAN TERJADI PANTULAN DARI AREA SUPPORT. PENGAMATAN INI MEMBANTU TRADER MENCI DENTIFIKASI TITIK-TITIK PEMBALIKAN HARGA DENGAN LEBIH AKURAT.

BASICS OF SUPPORT AND RESISTANCE (SNR)

SUPPORT

- ➡ A PRICE LEVEL WHERE THE MARKET EXPECTS ENOUGH BUYING PRESSURE TO STOP THE PRICE FROM FALLING.
- ➡ IT CAUSES THE PRICE TO "STUMBLE" AND MAY RESULT IN A BOUNCE BACK UP.
- ➡ IT OFTEN OCCURS AT POINTS WHERE THE PRICE HAS DROPPED MULTIPLE TIMES BUT CANNOT BREAK BELOW THIS LEVEL.

RESISTANCE

- ➡ A PRICE LEVEL WHERE THE MARKET EXPECTS ENOUGH SELLING PRESSURE TO STOP THE PRICE FROM RISING.
- ➡ IT CAUSES THE PRICE TO "HIT A CEILING" AND MAY RESULT IN A DOWNTURN.
- ➡ IT OFTEN OCCURS AT POINTS WHERE THE PRICE HAS RISEN MULTIPLE TIMES BUT CANNOT BREAK ABOVE THIS LEVEL.

(1) BUYING – CLASSIC V

(2) SELLING – CLASSIC A

IMPORTANT NOTE

THE FIRST CANDLE CLOSES BELOW THE SUPPORT.

THE NEXT CANDLE OPENS AT THE SUPPORT LEVEL.

ANALYTICAL MEANING

THIS INDICATES THAT THE PRICE DIPPED BELOW THE SUPPORT LEVEL, BUT BUYING PRESSURE ENTERED THE MARKET, CAUSING THE NEXT CANDLE TO OPEN BACK AT THE SUPPORT LEVEL. IT IS A SIGNAL THAT BUYING STRENGTH IS RETURNING TO THE MARKET, AND A BOUNCE FROM THE SUPPORT MAY OCCUR. THIS OBSERVATION HELPS TRADERS IDENTIFY REVERSAL POINTS MORE ACCURATELY.

TIPE-TIPE SUPPORT DAN RESISTANCE

SELLING

SANGAT PENTING — INGAT BAIK-BAIK HAL INI.

SUPPORT DAN RESISTANCE, DARI APA YANG SUDAH SAYA PELAJARI DAN ANALISIS MELALUI BANYAK CHART, BUKAN SEKADAR GARIS YANG DIGAMBAR AGAR TERLIHAT RAPI. ITU ADALAH JEJAK PERILAKU PASAR DAN CERMINAN PSIKOLOGI TRADER YANG TERLIHAT MELALUI PERGERAKAN HARGA.

ADA BANYAK JENIS SUPPORT DAN RESISTANCE, DAN MASING-MASING MEMILIKI KARAKTERISTIK DAN KEKUATANNYA SENDIRI. SEBAGIAN BAGUS UNTUK MENGIDENTIFIKASI TITIK PEMBALIKAN (REVERSAL), SEBAGIAN MEMBANTU MENDETEKSI KELANJUTAN TREND (TREND CONTINUATION), DAN SEBAGIAN LAINNYA BAHKAN MENUNJUKKAN PIHAK MANA — PEMBELI ATAU PENJUAL — YANG MULAI MENGAMBIL KENDALI.

HARI INI, SAYA AKAN MENUNJUKKAN EMPAT TIPE UTAMA YANG SECARA PRIBADI SAYA GUNAKAN, ANALISIS, DAN SUDAH MEMBERIKAN HASIL NYATA DARI PENGALAMAN SAYA SENDIRI.

SETELAH KAMU MEMAHAMI KEEMPAT TIPE INI, KAMU TIDAK AKAN MELIHAT PASAR DENGAN CARA YANG SAMA LAGI.

ILUSTRASI SELLING — CLASSIC A DAN CLASSIC C/V (GAMBAR SESUAI HALAMAN)

CLASSIC A

1. TUNGGU HARGA MENCAPAI AREA SNR (SUPPORT ATAU RESISTANCE).

2. HARGA MENYENTUH LALU JATUH — TANPA RETEST KEMBALI.

TYPES OF SUPPORT AND RESISTANCE

SELLING

VERY IMPORTANT — REMEMBER THIS WELL.

SUPPORT AND RESISTANCE, FROM WHAT I'VE STUDIED AND ANALYZED THROUGH MANY CHARTS, ARE NOT JUST LINES DRAWN TO LOOK NICE. THEY ARE THE FOOTPRINTS OF MARKET BEHAVIOR AND A REFLECTION OF TRADER PSYCHOLOGY SHOWN THROUGH PRICE MOVEMENT.

THERE ARE MANY TYPES OF SUPPORT AND RESISTANCE, EACH WITH ITS OWN CHARACTERISTICS AND STRENGTH.

SOME ARE PERFECT FOR IDENTIFYING REVERSAL POINTS, SOME HELP DETECT TREND CONTINUATION, AND SOME EVEN REVEAL WHICH SIDE — BUYERS OR SELLERS — IS STARTING TO GAIN CONTROL.

TODAY, I'M GOING TO SHOW YOU FOUR MAIN TYPES THAT I PERSONALLY USE, ANALYZE, AND HAVE SEEN REAL RESULTS FROM THROUGH MY OWN EXPERIENCE. ONCE YOU UNDERSTAND THESE FOUR TYPES, YOU'LL NEVER SEE THE MARKET THE SAME WAY AGAIN.

CLASSICA

1. WAIT FOR PRICE TO REACH THE SNR LEVEL (SUPPORT OR RESISTANCE).
2. PRICE TOUCHES THE LEVEL AND DROPS — NO RETEST.

TIPE-TIPE SUPPORT DAN RESISTANCE 1.1

BUYING

SANGAT PENTING — INCAT BAIK-BAIK HAL INI.

SUPPORT DAN RESISTANCE, DARI APA YANG SUDAH SAYA PELAJARI DAN ANALISIS MELALUI BANYAK CHART, BUKAN GARIS YANG DIBUAT SEKADAR UNTUK TERLIHAT BAGUS.

MEREKA ADALAH JEJAK PERILAKU PASAR DAN REFLEKSI PSIKOLOGI TRADER MELALUI PERGERAKAN HARGA.

ADA BANYAK JENIS SUPPORT DAN RESISTANCE, MASING-MASING DENGAN KARAKTERISTIK DAN KEKUATAN BERBEDA.

SEBAGIAN TEPAT UNTUK MENDETEKSI REVERSAL, SEBAGIAN UNTUK KELANJUTAN TREN, DAN SEBAGIAN MENGUNCIKAN PIHAK MANA — BUYER ATAU SELLER — YANG MULAI MEMEGANG KONTROL.

HARI INI, SAYA AKAN MENUNJUKKAN EMPAT TIPE UTAMA YANG SAYA CUNAKAN, ANALISIS, DAN TERBUKTI MELALUI PENGALAMAN PRIBADI. SETELAH MEMAHAMI TIPE-TIPE INI, KAMU AKAN MELIHAT PASAR DENGAN CARA YANG BERBEDA.

PENJELASAN TIPE BUYING

1.

KAMU BISA MELIHAT BAHWA SUDAH ADA SATU PENOLAKAN (REJECTION).

KEMUDIAN HARGA NAIK UNTUK Mencari LEVEL PENTING, SEBELUM TURUN LAGI DENGAN PENOLAKAN LAINNYA, DAN SETELAH ITU BARULAH HARGA MELANJUTKAN PERGERAKANNYA.

2.

MIRIP TIPE 1, TETAPI TIDAK ADA PENOLAKAN.

SEBALIKNYA, TERDAPAT LIKUIDITAS.

ADANYA LIKUIDITAS SEBELUM MENYENTUH ZONA TERSEBUT MENUNJUKKAN KEKUATAN.

TYPES OF SUPPORT AND RESISTANCE 1.1

BUYING

VERY IMPORTANT — REMEMBER THIS WELL.

SUPPORT AND RESISTANCE, FROM WHAT I'VE STUDIED AND ANALYZED THROUGH MANY CHARTS, ARE NOT JUST SIMPLE LINES THAT MAKE THE CHART LOOK NEAT.

THEY ARE THE FOOTPRINTS OF MARKET BEHAVIOR AND THE REFLECTION OF TRADER PSYCHOLOGY THROUGH PRICE ACTION.

THERE ARE MANY TYPES OF SUPPORT AND RESISTANCE, EACH WITH ITS OWN CHARACTERISTICS AND STRENGTH.

SOME ARE IDEAL FOR DETECTING REVERSAL POINTS, SOME HELP IDENTIFY TREND CONTINUATION, AND OTHERS REVEAL WHICH SIDE — BUYERS OR SELLERS — IS BEGINNING TO GAIN CONTROL.

TODAY, I WILL SHOW YOU FOUR MAIN TYPES THAT I PERSONALLY USE, ANALYZE, AND HAVE CONFIRMED THROUGH REAL RESULTS BASED ON MY OWN EXPERIENCE.

ONCE YOU UNDERSTAND THESE TYPES, YOU WILL NEVER LOOK AT THE MARKET THE SAME WAY AGAIN.

TYPE DESCRIPTIONS

1.

YOU CAN SEE THAT THERE WAS ALREADY ONE REJECTION. THEN THE PRICE MOVED UP TO SEEK A KEY LEVEL BEFORE DROPPING AGAIN WITH ANOTHER REJECTION, AND ONLY THEN CONTINUED ITS MOVE.

2.

SIMILAR TO TYPE 1, BUT THERE IS NO REJECTION. INSTEAD, THERE IS LIQUIDITY.

THE PRESENCE OF LIQUIDITY BEFORE REACHING THAT ZONE INDICATES STRENGTH.

APA ITU SNR + LIQUIDITY SWEEP?

LIQUIDITY SWEEP

➡ ARTINYA KETIKA HARGA NAIK MENYENTUH ATAU MENEMBUS HIGH SEBELUMNYA ATAU TURUN MENEMBUS LOW SEBELUMNYA UNTUK MEMICU PENDING ORDER ATAU STOP ORDER YANG MENUNGGU DI AREA TERSEBUT.

➡ TRADER SERING SALAH PAHAM BAHWA INI ADALAH "BREAKOUT SUPPORT ATAU RESISTANCE", TETAPI SEBENARNYA INI ADALAH STRATEGI YANG DIGUNAKAN SMART MONEY UNTUK MENGAMBIL LIKUIDITAS SEBELUM MENGERAKKAN HARGA KE ARAH YANG SEBENARNYA.

MENGGUNAKAN LIQUIDITY SWEEP DENGAN SNR

➡ KETIKA HARGA MENCAPAI AREA SNR (SUPPORT & RESISTANCE), BIASANYA TERDAPAT BANYAK ORDER YANG MENUNGGU.

➡ JIKA TERJADI LIQUIDITY SWEEP DI AREA INI, BERARTI MARKET SEDANG "MENGETES ZONA" DENGAN MENYAPU STOP LOSS TERLEBIH DAHULU SEBELUM BERBALIK.

CONTOH:

DI RESISTANCE: HARGA MENEMBUS KE ATAS UNTUK MENGAMBIL STOP BUY ORDER, LALU TURUN TAJAM → SINYAL SELL (SETUP SHORT).

DI SUPPORT: HARGA TURUN MENEMBUS UNTUK MENGAMBIL STOP SELL ORDER, LALU MEMANTUL KUAT → SINYAL BUY (SETUP LONG).

PENTINGNYA LIQUIDITY SWEEP DALAM MENGONFIRMASI SNR

➡ MENINGKATKAN AKURASI ENTRY — TIDAK SEMUA SENTUHAN SNR BERARTI REVERSAL, TETAPI JIKA ADA LIQUIDITY SWEEP YANG MENGONFIRMASI, TINGKAT KEBERHASILANNYA LEBIH TINGGI.

➡ MENUNJUKKAN ADANYA SMART MONEY — MENUNJUKKAN TEKANAN BELI/JUAL NYATA DARI BIG PLAYERS, BUKAN HANYA NOISE MARKET.

➡ MENGURANGI FALSE BREAKOUT — MEMBANTU MEMBEDAKAN APAKAH BREAK DI SUPPORT/RESISTANCE ITU BENAR ATAU HANYA LIQUIDITY GRAB.

RINGKASAN

SNR + LIQUIDITY SWEEP BUKAN HANYA MELIHAT SUPPORT DAN RESISTANCE. INI TENTANG MEMAHAMI "APA YANG DILAKUKAN MARKET DI BALIK LAYAR" — SIAPA YANG MENGUMPULKAN LIKUIDITAS — DAN MENGGUNAKAN ITU UNTUK MENENTUKAN APAKAH TREN SELANJUTNYA KEMUNGKINAN BERBALIK ATAU BERLANJUT.

WHAT IS SNR + LIQUIDITY SWEEP?

LIQUIDITY SWEEP

➡ A LIQUIDITY SWEEP OCCURS WHEN PRICE PUSHES ABOVE A PREVIOUS HIGH OR BELOW A PREVIOUS LOW TO TRIGGER PENDING ORDERS OR STOP-LOSS ORDERS POSITIONED IN THOSE AREAS.

➡ MANY TRADERS MISTAKE THIS MOVE AS A "BREAKOUT OF SUPPORT OR RESISTANCE," BUT IN REALITY, IT IS A SMART MONEY TACTIC USED TO COLLECT LIQUIDITY BEFORE MOVING PRICE IN THE TRUE INTENDED DIRECTION.

USING LIQUIDITY SWEEP WITH SNR

➡ WHEN PRICE APPROACHES A SUPPORT OR RESISTANCE LEVEL, THERE ARE USUALLY MANY ORDERS RESTING THERE.

➡ IF A LIQUIDITY SWEEP OCCURS AROUND THIS ZONE, IT SIGNALS THAT THE MARKET MAY BE "TESTING THE LEVEL" BY COLLECTING STOP-LOSS ORDERS BEFORE REVERSING.

EXAMPLES:

AT RESISTANCE: PRICE BREAKS ABOVE TO COLLECT BUY-STOP ORDERS, THEN DROPS SHARPLY → SELL SIGNAL (SHORT SETUP).

AT SUPPORT: PRICE BREAKS BELOW TO COLLECT SELL-STOP ORDERS, THEN BOUNCES STRONGLY → BUY SIGNAL (LONG SETUP).

IMPORTANCE OF LIQUIDITY SWEEP IN CONFIRMING SNR

➡ INCREASES ENTRY ACCURACY — NOT EVERY TOUCH OF SNR CREATES A REVERSAL, BUT WHEN A SWEEP CONFIRMS IT, THE PROBABILITY IS SIGNIFICANTLY HIGHER.

➡ REVEALS SMART MONEY INVOLVEMENT — SHOWS REAL BUYING/SELLING PRESSURE FROM LARGE PLAYERS, NOT JUST MARKET NOISE.

➡ REDUCES FALSE BREAKOUTS — HELPS IDENTIFY WHETHER A BREAK OF SUPPORT OR RESISTANCE IS GENUINE OR SIMPLY A LIQUIDITY GRAB.

SUMMARY

LIQUIDITY SWEEP + SNR IS NOT JUST ABOUT IDENTIFYING SUPPORT AND RESISTANCE LEVELS. IT IS ABOUT UNDERSTANDING THE INTENTION OF THE MARKET, WHO IS COLLECTING LIQUIDITY, AND USING THAT INFORMATION TO DETERMINE WHETHER THE NEXT MOVE IS LIKELY A REVERSAL OR CONTINUATION OF TREND.

CATATAN

LIQUIDITY SWEEP + SNR ADALAH PENYAPUAN TERHADAP HIGH ATAU LOW CANDLE SEBELUMNYA.

MENONFIRMASI SNR DENGAN LIQUIDITY SWEEP BERARTI KITA INGIN MELIHAT LIKUIDITAS DIAMBIL PADA HIGH ATAU LOW SEBELUMNYA KETIKA HARGA MENYENTUH SNR, YANG MENUNJUKKAN BAHWA:

- ➡ ZONA TERSEBUT SUDAH "DIUJI" OLEH MARKET.
- ➡ ADA KEMUNGKINAN BESAR SNR TERSEBUT AKAN BERTAHAN DAN TERJADI REVERSAL YANG VALID.

NOTE

LIQUIDITY SWEEP + SNR REFERS TO SWEEPING THE HIGH OR LOW OF THE PREVIOUS CANDLE.

CONFIRMING SNR WITH A LIQUIDITY SWEEP MEANS WE WANT TO SEE LIQUIDITY TAKEN FROM THE PREVIOUS HIGH OR LOW WHEN PRICE TAPS INTO THE SNR. THIS INDICATES:

- ➡ THE ZONE HAS BEEN TESTED.
- ➡ THERE IS A HIGH PROBABILITY THE ZONE WILL HOLD AND REVERSE.

1 SELLING

2 BUYING

CATATAN TAMBAHAN

JIKA ADA SUPPORT-RESISTANCE (SNR) YANG TERJADI BERSAMAAN DENGAN LIQUIDITY SWEEP DAN KEMUDIAN ADA CANDLE YANG MENYENTUH KEMBALI LEVEL SNR TERSEBUT, MAKA KITA DAPAT MENONFIRMASI BAHWA ZONA TERSEBUT SANGAT KUAT ATAU DENGAN KATA LAIN ZONA TERSEBUT VALID DAN KUAT.

ANOTHER NOTE

IF A SUPPORT/RESISTANCE ZONE OCCURS ALONG WITH A LIQUIDITY SWEEP AND LATER PRICE RETURNS TO TOUCH THE SAME ZONE, WE CAN CONSIDER THAT LEVEL AS HIGHLY RELIABLE — IN OTHER WORDS, A STRONG AND VALID ZONE.

SNR (SUPPORT & RESISTANCE)

MARKING SNR

USE THE CLOSING PRICE OF THE CANDLE.

1. FRESH VS UNFRESH

A ZONE IS CONSIDERED FRESH IF IT HAS NEVER BEEN TOUCHED.

IF TOUCHED BY A WICK → IT BECOMES UNFRESH.

IF BROKEN THROUGH BY A FULL CANDLE BODY → THE ZONE TURNS FRESH AGAIN.

A ZONE CAN BE USED NO MORE THAN 2 TIMES.

EXCEPTION: IF A DAILY GAP HAS CAUSED A STRONG REACTION BEFORE, THAT ZONE MAY BE REUSED WITHOUT THE 2-TIME LIMIT.

SIMPLE SUMMARY

FRESH = NEVER TOUCHED

UNFRESH = TOUCHED BY WICK

FULL BODY BREAK = ZONE BECOMES FRESH AGAIN

MAXIMUM 2 USES

STORYLINE (PRICE ACTION STRUCTURE)

PRICE TENDS TO TOUCH A FRESH ZONE AND THEN GET REJECTED WITH A WICK. THE LOWER TIMEFRAME (ONE LEVEL BELOW) MUST SHOW A CLEAR BREAKOUT (EXTERNAL BREAKOUT). AFTER THAT, PRICE MOVES FROM ONE FRESH ZONE TO ANOTHER (E.G. FROM DAILY TO DAILY, WEEKLY TO WEEKLY). BREAKOUT DOES NOT ALWAYS HAVE TO HAPPEN AT FRESH ZONES.

FOR WEEKLY STORYLINES, WATCH OUT FOR ROADBLOCKS FROM LOWER TIMEFRAMES (E.G., DAILY CAN BLOCK WEEKLY).

EXAMPLE: IF WEEKLY IS BULLISH BUT DAILY IS BEARISH, WEEKLY CANNOT CONTINUE UP UNTIL DAILY REVERSES TO BULLISH.

SIMPLE SUMMARY

CLEAR STORYLINE → REJECT FROM ZONE → BREAKOUT → MOVE TO NEXT ZONE. ALWAYS WATCH LOWER TIMEFRAME STORYLINES → THEY MAY CONFLICT.

ENTRIES

3.1 HIGH RISK ENTRIES

3.1.1 THE "50 METHOD"

EXAMPLE: PRICE TOUCHES A DAILY ZONE → THEN USE MULTI-TIMEFRAME (E.G., H1 / M15) → SET STOP LOSS AROUND 10 PIPS.

CORRECT WAY:

THE DIRECTION MUST ALIGN WITH THE HIGHER STORYLINE (E.G., WEEKLY).

IF WEEKLY IS BULLISH → LOOK FOR BUY ENTRIES AT DAILY ZONES THAT SUPPORT THE WEEKLY DIRECTION.

SNR (SUPPORT & RESISTANCE)

MENAMPAK SNR

GUNAKAN HARGA PENUTUPAN (CLOSING) DARI CANDLE.

1. FRESH VS UNFRESH

Sebuah zone dianggap fresh jika belum pernah disentuh.

Jika tersentuh oleh wick → menjadi unfresh.

Jika ditembus oleh full body candle → zone menjadi fresh kembali.

Satu zone hanya bisa digunakan maksimal 2 kali.

Pengecualian: Jika pernah terjadi daily gap yang menghasilkan reaksi kuat sebelumnya, maka zone itu dapat digunakan kembali tanpa batas 2 kali pemakaian.

RINGKASAN SINGKAT

FRESH = Belum pernah disentuh

UNFRESH = Tersentuh wick

FULL BODY BREAK = Zone menjadi fresh lagi

MAKSIMAL PEMAKAIAN 2X

STORYLINE (STRUKTUR PRICE ACTION)

Harga cenderung menyentuh zone fresh dan kemudian rejected oleh wick. Timeframe yang lebih rendah (satu level di bawah) harus menunjukkan breakout yang jelas (external breakout). Setelah itu, harga bergerak dari satu fresh zone ke fresh zone lain melalui dari daily ke daily, weekly ke weekly.

Breakout tidak harus selalu terjadi di fresh zone.

Untuk storyline weekly, perhatikan hambatan dari timeframe yang lebih rendah contoh: daily bisa menghalangi arah weekly.

Contoh: Jika weekly bullish tetapi daily bearish, maka weekly tidak bisa lanjut naik sampai daily berubah menjadi bullish.

RINGKASAN SINGKAT

Storyline jelas → Reject dari zone → Breakout → Bergerak ke zone berikutnya

Selalu perhatikan storyline di timeframe bawah → bisa terjadi konflik arah.

ENTRIES

3.1 (HIGH) RISK ENTRIES

3.1.1 METODE "50"

Contoh: Harga menyentuh daily zone → lalu gunakan multi-timeframe contoh: H1 / M15 → set stop loss sekitar 10 pips.

Cara yang benar

Arah entry harus sesuai dengan storyline timeframe yang lebih tinggi (contoh: weekly).

Jika weekly bullish → cari peluang buy di daily zone yang sesuai dengan arah weekly.

WHAT IS UNFRESH / FRESH?

Unfresh SNR = A support or resistance level that has already been touched.
If the level is broken by a full candle body, it becomes fresh again.
Each level can only be used up to two times.
If the level is a daily gap that created a strong reaction previously, it may be reused without following the "two-use only" rule.

A level is considered fresh until it gets touched.
If it is touched by a wick, it becomes unfresh.

Fresh SNR = A support or resistance level that has not been touched yet (still fresh).

Unfresh SNR = Support/Resistance yang sudah pernah disentuh.
Jika ditembus oleh candle body, level tersebut menjadi fresh kembali.
Setiap level hanya boleh digunakan maksimal 2 kali.
Jika level berupa daily gap yang sebelumnya memberikan reaksi kuat, maka level tersebut boleh digunakan kembali tanpa mengikuti aturan "maksimal 2 kali".

BUYING

The same logic applies to the sell-side as well.

In summary:

Unfresh SNR → The level has already been used.

Fresh SNR → The level has not been used yet.

Level dianggap fresh sampai level tersebut disentuh.
Jika disentuh oleh wick, level menjadi unfresh.

Fresh SNR = Support/Resistance yang masih fresh (belum pernah disentuh).

BUYING

Singkatnya:

Unfresh SNR = Level sudah pernah digunakan.

Fresh SNR = Level belum pernah digunakan.

Sisi sell-side juga bekerja dengan cara yang sama.

FRESH AND UNFRESH SNR LEVELS

◆ FRESH SNR VS UNFRESH SNR

Fresh SNR = Level yang belum pernah ditembus oleh candle sebelumnya. Jika level ditembus oleh candle body, level tersebut tetap dianggap fresh.

Unfresh SNR = Level yang sudah pernah disentuh atau ditembus oleh wick sebelumnya.

Kenapa fresh SNR lebih penting?

Karena level ini adalah area di mana institusi biasanya menggunakan likuiditas, dan harga sering memantul kembali dari level ini.

Pengamatan Sederhana:

Jika harga hanya menyentuh wick dan memantul → Masih valid

Jika harga menyentuh candle body → Tidak valid

◆ PERGERAKAN HARGA

Harga biasanya bergerak dari level fresh pada timeframe lebih tinggi (HTF) ke level fresh lainnya di sisi berlawanan.

Dalam perjalanan, harga dapat mematahkan swing high/low di timeframe lebih rendah (LTF), tetapi akhirnya harga akan mencapai sisi lain dari level fresh HTF tersebut.

◆ VALIDASI SNR

Untuk memastikan level SNR dapat dipertagangkan, cek:

1. Harga menyentuh wick/shadow
2. Likuiditas sudah diambil (liquidity sweep)
3. Harga berada dalam zona konsolidasi

Jika ketiga syarat terpenuhi, maka level tersebut dianggap valid untuk buy atau sell.

FRESH SNR VS UNFRESH SNR

Fresh SNR = A level that has not been broken by a candle before. Even if the level is tapped or broken by a wick, it is still considered fresh unless the candle body breaks it.

Unfresh SNR = A level that has already been touched or broken by a wick or candle body before.

Why is Fresh SNR more important?

Because it represents a point where institutional orders are often placed, meaning liquidity is present — price frequently reacts or bounces strongly from fresh levels.

Simple Observation:

If price touches the wick and bounces → still valid

If price touches the candle body → not valid anymore

PRICE MOVEMENT

Price generally moves from one fresh level on a higher timeframe (HTF) to another fresh level on the opposite side.

Along the movement, price may break swing highs/lows on lower timeframes (LTF) but eventually it will gravitate towards the next fresh HTF level.

SNR VALIDATION CHECKLIST

To confirm whether an SNR level is tradable, make sure:

1. Price has tapped the wick/shadow
2. Liquidity has been collected (liquidity sweep)
3. Price is located in a congestion or reaction zone

If all three conditions are met, the level is considered valid for buying or selling.

PENTING

Ketika harga melakukan rejection pada fresh support (SNRL) maka entry buy masih valid selama harga closing berada di atas batas bawah (LLI).
Jika candle closing di bawah batas bawah, maka setup ini langsung kehilangan validitas.

IMPORTANT

When price rejects from a fresh support level (SNRL) a buy entry is still valid as long as the candle closes above the lower limit (LLI).
If price closes below the lower limit, the setup immediately becomes invalid and loses credibility.

Prinsip RBS (Resistance Becomes Support)

Setelah harga menembus level resistance, resistance tersebut sering berubah fungsi menjadi support baru, yang bisa digunakan sebagai area entry buy.

RBS PRINCIPLE (Resistance Becomes Support)

Once price breaks above a resistance level, that resistance often flips into a new support zone.

This newly formed support can then be used as a buy entry point.

HERE IS A REAL MARKET EXAMPLE Berikut contoh dari chart real di market:

- 1 = Titik asal SNR (Resistance)
- 2 = Rejection pertama (Resistance lemah)
- 3 = Rejection kedua (Resistance lemah)
- 4 = Rejection dari support kuat (digunakan untuk entry langsung)
- 1 = Original SNR (Resistance)
- 2 = First rejection (weak resistance)
- 3 = Second rejection (weak resistance)
- 4 = Rejection from strong support (used for a direct entry)

Chart menunjukkan pergerakan:

✓ Uptrend dengan jeda sebelum melanjutkan kenaikan.

Price structure shows an uptrend with a pause before continuation, confirming market strength.

Hal penting yang perlu diketahui:

Gap SNR biasanya berasal dari candlestick momentum yang kuat, yang menunjukkan tekanan beli atau jual yang jelas.

Contohnya akan dijelaskan di chart berikutnya.

KEY NOTE

A gap SNR typically forms from a strong momentum candle, indicating clear buying or selling pressure from institutional participants.

We will review a visual example of this in the next chart.

Sebuah candlestick bullish yang cukup kuat untuk menembus resistance lemah akan membentuk struktur market baru dengan mengubah resistance lama menjadi support yang kuat (RBS) setelah breakout.

FLIPZONE

A strong bullish candlestick that breaks a weak resistance level creates a new market structure, turning the previous resistance into a solid support (RBS) after the breakout.

This zone is known as the Flipzone.

WHAT IS RBS / SBR IN TRADING

@abayfores

APA ITU RBS/SBR?

Aku punya contoh nyata dari trading-ku sendiri untuk menunjukkannya padamu.

WHAT IS RBS/SBR?

Here are real examples from my own trading to help you understand.

RBS (Resistance Becomes Support)

- Apa itu RBS? - Level resistance sebelumnya berubah menjadi support
 - Terjadi ketika harga menembus resistance dan mencoba turun kembali, namun resistance lama berubah menjadi support
 - Tips trading: Kamu bisa menunggu untuk entry buy (long) di area RBS karena zona ini sering bereaksi dengan mendorong harga naik kembali
- RBS (Resistance Becomes Support)

- What is RBS? - A previous resistance level turns into support.
- It happens when price breaks above resistance and pulls back, but the old resistance now holds as support.
- Trading Tip: You can wait to enter a long position at the RBS zone because this area often reacts by pushing price back up.

SBR (Support Becomes Resistance)

- Apa itu SBR? - Level support sebelumnya berubah menjadi resistance
 - Terjadi ketika harga menembus support dan mencoba naik kembali, namun support lama berubah menjadi resistance
 - Tips trading: Kamu bisa menunggu untuk entry sell (short) di area SBR karena zona ini sering bereaksi dengan mendorong harga turun kembali
- SBR (Support Becomes Resistance)

- What is SBR? - A previous support level turns into resistance.
- It happens when price breaks below support and then pulls back, but the old support now acts as resistance.
- Trading Tip: You can wait to enter a short position at the SBR zone because this area often reacts by rejecting the price and pushing it back down.

RBS (Resistance Becomes Support)

- RBS adalah kondisi ketika level resistance sebelumnya berubah menjadi support setelah harga berhasil menembus dan close di atas level tersebut.
- Area ini biasanya menjadi tempat buyer kembali masuk saat harga melakukan retest.

RBS (Resistance Becomes Support)

- RBS occurs when a previous resistance level turns into support after price successfully breaks above and closes above that level.
- This area often becomes an entry point for buyers during a retest, as price tends to bounce from it.

SBR (Support Becomes Resistance)

- SBR adalah kondisi ketika level support sebelumnya berubah menjadi resistance setelah harga berhasil menembus dan close di bawah level tersebut.
- Area ini sering menjadi titik masuk seller saat harga melakukan retest kembali ke level tersebut.

SBR (Support Becomes Resistance)

- SBR happens when a previous support level turns into resistance after price breaks below and closes beneath the level.
- During a retest, sellers often step in, causing price to reject and move downward.

CE (Concept Explanation)

RBS dan SBR terjadi karena perubahan sentimen dan dominasi pasar. Ketika harga berhasil melewati level penting, ini menunjukkan bahwa salah satu pihak (buyer atau seller) lebih kuat.

Saat harga kembali menguji area tersebut (retest), trader yang menunggu konfirmasi biasanya masuk posisi, sehingga level tersebut menjadi support atau resistance baru.

CE (Concept Explanation)

RBS and SBR are driven by market psychology and the shift in control between buyers and sellers. A breakout indicates that the dominant side has taken over.

When price returns to the level it tested, many traders who missed the breakout enter positions, reinforcing that area as the new support or resistance.

Contoh Penjelasan

Jika XAU/USD menembus level \$2.400 (resistance lama) dan kemudian retest level tersebut dengan minimal candlestick rejection bullish, maka area tersebut berubah menjadi RBS.

Trader dapat membuka buy di sekitar \$2.400 dengan stop-loss sedikit di bawahnya.

Example Explanation

If XAU/USD breaks above \$2,400 (previous resistance) and then retests the level while showing bullish rejection candles, the level now acts as RBS.

Traders may look for long entries around \$2,400 with stop-losses placed slightly below the line.

Catatan Tambahan

- Semakin tinggi timeframe misalnya H4 atau Daily, semakin kuat validitas RBS/SBR.
- Menunggu retest + sinyal konfirmasi meningkatkan winrate.
- RBS/SBR lebih efektif jika digunakan bersama konsep lain seperti liquidity, order block, bias, dan fair value gap.

Extra Notes

- Higher timeframes (such as H4 or Daily) give stronger and more reliable RBS/SBR levels.
- Waiting for a clear confirmation signal + retest increases trade accuracy.
- RBS/SBR works even better when combined with concepts like liquidity, order blocks, bias, and fair value gaps.

QM (Quasimodo) — The Point Where the Market Traps the Majority

Ketika kita membahas "QM" atau "Quasimodo", banyak trader mengenalinya dari konsep Smart Money.
Pola ini adalah salah satu pola paling efektif untuk mengidentifikasi area pembalikan harga (reversal) dengan akurasi tinggi.

Hal menarik dari QM adalah bukan hanya memberi tanda kapan harga akan berbalik — tetapi juga menunjukkan di mana mayoritas trader terpiu oleh market.

When we talk about "QM" or "Quasimodo," many traders recognize it from Smart Money concepts.
The QM pattern is one of the most powerful structures for identifying high-probability reversal zones.

What makes QM unique is that it doesn't just signal a potential reversal — it also shows where the market tricks most traders into taking the wrong side.

Rangkaian seperti ini:

Saat market sedang naik uptrend, kebanyakan trader percaya harga akan terus naik.

Harga terus mencetak Higher High (HH) satu per satu, membuat trader semakin yakin arah masih bullish.

Namun tiba-tiba harga jatuh tajam dan menembus support sebelumnya — yang dulu menahan harga.

Lalu, saat harga naik kembali untuk retest...
Ia menyentuh zona yang sama dan kemudian berbalik lagi.
Inilah yang disebut QM Level.
Think of it like this:

During an uptrend, most traders believe the price will keep going higher.
Price continues to create Higher Highs (HH), building confidence that the trend is still strong.

But suddenly, the price drops sharply and breaks below a support level that previously held.
Then, when the price climbs back to retest that same level...

It rejects and reverses again —
That retest zone becomes the QM level.

Singkatnya:

QM adalah area di mana market sengaja menipu mayoritas trader agar masuk posisi ke arah yang salah.
Namun jika kamu paham struktur ini, kamu bisa melihat peluang entry lebih awal dibanding trader lain.
In simple terms:

QM is a trap zone — where the market convinces most traders to enter in the wrong direction.
But if you understand the structure, you'll spot the reversal opportunity before everyone else.

Struktur QM — Cara Termudah Memahaminya

Tidak perlu menghafal terlalu banyak.
Cukup pahami urutan ini:

QM Structure — Made Simple

No need to memorize too much.
Just follow this sequence:

◆◆ Bearish QM (Setup Sell)

1. Harga terus naik → membentuk Higher High (HH)
2. Terjadi pullback → terbentuk Higher Low (HL)
3. Harga naik lagi tetapi lebih lemah, lalu turun dan break HL → struktur mulai berubah
4. Harga retest kembali ke area yang sama → ini adalah titik entry SELL

◆◆ Bearish QM (Sell Setup)

1. Price continues rising → forms a Higher High (HH)
2. Price pulls back → forms a Higher Low (HL)
3. Price rises again but with weaker momentum and then breaks below the HL → structure shift begins
4. Price returns to retest the same area → this becomes the Sell Entry Zone

◆◆ Bullish QM (Setup Buy)

1. Harga terus turun → membentuk Lower Low (LL)
2. Terjadi pullback → terbentuk Lower High (LH)
3. Harga turun lagi tetapi gagal membuat LL baru, lalu naik kuat dan break LH → struktur mulai shift
4. Saat harga pullback kembali ke area itu → ini titik entry BUY

◆◆ Bullish QM (Buy Setup)

1. Price keeps falling → forms a Lower Low (LL)
2. Price pulls back → forms a Lower High (LH)
3. Price drops again but fails to create a new LL, then pushes strongly upward and breaks above the LH → structure shift begins
4. When the price pulls back to retest the same zone → that becomes the Buy Entry Zone

What Is QM? What Does It Include?

QMR (Quasimodo Reversal)

➤ "Pola pembalikan paling menipu dalam pergerakan harga."

Ketika market bersiap untuk berubah arah, harga tidak langsung berbalik begitu saja. Biasanya market membuat gerakan palsu terlebih dahulu — membuat trader percaya bahwa tren masih berlanjut.

Lalu tiba-tiba harga berbalik dengan kuat dari arah yang tidak terduga.

Momen inilah yang disebut QMR atau Quasimodo Reversal.

QMR (Quasimodo Reversal)

➤ "One of the most deceptive reversal patterns in price action."

When the market is preparing to reverse, it rarely turns immediately. Instead, it often creates a fake continuation move — making traders believe the trend will keep going.

Then, out of nowhere, price sharply reverses and shifts direction.

That moment is what we call QMR — the Quasimodo Reversal.
Apa yang Terjadi Saat QM Terhentuk?

QM adalah struktur pembalikan harga yang muncul ketika tren besar mulai melemah.

Strukturanya biasanya terlihat seperti ini:

Dalam uptrend: HH → HL → LH → lalu break ke LL

Dalam downtrend: LL → LH → HL → lalu break ke HH

Sederhananya:

Harga sudah masih mengikuti arah sebelumnya, namun tiba-tiba struktur patah dan arah berganti.

Ini sering terjadi karena pelaku besar ingin menjebak trader agar masuk ke arah yang salah — kemudian membalikkan market dengan cepat.

How Does QM Form?

A QM structure appears when a major trend is losing strength. It typically follows this pattern:

In an uptrend: HH → HL → LH → then breaks into LL

In a downtrend: LL → LH → HL → then breaks into HH

In simple terms:

Price pretends to continue the trend, then suddenly breaks structure and shifts direction — trapping traders in the wrong position.

This behavior often reflects how smart money manipulates the market, causing retail traders to enter the wrong side before the reversal begins.

Bagaimana Cara Menggunakannya untuk Entry?

Setelah pola QM selesai terbentuk, biasanya harga akan:

1. Break struktur (BOS)

2. Kembali retest ke level yang sama

3. Baru bergerak mengikuti arah reversal

Retest inilah yang menjadi entry paling aman, karena:

- ✓ risiko lebih kecil
- ✓ konfirmasi lebih jelas
- ✓ momentum reversal sudah muncul

Kesalahan Trader Pemula

Banyak trader masuk terlalu cepat — mereka melihat sedikit fake move lalu langsung entry, dan akhirnya terkena stop out.

Trader yang memahami QM akan menunggu:

- "Biarlah harga break dulu — baru entry saat retest.
- Tidak perlu kejar harga. Tidak perlu tertipu-hum."

How to Trade It

After a QM forms, you will usually see:

1. A structure break (BOS)

2. Price returning for a retest of the same level

3. A clear rejection confirming the reversal

The retest zone is considered the best entry point because it offers:

- ✓ lower risk
- ✓ clear confirmation
- ✓ better probability of success

Common Mistake

Most traders enter too early — they see a small move and assume the trend has reversed, only to be stopped out.

A trader who understands QM waits patiently:

- "Let the break happen first — then enter on the retest."
- No chasing. No chasing.

Ringkasan Penting

QM = struktur reversal setelah tren besar

Pola urutan umumnya: HH → HL → LH → LL

Jangan entry pada fake move → tunggu break → entry di retest

Quick Summary

QM = a reversal structure after a major trend

Typical bearish pattern: HH → HL → LH → LL

Don't enter during the fake move → wait for the break and retest

Inti Konsep

Jika kamu benar-benar memahami QM, kamu akan mulai bisa membedakan:

- 🔥 Mana pergerakan palsu (fakeout) vs
- 🔥 Mana pembalikan tren yang nyata

Karena dalam hampir semua reversal besar, pola ini digunakan oleh smart money.

Ingat satu aturan penting:

- Fake move selalu muncul terlebih dahulu — baru pergerakan real terjadi setelahnya.

Key Idea

Once you fully understand QM, you'll begin to see whether the market is creating a fake continuation or a true reversal.

Almost every major reversal uses this pattern because it allows big players to trap liquidity before moving price.

Always remember:

- The fake move happens first — then the real move follows.

QMM (Quasimodo Manipulation)

QMM atau Quasimodo Manipulation adalah fase di mana market pura-pura menembus level kunci (QML) untuk menjebak mayoritas trader, sebelum akhirnya bergerak kembali ke arah sebenarnya.

Ini adalah gerakan harga yang dibuat oleh smart money untuk membersihkan posisi yang berlawanan sebelum melanjutkan arah utama.

Singkatnya:

» "Market harus mengambil stop-loss trader lain sebelum lanjut bergerak."

QMM or Quasimodo Manipulation is the phase where the market pretends to break a key level (QML) to trap most traders before reversing back in the true direction.

It's a price behavior purposely created by smart money to trigger stop-losses and clear liquidity from the opposite side before continuing.

Simply put:

» "The market takes out other traders' stops before making the real move."

Cara Mula Mula Mengenal QMM

Pada kondisi normal, QML berfungsi sebagai support atau resistance yang jelas.

Namun dalam QMM:

1. Harga menembus level QML secara palsu — terlihat seperti breakout sesungguhnya.

2. Lalu harga kembali masuk ke area sebelumnya dan melanjutkan arah asli.

Ini adalah momen ketika grafik menipu mata trader, membuat mereka percaya breakout telah terjadi — padahal smart money masih memegang kendali.

How to Recognize QMM

Under normal conditions, the QML acts as a clear support or resistance level.

But during a QMM:

1. Price fakes a break above or below the QML, making it look like a valid breakout.

2. Then, price returns back inside the range and continues in the original direction.

This is the moment when the chart tricks your eyes into believing a breakout has happened — while in reality, smart money remains fully in control.

Contoh Break di Atas QML yang Terjadi

- Ketika QML berperan sebagai resistance.
- Ketika harga break di atasnya, terlihat seperti telah terjadi breakout.
- Namun setelah itu, harga akan turun kembali — ini adalah QMM break yang palsu.

Contoh QMM Scenarios

- In the beginning, the QML acts as resistance.
- Price breaks above it, appearing like a bullish breakout.
- Then price drops sharply back below — this confirms a bearish QMM.

Ringkasan Utama

QMM = Fake break di atas atau bawah QML untuk membersihkan stop sebelum bergerak ke arah yang benar.

Berfungsi untuk memastikan ke mana smart money akan membawa market.

Memberikan entry yang jauh lebih aman dibandingkan hanya menembak support atau resistance biasa.

In Short:

QMM = a fake breakout above or below the QML, designed to remove liquidity before the real move happens.

It helps confirm which side smart money is aligned with.

It offers a safer entry point compared to guessing standard support or resistance levels.

Kadang, harga tidak kembali retest QML, tetapi langsung bergerak jauh. Jika ini terjadi, artinya tekanan arah trend sangat kuat — smart money sedang mendorong harga lebih cepat.

Trader yang memahami struktur ini akan menunggu harga kembali ke area QMM jika terjadi retest. Area tersebut menjadi titik entry low risk dan high probability, karena market sudah menunjukkan niat sebenarnya.

In some cases, price may not retest the QML again and simply continues moving in the real direction. When this happens, it signals strong momentum — meaning smart money is accelerating price.

Traders who understand QMM will usually wait for a retest of the QMM zone when it occurs. That retest often becomes a high-probability, low-risk entry, because the chart has already revealed its true intention.

QMC adalah kondisi ketika market seolah-olah menunjukkan bahwa tren akan berlanjut...
Namun kenyataannya, market hanya menjebak likuiditas sebelum melanjutkan arah yang sebenarnya.

Ini adalah struktur yang menunjukkan bahwa pelaku besar (smart money) sedang menggeser posisi — dan kita bisa menjadikannya sebagai entry dengan akurasi tinggi, karena entry dilakukan setelah market menjebak mayoritas trader dan mengambil likuiditas mereka terlebih dahulu.

Singkatnya:

> QMC = fake move sebelum pergerakan utama + entry retest yang bersih.

QMC is the moment when the market acts like the trend will continue, but in reality, it's only collecting liquidity before moving in the real direction.

This structure shows that smart money is shifting position, and it can be used as a high-accuracy entry signal, because the entry happens after the market has already trapped traders and taken out stop-losses.

Simply put:

> QMC = a fake continuation move + a clean retest entry.

Core Idea

QMC represents the smart money tactic of creating a fake continuation before the true directional move starts.
Waiting for the break + retest offers a far safer and more reliable entry than chasing normal support or resistance levels.

Mindset Penting

Ingat: market biasanya bergerak kuat setelah mayoritas trader menyerah.

Market harus:

membersihkan posisi yang salah dulu

membuat trader kehilangan kepercayaan

menciptakan ilusi bahwa harga tidak akan bergerak lagi

Dan ketika semua orang mulai berpikir:

> "Kayaknya market sudah selesai... gak gerak lagi."

Isim di saat itulah pergerakan sebenarnya dimulai.

Important Mindset

The market usually moves strongly only after most traders have given up.

It must:

stop on the wrong side

create doubt

make traders believe nothing will happen

And exactly when everyone thinks:

> "It's probably not going anywhere..."

Struktur Pola QMC

Struktur keseluruhan biasanya terlihat seperti ini:

Structural Pattern of QMC

The pattern usually follows this sequence:

Dalam Uptrend:

1. Market membentuk Higher High (HH)
2. Harga retrace membentuk Higher Low (HL)
3. Harga kembali naik untuk membuat fake HH (beberapa trader menjualnya liquidity grab atau fake wick)
4. Setelah itu, harga turun dan break HL — ini tanda awal pembalikan

In an Uptrend:

1. Price forms a Higher High (HH)
2. Pulls back to form a Higher Low (HL)
3. Pushes up again to create a fake HH (also known as a liquidity grab or fake wick)
4. Then price drops and breaks the HL, signaling a shift in structure

Dalam Downtrend:

1. Market membentuk Lower Low (LL)
2. Harga retrace dan membentuk Lower High (LH)
3. Harga turun lagi untuk membuat fake LH
4. Lalu harga naik kuat dan break LH — trend mulai berbalik

In a Downtrend:

1. Price forms a Lower Low (LL)
2. Pulls back to form a Lower High (LH)
3. Pushes down again to create a fake LH
4. Then rallies up and breaks the LH confirming the trend reversal

Poin Utama

Selalu ada fake move atau liquidity grab sebelum pergerakan sebenarnya dimulai. Itulah yang menjebak trader di arah yang salah, lalu market bergerak ke arah sebenarnya setelah stop mereka diambil.

Key Principle

There must always be a fake move or liquidity grab before the real move begins.
This is what traps traders on the wrong side and clears liquidity before smart money commits.

Ini lah inti dari konsep QM & QMC.

Contoh Nyata Pola Quasimodo — atau yang kita sebut “QM”

Ini adalah contoh chart nyata di mana pola QM terbentuk dengan sangat jelas.
Kita bisa melihat urutan klasiknya muncul tepat di depan mata:

Pergerakan kuat naik atau turun → Break of Structure → harga melakukan retest ke zona QM → kemudian berbalik arah dengan kuat.

Inilah yang menjelaskan bahwa QM bukan sekadar “pola buku teks”,
melainkan perilaku market yang benar-benar terjadi dan sering dimanfaatkan oleh smart money.

Real Example of the Quasimodo Pattern — What We Call “QM”

This is a real chart where the QM pattern formed clearly.
You can see the classic sequence unfold right in front of you:

A strong move up or down → a Break of Structure → a retest back to the QM zone → followed by a sharp reversal in the opposite direction.

This proves that QM isn't just a “textbook pattern” —
it's real market behavior that smart money uses repeatedly.

Q1 Line Chart

Diagram garis menunjukkan struktur dasar pola QM:
lower low yang diikuti higher high lalu terbentuk “shoulder” sebelum harga
berbalik.

Q1 Line Chart

The line chart illustrates the basic structure of a QM pattern:
a lower low followed by a higher high, then the formation of the “shoulder” before
price reverses.

Q1 Candlestick Chart

Pada chart candlestick, area ini menandai zona QM tempat harga
melakukan retest
sebelum terjadi reversal signifikan.

Q1 Candlestick Chart

In the candlestick chart, the highlighted area shows the QM zone where
price retests
before making a significant reversal.

Akhir Materi Quasimodo

Bagian ini menutup pembahasan tentang pola Quasimodo (QM) —
sebuah pola yang membantu kita memahami bagaimana
market benar-benar bergerak.

Memahami QM bukan hanya mengenali bentuknya,
tetapi melihat perubahan kendali market,
moment ketika smart money mulai mengambil alih,
dan bagaimana retail trader sering terjebak di sisi yang salah.

Kuasi penguasaan konsep ini,
dan kita akan mulai melihat market dengan cara yang
jauh lebih jelas dan berbeda.

End of Quasimodo Content

This concludes the section on the
Quasimodo (QM) pattern —
a pattern that reveals how the market
truly behaves.

Understanding QM is not just about
recognizing its shape,
but about identifying the shift in market
control,
the moment smart money steps in,
and how the crowd gets trapped on the
wrong side.

Master this concept,
and you'll start to see the market with a
completely new level of clarity.

Why Is QM So Accurate?

Because it comes from a real shift in market control.

When price breaks structure (Break of Structure), that's the moment when the opposite side begins taking control.

And when price pulls back to retest the same area (the QM Zone), that's where major players — the smart money — add more positions.

Most traders don't understand this, which is why they often end up trapped on the wrong side of the move.

Mengapa QM Sangat Akurat?

Karena QM berasal dari perubahan nyata dalam kendali market.

Saat harga melakukan break of structure (BOS) itulah momen ketika sisi yang berlawanan mulai mengambil alih permainan.

Dan ketika harga kembali retest ke area yang sama (zona QM) itulah titik di mana pemain besar — smart money — menambah posisi.

Banyak trader tidak memahami proses ini, sehingga sering terjebak di sisi yang salah.

Key Points to Pay Attention To

- A true QM must be formed by a real Break of Structure — not just random fluctuations.
- If price returns to the zone too quickly or without a strong confirmation candle like an engulfing or pin bar, be cautious.
- Always check the higher-timeframe context to understand the main trend before taking any trade.

Poin Penting yang Harus Diperhatikan

- QM yang valid harus memiliki break of structure yang jelas, bukan hanya gerakan naik-turun acak.
- Jika harga kembali ke zona terlalu cepat atau tanpa konfirmasi candle yang kuat seperti engulfing atau pin bar, kamu harus berhati-hati.
- Selalu cek konteks pada timeframe yang lebih tinggi untuk mengetahui arah tren utama sebelum mengambil keputusan.

My Perspective on QM

QM is not always a "reversal signal" — it's the moment when the market begins to hesitate.

Many traders see a Break of Structure and immediately think, "This is QM!"

But a real QM forms when the market becomes uncertain — unsure whether it should continue or reverse.

That's why our job is to wait for proper confirmation instead of rushing in without analyzing candle strength and the broader structure.

Impatient traders often fail here, because QM can make them believe,

"Price is definitely reversing."

while in reality the market might just be taking a short pause before continuing its trend.

Mindset Saya Tentang QM

QM bukan selalu titik reversal — melainkan momen ketika market mulai ragu dan kehilangan momentum.

Banyak trader melihat BOS lalu langsung berpikir, "Ini QM!"

Padahal QM yang sebenarnya muncul saat market berada di fase ketidakpastian — tidak yakin apakah akan melanjutkan tren atau berbalik arah.

Karena itu, tugas kita adalah menunggu konfirmasi, bukan terburu-buru masuk tanpa melihat kekuatan candle dan struktur besar.

Trader yang tidak sabar sering melewatkan hal ini, karena QM bisa menipu dan membuat mereka berpikir,

"Pasti reversal."

padahal kenyataannya market hanya mengambil napas sebelum melanjutkan pergerakannya.

WHAT IS OC/OCL

@ahayforex

What Is OCL and How to Use It

OCL, atau Open-Close Level, adalah zona harga yang diambil dari harga open dan close sebuah candlestick.

Banyak trader ketika mencari Support & Resistance (SNR) hanya fokus pada shadow/wick. Padahal harga open dan close justru menunjukkan di mana market benar-benar menerima harga tersebut.

Harga close memberi tahu di mana market akhirnya menyepakati harga pada sesi ini, dan harga open candle berikutnya menunjukkan dari mana tekanan baru mulai terbentuk. Inilah alasan mengapa zona OCL sering lebih akurat daripada hanya menarik garis pada wicks. OCL, or Open-Close Level, is a price zone created from the open and close of a candle.

Most traders look for Support and Resistance (SNR) by focusing on the wicks. But the open and close prices reveal where the market actually accepted the price.

The close tells you where the market finally agreed during that session, and the next candle's open often shows where new pressure begins. That's why OCL zones are often more reliable than drawing lines based only on wicks.

Cara Menemukan OCL

Untuk menemukan OCL, cari candle penting seperti:

Breakout

Reversal kuat

Tandai harga close-nya, dan terkadang sertakan juga harga open candle berikutnya. Area tersebut menjadi zona OCL.

Jika harga menembus OCL dan close di atas/bawah zona, itu tanda bahwa market memiliki kekuatan untuk menggeser struktur.

Saat harga kembali retest OCL, itulah biasanya titik entry yang lebih aman dan bersih.

How to Identify an OCL

To find an OCL, look for key candles such as:

A breakout candle

A strong reversal candle

Mark the close price, and sometimes also the open of the next candle. This area becomes your OCL zone. If price breaks through the OCL and closes beyond it, that signals the market has enough strength to shift structure. When price retests the OCL, it often provides a cleaner and safer entry point.

LTF

HTF

Timeframe yang Bisa Dipakai

Kami bisa menerapkan OCL di semua timeframe, namun timeframe besar seperti H4 atau Daily cenderung memberi sinyal yang lebih kuat dan lebih jelas.

Cobalah menggabungkan OCL dengan tools lain seperti: Trendline, Fibonacci, Market Structure. Akurasi dan kepercayaan diri kami biasanya akan meningkat drastis.

Which Timeframes Work Best

You can use OCL on any timeframe, but higher timeframes like H4 or Daily tend to give stronger and clearer signals.

Try combining OCL with other tools such as:

Trendlines

Fibonacci

Market Structure

You'll notice your accuracy and confidence improve significantly.

Contoh Tambahan di LTF

Pada contoh LTF, kami bisa melihat kombinasi:

Fair Value Gap (FVG)
Resistance
Retest
Timezones (New York / London)

Ketika support atau resistance bertumpuk dengan FVG, zona tersebut menjadi jauh lebih kuat.

Additional Example on LTF

In the LTF example, you can see the combination of:

Fair Value Gap (FVG)
Resistance
Retest

Key timezones (New York / London)

When a support or resistance level overlaps with an FVG, the zone becomes much stronger.

→ Penting

OCL dapat membantu kita mengambil entry selama sesi New York atau London, yang biasanya memberikan zona yang lebih kuat dan momentum lebih besar dibandingkan sesi Asia. Jika OCL terbentuk saat sesi London/New York, zona tersebut cenderung lebih valid dan memiliki kemungkinan lebih kecil untuk terjadi fake breakout.

→ IMPORTANT

An OCL formed during the New York or London sessions often gives us stronger zones and better momentum compared to the Asian session. If the OCL is created during the London/New York overlap, it tends to be more reliable with a lower chance of being fake-broken.

Contoh 1 & 2

OCL pada area atas menunjukkan zona potensial untuk mencari sell setelah harga menembus kembali level tersebut. Zona ini biasanya terbentuk dari:

Rejection kuat pada sesi akhir

Break of Structure

Retest kembali ke OCL, sebelum harga lanjut

Kamu juga bisa menggunakan Fibonacci untuk mengukur level entry yang lebih presisi, meski ini bukan aturan wajib — hanya sebagai alat tambahan.

Contoh 1 & 2

The OCL at the top creates a potential sell zone once price returns to it. This type of zone usually forms from:

A strong rejection during an active session

A Break of Structure

A clear retest back to the OCL before price drops

You can also use Fibonacci to refine your entry levels, but it's not a strict rule — simply an additional tool to improve precision.

Contoh 1

OCL terbentuk dengan zona SNR dan menghasilkan area rejection yang kuat. Ketika harga kembali menembus OCL, we akan mendapatkan konfirmasi. Ini adalah peluang entry yang baik karena setelah harga menembus area.

Example 1

First, the OCL overlaps with a support/resistance zone, creating a strong rejection area. When price revisits the OCL with clear confirmation, it becomes a safer entry point before the market continues its trend.

Contoh 2

Pada contoh ini, OCL berperan sebagai support yang dinamis. Saat harga kembali retest OCL, area tersebut menjadi titik ideal untuk mencari sell, terutama jika ada konfirmasi dengan SNR atau key level lain.

Example 2

In this example, the OCL acts as a support that later gets broken. When price comes back to retest the OCL, the area becomes an ideal sell zone, especially if it aligns with another level like SNR or a key level.

OC, or Open-Close, is a simple but powerful concept. When we look at a higher-timeframe chart and notice two identical candles in a row — same color, same shape — it's not a coincidence. If we zoom into the lower timeframe, we'll often find that this area is hiding a zone, typically a supply or demand area. For traders who use SMC, this is known as a hidden base — a base that exists inside the lower timeframe.

BUYING

OC, atau Open-Close, adalah konsep yang sederhana tetapi sangat kuat. Ketika kita melihat chart di higher timeframe dan menemukan dua candle yang hampir identik — warna sama, bentuk sama — itu bukan kebetulan. Jika kita memperbesar ke lower timeframe, biasanya akan terlihat bahwa area tersebut menyembunyikan sebuah zona, umumnya zona supply atau demand.

Bagi trader yang menggunakan SMC, area ini sering disebut hidden base — sebuah base yang tersembunyi di dalam struktur lower timeframe.

Why OC Matters

The strength of OC is that it tells us the market is pausing, gathering momentum, and deciding whether to continue or reverse. If we understand this, it's like knowing where orders are being placed. This gives us a major advantage when trading, instead of just staring at the higher timeframe and assuming nothing is happening.

Think of it like this

The higher timeframe is like looking at a building from far away — it looks plain and empty.

But when you walk closer, you begin to see windows, doors, shops, and activity inside.

The OC point is a signal that says:

"This area isn't empty. There's activity hidden inside."

Kenapa OC Penting?

Kekuatan OC adalah kemampuannya memberi tahu kita bahwa market sedang berhenti sejenak, mengumpulkan momentum, dan memutuskan apakah harga akan melanjutkan atau berbalik arah. Jika kita memahami konsep ini, kita seperti mengetahui di mana order sebenarnya ditempatkan.

Ini memberi kita keunggulan besar dibanding hanya melihat higher timeframe dan mengira "tidak ada apa-apa" di sana.

Bayangkan seperti ini:

Higher timeframe ini seperti melihat sebuah gedung dari kejauhan — terlihat kosong dan polos.

Tapi ketika kita mendekat, kita mulai melihat jendela, pintu, toko, dan aktivitas di dalamnya.

Tidak OC adalah sinyal yang berkata:

"Area ini tidak kosong. Ada sesuatu yang tersembunyi di dalamnya."

Chart Explanation

In the examples:

The higher timeframe shows a clean candle formation.

The lower timeframe reveals the real structure: internal ranges, bases, and levels where orders accumulate.

These hidden details explain why price reacts strongly to OC zones.

Penjelasan Chart

Pada contoh di gambar:

Higher timeframe hanya menunjukkan formasi candle yang bersih.

Lower timeframe mengungkap struktur sebenarnya: internal range, base, dan level tempat order terakumulasi.

Detail tersembunyi inilah yang membuat harga sering bereaksi kuat pada zona OC.

Important Note

Don't rely only on the demand zone. On lower timeframes, there are many other valuable elements — Order Blocks (OB), Volume, V-shapes, Accumulation (AI) and more. None of these tools are "right or wrong"; they simply offer different perspectives that support the same market behavior.

Catatan Penting

Jangan hanya fokus pada demand zone. Di lower timeframe, ada banyak elemen lain yang sangat penting, seperti:

Order Block (OB)

Volume

V-shape

Accumulation (AI)

Tidak ada yang "benar" atau "salah"; semuanya hanyalah perspektif berbeda yang menjelaskan perilaku market yang sama.

SELLING

OC atau Open-Close sebenarnya sangat sederhana. Saat kita melihat chart di higher timeframe dan menemukan dua candle identik yang muncul berdampingan, dengan warna dan bentuk yang sama, itu bukan kebetulan. Jika kita zoom ke lower timeframe, biasanya akan terlihat bahwa area tersebut menyimpan zona supply atau demand.

Bagi trader SMC, pola ini sering disebut hidden base — yaitu base yang tersembunyi di struktur timeframe yang lebih kecil.

SELLING

OC, or Open-Close, is actually very simple. When we look at a higher-timeframe chart and notice two identical candles forming side by side — same color, same shape — that's not a coincidence.

If we zoom into the lower timeframe, we'll usually find that this area is hiding a supply or demand zone.

For SMC traders, this is often called a hidden base — a base that exists inside the lower-timeframe structure.

Kekuatan OC

OC memberi kita informasi bahwa market sedang berhenti sejenak, mengumpulkan momentum—entah untuk melanjutkan tren atau melakukan reversal.

Dengan memahami ini, kita seperti mengetahui di mana order besar sedang menunggu, sehingga punya keunggulan saat entry, dibanding hanya melihat higher timeframe dan menganggap area tersebut "kosong".

The Power of OC

OC shows us that the market is pausing, gathering momentum, deciding whether to continue or reverse.

Understanding this is like knowing where hidden orders are sitting. It gives us an advantage when taking trades, instead of looking only at the higher timeframe and assuming nothing is there.

Analogi

Melihat higher timeframe itu seperti melihat gedung dari kejauhan—tampak hanya seperti tembok polos.

Namun ketika kita mendekat, kita melihat jendela, pintu, dan toko.

Begitu juga dengan OC: ia adalah sinyal yang berkata,

"Hei, area ini sebenarnya tidak kosong. Ada sesuatu yang tersembunyi di dalamnya."

A Simple Analogy

Looking at the higher timeframe is like looking at a building from far away — it seems like a plain wall.

But once you get closer, you start to see windows, doors, shops.

That's what the OC point does:

"This spot isn't empty. Something is hiding inside."

Jangan hanya melihat demand zone di higher timeframe saja.

Karena ketika kita turun ke lower timeframe, kita akan menemukan struktur-struktur yang lebih detail, seperti:

Order Block (OB)

V pattern / Volume shift

A structure / Accumulation

Tidak ada yang benar atau salah. Semua itu adalah bentuk informasi tambahan yang membantu kita membaca likuiditas dan perilaku market di dalam zona tersebut.

Don't focus only on the demand zone.

Because when you zoom into the lower timeframe, you'll often find more detailed structures, such as:

Order Block (OB)

V formation / Volume shift

Accumulation (A)

None of these are right or wrong — they are simply different ways the market expresses liquidity and buildup inside the zone.

@abayforex

MSNR TRENDLINES

TRENDLINES — WHAT THEY ARE AND WHY THEY MATTER

The market doesn't move randomly, even if many traders think it does.
Every price movement has a direction, a structure, and a reason behind it.

A trendline is one of the key tools that helps you understand market structure and trade in harmony with the trend, instead of guessing.

Trendlines aren't just visual decorations for your chart — they reveal the true behavior of price.
When you know how to use trendlines correctly, you can instantly recognize whether the market is:

Moving with strength

Losing momentum

Preparing for a possible reversal

Market tidak pernah bergerak secara acak, meskipun banyak trader menganggapnya begitu.
Setiap pergerakan harga selalu memiliki arah, struktur, dan alasan di baliknya.

Trendline adalah salah satu alat utama yang membantu kita melihat struktur market dan trading sesuai dengan tren, bukan sekadar menebak.

Trendline bukan hanya garis yang menghiasi chart terlihat rapi — trendline mencerminkan perilaku harga yang sebenarnya.
Jika digunakan dengan benar, trendline dapat langsung menunjukkan apakah market sedang:

Bergerak dengan kekuatan

Kehilangan momentum

Bersiap melakukan reversal

What Trendlines Help You Do

Trendlines allow you to:

- Identify the direction of price clearly
- Find entry points that align with the current trend
- Spot potential trend reversals earlier

To build a strong trendline, start by observing which price points are consistently respected.
Then connect those points — that is how a valid trendline forms.

If that trendline overlaps with other structures such as:

Liquidity zones

Trendline confluence

Consequent Encroachment (CE)

...the zone becomes even more powerful because multiple confirmations strengthen the setup.

Fungsi Utama Trendline

Trendline membantu kamu untuk:

- Melihat arah harga dengan lebih jelas
- Menentukan entry yang sesuai tren dengan lebih mudah
- Menangkap reversal dari tahap awal

Cara membangun trendline yang kuat sangat sederhana:
Amati titik-titik harga yang sering dihormati oleh market, kemudian hubungkan titik-titik tersebut — itulah trendline yang valid.

Jika trendline tersebut juga beresona dengan struktur lain seperti:

Zona likuiditas

Confluence trendline

Consequent Encroachment (CE)

...maka zona tersebut menjadi jauh lebih kuat, karena ada beberapa konfirmasi yang mendukungnya.

How Do We Know If a Zone Is Truly Strong?

1. Check for liquidity before the zone.

If there is clear liquidity buildup leading into the zone, it often signals that price will react strongly once it reaches that level.

2. Check the trendlines.

A zone supported by multiple intersecting trendlines becomes much stronger, because it aligns structural, directional, and liquidity factors.

When these elements combine, the zone isn't just a random level — it's a high-probability area backed by multiple confirmations.

Bagaimana Mengetahui Apakah Sebuah Zona Benar-Benar Kuat?

1. Periksa likuiditas sebelum zona.

Jika ada akumulasi likuiditas sebelum harga memasuki zona, biasanya menunjukkan bahwa akan ada reaksi harga yang kuat saat zona tersebut disentuh.

2. Periksa trendline.

Sebuah zona yang berpotongan atau mengkonfirmasi zona yang sama, semakin kuat zona tersebut — karena struktur, arah, dan likuiditas saling mendukung.

Jika faktor-faktor ini berkumpul di satu tempat, zona tersebut bukan lagi level biasa, tetapi zona probabilitas tinggi yang didukung oleh banyak konfirmasi.

A Good Trendline Isn't the Perfect One — It's the Respected One

A strong trendline is not the one that looks neat or artistic.

It's the one that price reacts to, because it reflects the intentions of smart money.

Understanding trendlines deeply is like understanding the rhythm of the market.
Instead of relying on guesswork, you begin to read price with your own eyes.

Trendline yang Baik Bukan yang Sempurna, Tapi yang Dihormati Harga

Trendline yang kuat bukanlah garis yang terlihat sempurna, lurus, atau estetik.

Trendline yang kuat adalah garis yang menunjukkan reaksi harga, karena menggambarkan niat dari pelaku pasar besar (smart money).

Jika kamu memahami trendline dengan baik, kamu akan mulai memahami irama pergerakan market.

Dari yang sebelumnya menebak-nebak, kamu akan kembali menjadi seseorang yang bisa membaca market dengan matanya sendiri.

LIVE EXAMPLE —

1

2

3

How Can We Be Sure That a Zone Is Truly Strong?

1. Periksa likuiditas sebelum zona.
Jika ada akumulasi likuiditas sebelum harga memasuki zona, biasanya menunjukkan akan ada pergerakan harga yang kuat saat zona tersebut ditembus.
Likuiditas yang "menumpuk" sering menjadi bahan bakar untuk pergerakan selanjutnya.

2. Periksa trenline.

Trenline yang mendukung zona bisa harga satu arah bukan beberapa.
Semakin banyak trenline yang saling berpotongan atau mengkonfirmasi dalam zona yang sama, semakin kuat zona tersebut — karena harga didorong oleh banyak struktur pasar sekaligus.

3. Check for liquidity before the zone.

If there is liquidity building up before price reaches the zone, it often signals that a strong reaction will occur when the zone is touched.

Liquidity becomes the "fuel" that drives the next movement.

2. Check the trendlines.

A zone may be supported by one or multiple trendlines.

The more trendlines that intersect or align within the same zone, the stronger the zone becomes — because it is reinforced by several market structures at once.

CARA MENGGUNAKAN TRENDLINE DISTANCE

PRINSIP UTAMA

Sendiran (touches) harus memiliki jarak yang seimbang → menghasilkan trendline yang kuat.

Jangan pernah memaksakan garis (biarkan market yang menunjukkan, jangan dipaksa).

Hanya bekerja dengan 4 zona MSBL utama.

Trendline tidak harus selalu fresh.

SYARAT UNTUK MENGAMBIL TRENDLINE

Sendiran harus terjadi di atas atau di bawah SNR.

Jika harga berada di atas SNR → trend kuat (bias bullish).

Jika harga berada di bawah SNR → trend lemah (bias bearish).

Market sering meninggalkan wick/shadow dekat SNR → gunakan itu untuk mengonfirmasi levelnya.

CONDITIONS FOR DRAWING A TRENDLINE

Touches must occur above or below SNR.

If price is above SNR → strong trend (bullish bias).

If price is below SNR → weak trend (bearish bias).

The market often leaves a wick/shadow near SNR → use it to confirm the level.

KEY PRINCIPLES

Touches must be equally spaced → this creates a strong trendline.

Never force a line (let the market show you—don't try to make it fit).

Only works with the 4 main MSBL zones.

Trendlines don't always need to be fresh.

INGKASAN MEDIA

1. Sendiran yang seimbang = trendline yang kuat.

2. SNR + trendline = zona spesial.

3. Harga di atas SNR → fokus cari buy / harga di bawah SNR → fokus cari sell.

4. Jangan memaksakan garis trendline.

EASY SUMMARY

1. Equal touches = strong trendline.

2. SNR + trendline = special zone.

3. Above SNR → look for buys / Below SNR → look for sells.

4. Don't force a trendline.

Trendlines membantu kamu untuk:

Mengidentifikasi apakah harga sedang naik atau turun.

Mencari titik entry yang sejalan dengan trend utama.

Melihat potensi reversal lebih awal — sebelum orang lain memaklumi.

Trendlines help you to:

Identify whether price is moving up or down.

Find entry points that align with the main market trend.

Spot reversals early — before most traders notice them.

MSNR : TRENDLINES

✓ The market never moves randomly — it always has a direction.

And trendlines are one of the most powerful tools to help us clearly identify that direction.

✓ Traders who understand trendlines will

can read the market and know with confidence

"which direction they should be trading in."

✓ Trading isn't about emotion — it's about logic and confidence.

Trendlines help you to:

Identify whether price is moving up or down

Find entry points that align with the main trend

Spot reversal opportunities early — before most traders notice

Trendline Touch Rules

Touches must occur above or below SNR

If price is above SNR — strong trend (bullish bias)

If price is below SNR — weak trend (bearish bias)

The market often leaves ticks near SNR — use this to confirm the level

Quick Summary

1. Equal touches = strong trendline

2. SNR + trendline = special zone

3. Above SNR — look for buys / Below SNR — look for sells

4. Never form a trendline

✓ Market tidak pernah bergerak secara acak — selalu ada arahnya.

Dan trendline adalah salah satu alat paling kuat untuk membantu kita melihat arah tersebut dengan jelas.

✓ Trader yang memahami trendline dengan baik

dapat membaca pergerakan market dan mengetahui dengan yakin "ke arah mana mereka seharusnya melakukan trading."

✓ Trading bukan soal perasaan — tetapi soal logika dan keyakinan.

Trendline membantu kamu untuk:

Mengidentifikasi apakah harga sedang naik atau turun

Menemukan area entry yang sejalan dengan trend utama

Melihat potensi reversal lebih awal — sebelum trader lain menyadarinya

Aturan Sentuhan Trendline

Sentuhan harus terjadi di atas atau di bawah SNR

Jika harga berada di atas SNR — trend akan bias bullish

Jika harga berada di bawah SNR — trend akan bias bearish

Market sering meninggalkan tick/shadow di dekat SNR — gunakan ini sebagai konfirmasi level

Rangkuman Cepat

1. Sentuhan yang seimbang = trendline yang kuat

2. SNR + trendline = zona spesial

3. Harga di atas SNR — fokus buy / Harga di bawah SNR — fokus sell

4. Jangan membentuk trendline

1.

3.

2.

4.

CONTOH CONFLUENCE DIKALAH ARES

BERAKHIR HARGA BERSEKUTAN DAN MENYENTUH DOWNTREND LINE, TERAPAT PADA LEVEL YANG SAMA DENGAN RESISTANCE SEBELUMNYA, LALU MEMBENTUK CANDLE REVERSAL.

→ TITIK INI MENJADI TITIK TIGA FAKTOR BERTEPAT, SEHINGGA PELUANG REVERSAL MENJADI SANGAT TINGGI.

BAHAK TRADER MENGUNAKAN AREA SEPERTI INI SEBAGAI ZONA ENTRY, KARENA ZONA TERSEBUT MEMBERIKAN KONFIRMASI ARAH YANG LEBIH KUAT — BUKAN SEKADAR TERAKAN ACAK.

EXAMPLE OF CONFLUENCE IN ACTION

IMAGINE PRICE MOVES UPWARD AND TAPS A DOWNTREND LINE, RIGHT AT THE SAME LEVEL AS A PREVIOUS RESISTANCE, AND THEN FORMS A REVERSAL CANDLE.

→ THIS POINT REPRESENTS THREE COMBINED FORCES, CREATING A HIGH PROBABILITY OF REVERSAL.

MANY TRADERS USE AREAS LIKE THIS AS THEIR ENTRY ZONES, BECAUSE THESE POINTS CONFIRM DIRECTION WITH MUCH GREATER CONFIDENCE — NOT JUST A RANDOM GUESS.

DIRECTION (MARKET DIRECTION)

APA ITU DIRECTION?

DIRECTION ADALAH FAKTOR YANG MEMBIUT HARGA MAMPU MENYEBIL LEVEL SUPPORT ATAU RESISTANCE.

DIRECTION (MARKET DIRECTION)

WHAT IS DIRECTION?

DIRECTION IS WHAT GIVES PRICE THE ABILITY TO BREAK SUPPORT OR RESISTANCE LEVELS.

CONFLUENCE UNTUK SETUP BUY (TREND REVERSAL)

HARGA SEDANG BERADA DALAM KONDISI DOWNTREND, DAN BILA MENUNGGU KEMUNGKINAN REVERSAL KE ATAS.

BUAT TRENDLINE YANG MENGHUBUNGKAN CLOSE 1 + CLOSE 2.

KETIKA HARGA MELAKUKAN PULLBACK DAN KEMBALI MENYENTUH TRENDLINE TERSEBUT DAN POSISI NYA SEJAJAR DENGAN SUPPORT (SNR) SEBELUMNYA → INILAH TITIK CONFLUENCE KAMU.

DITITIK INI, ADA DUA KONFIRMASI KUAT.

1. STRUKTUR MARKET MENUNJUKKAN POLA REVERSAL DARI SELL KE BUY.

2. HARGA MENYENTUH BEBERAPA FAKTOR SAMA LUGUS: TRENDLINE + LIQUIDITY + AMD + SUPPORT.

TIDAK PERLU MENUNGGU CANDLE KONFIRMASI TAMBAHAN — KARENA RENCANA TRADING KAMU SUDAH MENGARAHKAN ENTRY DI TITIK INI.

CONFLUENCE FOR BUY SETUPS (TREND REVERSAL)

PRICE IS CURRENTLY IN A DOWNTREND, PREPARING FOR A POTENTIAL MOVE TO THE UPSIDE.

DRAW A TRENDLINE CONNECTING CLOSE 1 + CLOSE 2.

WHEN PRICE PULLS BACK AND TOUCHES THAT TRENDLINE — AND ALSO ALIGNS PERFECTLY WITH A PREVIOUS SUPPORT (SNR) LEVEL — THAT BECOMES YOUR CONFLUENCE POINT.

TWO STRONG CONFIRMATIONS APPEAR HERE:

1. MARKET STRUCTURE SHOWS A CLEAR REVERSAL FROM SELL TO BUY.

2. PRICE TAPS MULTIPLE ELEMENTS AT THE SAME TIME: TRENDLINE + LIQUIDITY + AMD + SUPPORT.

NO NEED TO WAIT FOR AN EXTRA CONFIRMATION CANDLE — YOUR PLAN ALREADY TELLS YOU THIS IS THE ENTRY POINT.

CONFLUENCE UNTUK SETUP SELL (TREND REVERSAL)

HARGA SEDANG BERADA DALAM UPTREND DAN BERHAP MEMBUAT REVERSAL KE BAWAH.

TARIK TRENDLINE DARI CLOSE 1 + CLOSE 2.

TUNGGU HINGGA HARGA PULLBACK DAN MENYENTUH TRENDLINE TERSEBUT. PADA SAAT YANG SAMA, HARGA HARUS SEJAJAR DENGAN RESISTANCE (SNR) SEBELUMNYA, DITAMBAH UNDUR AMD + LIQUIDITY.

→ AREA TERSEBUT MENJADI ZONA CONFLUENCE UNTUK SELL.

TEMPATKAN LIMIT ORDER SESUAI RENCANA.

KARENA KETIKA HARGA MENCAKUP ZONA INI, BIASANYA SMART MONEY ATAU INSTITUSI SUDAH MULAI MELAKUKAN POSISI SELL TERBESKUTAN.

KONSEP PENTING

SEBANYAK TITIK CONFLUENCE ADALAH AREA DI MANA KAMU BISA ENTRY DENGAN KEYBERAN TINGGI — KARENA SETIA FAKTOR SEPERTI TREND, TRENDLINE, SNR, DAN PRICE ACTION SEMUANYA SELARAS KE ARAH YANG SAMA.

INILAH MENYEBAB — TETAPI MERENCANAKAN SEBELUM CHART "BEREBKAS".

KAMU TIDAK PERLU MENUNGGU CANDLE KONFIRMASI YANG SEMPURNA, KARENA KETIKA SEMUANYA SUDAH SELARAS, RENCANA TRADING KAMU SUDAH CUPUR UNTUK BERTINDAK.

INI ADALAH TRADING DENGAN "KONFIRMASI MELALUI RENCANA, BUKAN MELALUI EMOSI".

DAN INILAH PERBEDAAN ANTARA:

TRADER YANG MENUNGGU CHART MEMBERI JAWABAN, DAN

TRADER YANG MENGGUBAT RENCANA NYA SEBELUM MARKET MEMBERIKAN SINYAL KE SEMUA ORANG.

CONFLUENCE FOR SELL SETUPS (TREND REVERSAL)

PRICE IS CURRENTLY IN AN UPTREND, PREPARING FOR A REVERSAL TO THE DOWNSIDE.

DRAW A TRENDLINE CONNECTING CLOSE 1 + CLOSE 2.

WAIT FOR PRICE TO PULL BACK AND TOUCH THAT TRENDLINE. AT THE SAME MOMENT, IT SHOULD ALIGN WITH A PREVIOUS RESISTANCE (SNR) LEVEL, PLUS AMD + LIQUIDITY.

→ THIS BECOMES YOUR SELL CONFLUENCE ZONE.

PLACE A SELL LIMIT ORDER ACCORDING TO YOUR PLAN.

BECAUSE WHEN PRICE REACHES THIS AREA, INSTITUTIONAL TRADERS OR SMART MONEY ARE OFTEN ALREADY POSITIONING THEMSELVES TO SELL.

CONCEPT

A CONFLUENCE POINT IS AN AREA WHERE YOU CAN ENTER WITH CONFIDENCE — BECAUSE EVERY ELEMENT (TREND, TRENDLINE, SNR, LIQUIDITY, AND PRICE ACTION) ALIGNS IN THE SAME DIRECTION.

THIS ISN'T GUESSING — IT'S PLANNING AHEAD BEFORE THE CHART SPEAKS.

YOU DON'T NEED A PERFECT CANDLE CONFIRMATION, BECAUSE WHEN EVERYTHING ALIGNS, THE PLAN ITSELF TELLS YOU TO ACT.

THIS IS TRADING BASED ON "CONFIRMATION THROUGH THE PLAN, NOT THROUGH EMOTION".

AND THAT IS THE DIFFERENCE BETWEEN:

A TRADER WHO WAITS FOR THE CHART TO SPEAK, AND

A TRADER WHO LISTENS TO THEIR PLAN BEFORE THE MARKET REACTS.

Market Structure

Structure of the market is determined by the price action.

Structure of the market is determined by the price action.

Structure of the market is determined by the price action.

Structure of the market is determined by the price action.

Structure of the market is determined by the price action.

Structure of the market is determined by the price action.

Structure of the market is determined by the price action.

Structure of the market is determined by the price action.

Structure of the market is determined by the price action.

Structure of the market is determined by the price action.

Structure of the market is determined by the price action.

— The Power of the Point Where Everything Meets —

Saat menggunakan satu trendline saja, sering kali tidak cukup untuk memastikan apakah harga akan memantul atau berbalik arah. Namun, ketika di satu titik yang sama beberapa faktor mendukung arah yang sama, itulah yang disebut **confluence** — titik paling kuat tempat “kekuatan market” berkumpul.

— The Power of the Point Where Everything Meets —

When relying on a single trendline, it's often not enough to confirm whether price will bounce or reverse. But when multiple factors align at the same point and same direction, that creates **confluence** — a powerful zone where multiple market forces come together.

CONFLUENCE (Borealis)

Two or three lines that converge (Borealis) — they strongly confirm a price point where the odds are in your favor.

SMR (Support & Resistance) + Trendline, atau dua SMR yang bertemu di satu titik untuk mendukung sinyal jual (sell) atau beli (buy).

CONFLUENCE

Two or three points of convergence that create a clear price direction. These points could be:

SMR (Support & Resistance) + Trendline, or two SMR levels converging at the same point to give a sell or buy signal.

Key Advantages of Confluence

✓ Akurasi Lebih Tinggi

Bukan hanya satu sinyal, tetapi kombinasi dari beberapa konfirmasi di satu titik.

✓ Mengurangi Sinyal Palsu

Satu sinyal bisa menipu, tetapi beberapa konfirmasi membantu menghindari false breakout atau trap.

✓ Zona Reversal yang Kuat

Terutama ketika harga menyentuh area confluence dan memberikan reaksi kuat, misalnya pada sesi New York ketika volatilitas tinggi.

Example of Confluence in Action

Bayangkan harga naik lalu menyentuh downtrend line, tepat pada level yang sama dengan resistance sebelumnya, kemudian membentuk candle reversal.

— Ada tiga kekuatan yang bertemu.

Trendline + Fibonacci + Resistance

Ini memberikan probabilitas reversal yang sangat tinggi. Banyak trader menggunakan area seperti ini sebagai zona entry karena memberikan keyakinan lebih dibanding sekadar menetak.

Example of Confluence in Action

Imagine price moves upward and taps a downtrend line, right at the same level as a previous resistance, and immediately forms a reversal candle.

— This represents three forces combined.

Trendline + Fibonacci + Resistance

A strong indication of a potential reversal.

Many traders use this type of zone as their entry point because it provides confidence and clarity — not just a random guess.

Key Advantages of Confluence

✓ Higher Accuracy

It's not just one signal — it's a combination of several confirmations at the same point.

✓ Filters Out Fake Signals

A single clue can be misleading, but multiple confirmations help avoid fake breakouts and traps.

✓ Stronger Reversal or Reaction Zones

Especially when price taps into a confluence zone and reacts strongly, often during high-volatility sessions like New York.

What Is Confluence?

“Confluence” berarti menggabungkan beberapa sinyal pada satu titik yang sama.

Secara sederhana, ini adalah area pada chart dimana terdapat beberapa alasan sekaligus mengapa harga kemungkinan besar akan memantul atau berbalik arah, seperti:

Support atau Resistance (SMR)

Trendline

Fibonacci, Supply & Demand, dan faktor teknis lainnya

Ketika 2-3 faktor bertemu pada level yang sama, area tersebut menjadi zona terbaik untuk mencari peluang entry — baik untuk buy maupun sell.

What Is Confluence?

“Confluence” simply means the meeting of several signals at one specific point.

In trading, it refers to an area on the chart where there are multiple reasons for price to bounce or reverse, such as:

Support or Resistance (SMR)

Trendline

Fibonacci, Supply & Demand zones, liquidity points, etc.

When two or three of these factors align at the same level, that area becomes the strongest zone to look for trade entries — both for buy and sell setups.

QML SNR + TL Explanation

This concept combines three powerful confluences:

1. QML (Quasimodo Level)

2. SNR (Support & Resistance)

3. TL (Trendline)

When these three elements align, they create one of the strongest reversal zones in trading.

Earlier explanation (the structure)

QML SNR + TL — Explanation

This setup combines three major confluences:

1. QML (Quasimodo Level)

2. SNR (Support & Resistance)

3. TL (Trendline)

When these three elements line up together, they create a high-probability reversal zone — either for selling or buying.

LEFT SIDE — SELL SETUP (QML + SNR + TL)

1. Structure Shift (QML Formation)

Price makes a sharp move up

Then creates a Lower High pattern disguised inside a Higher High

This internal shift forms the QML zone, where the reversal is likely to occur

2. Price Pullback into SNR + TL

Price retraces into

The SNR zone (previous support turned resistance)

The Trendline (TL) creating confluence

The QML point, marked with red dots

When these three levels meet, the probability of a sell becomes extremely high.

3. Entry Confirmation

A bearish candle forms (shown in the image)

This confirms sellers are active at the QML + TL + SNR area

→ Expected move: Strong drop downward

This is because price reacts to a multi-layer confluence.

LEFT SIDE — SELL SETUP (QML + SNR + TL)

1. Market Structure Creates QML

Price moves upward and then forms a fake Higher High, followed by a strong drop.

This creates the QML level (where the structure shifts from bullish to bearish).

The red dots mark the important reaction points of the QML.

2. Price Retraces into SNR + TL

Price pulls back upward and touches

SNR zone (previous support turned into resistance)

Trendline (TL)

QML reaction level

These three confluences at the same point strengthen the probability of a reversal.

3. Confirmation Candlestick

A bearish candle forms, showing seller control.

→ Expected move: A strong downward drop after all three confluences align.

RIGHT SIDE — BUY SETUP (QML + SNR + TL)

Ini adalah versi kebalikan dari setup sebelah kiri.

1. Structure Break (Bullish QML)

Price moves down strongly

Then forms a Higher Low inside a Lower Low

This creates a bullish QML zone, signaling potential reversal upward

2. Retrace to SNR + TL + QML

Price pulls back and touches:

SNR zone (resistance turned support)

Bullish trendline (TL)

The QML reaction level

The three red dots show that price is reacting repeatedly at the same confluence area — this is a strong sign buyers are waiting there.

3. Entry Confirmation

A bullish candle forms (shown in the image)

This confirms buyers are entering the market.

→ Expected move: Strong continuation upward.

Why This Setup is Extremely Powerful

Because it combines 3 confluences in one spot:

✓ QML — structural reversal

✓ SNR — key level reaction

✓ TL — trend validation

When structure, key level, and trendline all align, the reversal becomes much more reliable.

This is why QML + SNR + TL is often called a high-probability turning point.

RIGHT SIDE — BUY SETUP (QML + SNR + TL)

This is the bullish version of the same concept.

1. Bullish QML Structure Forms

Price drops and forms a false Lower Low

Then it rises, creating a QML level for bullish reversal

2. Price Pullback to QML + SNR + TL

Price retraces to retest

SNR zone (previous resistance turned support)

Bullish trendline (TL)

The QML retest level

The three red dots show price reacting multiple times — a strong sign of buyer interest.

3. Confirmation Candle

A bullish candle forms at the confluence zone.

→ Expected move: Price rallies strongly upward.

QMX

Comprises of QM + Trendline crossing (X)

Penjelasan QMX (QM + Trendline Crossing)

QMX adalah kombinasi dari dua elemen utama:

1. QM (Quasimodo / Change of Character)

2. Trendline Crossing (X) — perpotongan antara trendline dan area QM/SMR

Kombinasi ini menghasilkan sinyal reversal yang sangat kuat, karena ada dua konfirmasi besar yang terjadi bersamaan: perubahan struktur market dan perpotongan trendline pada area penting.

QMX is a combination of two major market elements:

1. QM (Quasimodo / Change of Character)

2. Trendline Crossing (X) — the intersection between the trendline and the QM/SMR area

This combination creates a high-probability reversal signal, because two powerful confirmations appear at the same time: a structural shift and a trendline break/reversal.

(QMX) untuk Selling Setup

Pada sisi lain pasar terjadi perubahan dari pola selling.

1. QM (QM) — Struktur Dasar

Charakter

Market condition: Higher High (HH) — then price reaches a new HH

Struktur candlestick yang menunjukkan perubahan besar

Harga cenderung naik (area 1 - 2 - 3)

Pada titik ini, harga menunjukkan

SMR (SM)

Trendline (TL)

Terdapat perpotongan struktur (X)

— Kombinasi ini menunjukkan area sell yang sangat kuat.

Kemungkinan?

Karena tidak ada sinyal reversal.

1. QM break: struktur awal trendline dan bullish candlestick

2. QM break: struktur awal trendline dan bullish candlestick

3. Trendline crossing yang menunjukkan perubahan arah

Sekali ini harga bergerak turun dengan kuat.

(QMX) untuk Selling Setup

On the left side of the image, you can see several variations of the QMX sell pattern.

1. Basic QMX sell pattern

For character

The market forms a Higher High (HH) — then falls to create a new HH

A bearish candlestick appears, showing two variations

Price pulls back into 1 - 2 - 3 pattern

Approx 2 price touches

QMX (SM)

Trendline (TL)

The crossing area (X)

— This creates a very strong sell zone.

Why is it strong?

Because three confirmations align:

1. QM break: structure shifts from bullish to bearish

2. Candlestick confirming bearish pressure

3. Trendline crossing: indicating the directional change

After this, price usually drops aggressively.

QMX Sell — Variasi Kedua

Variasi lain menunjukkan pola sama tetapi:

Titik resist lebih rendah

Engulf muncul lebih awal

SNR QM berada sedikit miring

Trendline memotong struktur pada tempat yang sama

Tujuan gambar ini:

→ menunjukkan bahwa bentuk QM bisa berbeda, tetapi logikanya tetap sama.

Yang penting adalah perpotongan TL + QM + SNR + engulf.

QMX Sell — Second Variation

The second sell illustration shows a similar concept, but with small differences:

The resist levels are slightly lower

Engulf appears earlier

SNR QM is angled

The trendline still intersects at the same critical zone

The purpose of this example is to show that:

→ QM shapes can vary, but the logic stays the same.

You just need TL + QM + SNR + engulf coming together.

QMX for Buying Setups

On the right side of the image, you see the opposite version — a QMX buy setup.

1. Basic QMX Buy Structure

Key characteristics:

The market forms a Lower Low (LL) → then fails to create a new LL

A bullish Engulfing candle appears, showing buyers entering

Price pulls back to reset the QM area

At the same point, price touches

QMSNR

Trendline resist

The crossing point (X)

→ This becomes a strong buy zone.

Why does it work?

1. Bullish engulf confirms buyers

2. QM break shows a structural shift from bearish → bullish

3. Trendline crossing validates the new direction

This often leads to a strong upswing move.

Important Notes

QMX is a reversal pattern, not a continuation pattern

The shape doesn't need to look perfect → the logic is what matters

The power of QMX comes from 3-4 confluences happening together

The more elements combine, the stronger the setup

The Core Idea of QMX

QMX is a high-probability reversal pattern because it merges:

✓ Structural change (QM)

✓ Engulfing confirmation

✓ Key SNR resist

✓ Trendline crossing (X)

When multiple factors converge at the same point, the reversal becomes extremely reliable.

Ini dari QMX

QMX adalah super-zone reversal karena menggabungkan:

✓ Perubahan struktur (QM)

✓ Engulf konfirmasi kuat

✓ SNR resist

✓ Trendline crossing (X)

Semua elemen ini bertemu pada satu titik, menciptakan zona entry dengan akurasi sangat tinggi.

QMX untuk Buying Setup

Pada sisi kanan gambar terdapat pola QMX untuk buy, keluarkan dari setup sell.

1. Buy QMX — Struktur Dasar

Ciri-cirinya:

Market membentuk Lower Low (LL) → lalu gagal membuat LL baru

Minimal candle bullish Engulf, tanda buyer mulai mengendalikannya

Harga menarik resist ke area QM

Pada area ini terjadi:

SNR QM

Trendline resist

Perpotongan struktural (X)

→ Area tersebut menjadi zona buy dengan probabilitas tinggi

Kenapa?

Karena ada 3 kekuatan:

1. Engulf bullish

2. QM break (struktur berubah bearish → bullish)

3. Trendline crossing sebagai validasi arah baru

Hasilnya → harga biasanya naik, bisa diprediksi move,

Apa yang Perlu Dihindari?

QMX adalah pola reversal, bukan continuation

Tidak harus selalu terlihat “sempurna,” yang penting logikanya

Fokus pada pertemuan 3-4 faktor sekaligus

Semakin banyak faktor bertemu → semakin kuat sinyalnya

HOW TO USE CANDLE EQUILIBRIUM (CE) IN TRADING

@babayforex

HOW TO USE CANDLE EQUILIBRIUM (CE) IN TRADING (EXTENDED EXPLANATION)

WHAT IS CE (CANDLE EQUILIBRIUM)?

CE (CANDLE EQUILIBRIUM) REPRESENTS THE TRUE BALANCE POINT OF A CANDLE — THE EXACT AREA WHERE BUYING AND SELLING PRESSURE ARE EQUALIZED.

THINK OF EACH CANDLE AS A BATTLEFIELD:

THE UPPER WICK SHOWS WHERE BUYERS LOST POWER.

THE LOWER WICK SHOWS WHERE SELLERS LOST POWER.

THE BODY SHOWS WHICH SIDE WAS STRONGER DURING THE CLOSE.

THE CE TELLS US WHERE THE "FAIR VALUE" OF THAT CANDLE TRADY IS.

CE HELPS TRADERS UNDERSTAND WHICH SIDE (BUYERS OR SELLERS) IS CURRENTLY WINNING THE BATTLE.

HOW CE INDICATES MARKET CONTROL

- PRICE ABOVE CE OF A STRONG BULLISH CANDLE → BUYERS ARE STILL DOMINANT.
- PRICE BELOW CE OF A STRONG BULLISH CANDLE → BUYERS ARE LOSING CONTROL; SELLERS GAINING MOMENTUM.
- PRICE RETESTS CE OF A BULLISH CANDLE AND CONTINUES DROPPING → STRONG CONFIRMATION THAT SELLERS REMAIN IN CONTROL.

THIS IS IMPORTANT BECAUSE MARKETS OFTEN RETURN TO CE TO RETEST THE STRENGTH OF THE PREVIOUS IMPULSE MOVE.

WHY CE IS IMPORTANT

MOST TRADERS ONLY ANALYZE:

CANDLE COLOR (BULLISH OR BEARISH)

BREAK OF STRUCTURE

SUPPORT & RESISTANCE

TREND DIRECTION

BUT CE SHOWS SOMETHING DEEPER:

🔑 IT REVEALS THE INTERNAL STRENGTH OF A CANDLE — NOT VISIBLE FROM THE BODY ALONE.

SMART MONEY OFTEN USES CE AS A REFERENCE TO:

CONFIRM REAL VS FAKE BREAKOUTS

DETECT WEAK RETRACEMENTS

IDENTIFY IMBALANCE IN BUYER-SELLER POWER

REFINE ENTRIES WITH HIGH PRECISION

PRICE FREQUENTLY RETURNS TO CE BEFORE THE NEXT MAJOR MOVE BECAUSE THIS AREA ACTS LIKE A MAGNET OF EQUILIBRIUM. THE 45%-50% CE ZONE (MOST RELIABLE CE AREA)

THE CE IS COMMONLY TAKEN FROM 45%-50% OF THE ENTIRE CANDLE RANGE (HIGH TO LOW INCLUDING WICKS)

WHY THIS RANGE?

1. PRICE NATURALLY GRAVITATES TOWARD THE MIDPOINT TO REBALANCE ORDERS.
2. IT FILTERS OUT NOISE FROM VERY LONG WICKS.
3. IT PROVIDES A MORE ACCURATE EQUILIBRIUM THAN THE EXACT 50%.
4. SMART MONEY OFTEN USES THIS ZONE TO CHECK IF PREVIOUS MOMENTUM IS STILL VALID.

HOW PRICE REACTS TO CE

- ✓ IF PRICE KIPS CE AND REJECTS, IT SHOWS MOMENTUM CONTINUATION.
- ✓ IF PRICE BREAKS AND CLOSSES BEYOND CE, IT SIGNALS A POTENTIAL SHIFT IN CONTROL.
- ✓ IF PRICE CONSOLIDATES AROUND CE, IT USUALLY PREPARES FOR A STRONG MOVE.

EXAMPLE OF HOW TRADERS USE CE

A COMMON SMART MONEY ENTRY TECHNIQUE:

1. IDENTIFY A STRONG IMPULSIVE CANDLE.
2. MARK THE CE ZONE (45%-50%).
3. WAIT FOR PRICE TO RETRACE BACK TO CE.
4. LOOK FOR CONFIRMATION (WICK RETENTION, 80% VOLUME, LIQUIDITY SWEET).
5. ENTER IN THE DIRECTION OF THE INITIAL IMPULSE.

THIS GIVES:

TIGHTER STOP LOSS

HIGHER ACCURACY

HIGHER R:R

BETTER UNDERSTANDING OF MARKET STRUCTURE

CARA MENGGUNAKAN CANDLE EQUILIBRIUM (CE) DALAM TRADING (PENJELASAN LENGKAP)

APA ITU CE (CANDLE EQUILIBRIUM)?

CE (CANDLE EQUILIBRIUM) ADALAH TITIK KESEIMBANGAN DARI SEBUAH CANDLE —
YAITU AREA DI MANA TEKANAN BELIKAN TEKANAN JUAL BERADA DALAM KONDISI SEIMBANG.

Bayangkan satu candle sebagai medan pertempuran:

WICK ATAS MEMUNDURKAN AREA DI MANA BUYER KALAH TEKANAN

WICK BAWAH MENUNDUNGAN AREA DI MANA SELLER KEMILAHKAN KONTROL

BODY MEMUNDURKAN ARAH DOMINAN SAAT CANDLE DITUTUP

CE ADALAH AREA "NILAI NOL" DARI CANDLE TERSEBUT.

CE MEMBAJITU TRADER MENAHARIS SAMA. WANGI CENDUNG MEMENANGKAN PERTARUNGAN DI CANDLE ITU — BUYER ATAU
SELLER.

BAGAIMANA CE MEMUNDURKAN SIAPA YANG MENGONTROL MARKET

- HARGA SEDIKA DI ATAS CE DARI CANDLE BULLISH KUAT → BUYER MASIH DOMINAN
- HARGA TURUN DI BAWAH CE DARI CANDLE BULLISH KUAT → BUYER MULAI KEMILAHKAN KONTROL, SELLER MULAI MENGOT.
- HARGA RETEST CE DARI CANDLE BEARISH KUAT LALU TURUN LAGI → DOMINASI SELLER MASIH KUAT.

SECARA SEDERHANA, CE ADALAH TITIK DI MANA MARKET KEMBALI UNTUK MENCUAI KEKUATAN PERGERAKAN SEBELUMNYA.

KENAPA CE PENTING DALAM TRADING

KEBANYAKAN TRADER HANYA FOKUS PADA:

Warna candle (bullish atau bearish)

Break of structure

Support & resistance

Trend

NAMUN CE MEMBERIKAN INFORMASI RANG LEBIH DALAM:

CE MENCUPAI KEKUATAN INTERVAL CANDLE — SESUATU YANG TIDAK TERLIHAT DARI BODY Saja.

SMART MONEY SERING MENGGUNAKAN CE SEBAGAI ACUAN UNTUK

MEMBEDAKAN PERGERAKAN REAL ATAU FAKE

MENJADI KEMBALIAN RETRACEMENT

MELIHAT SETIMBANGAN TEKANAN BUYER-SELLER

MEMINGKATKAN AKURASI ENTRY

HARGA SANGAT SERING KEMBALI KE CE KARENA AREA INI BERFUNGSI SEBAGAI MAGNET KESEIMBANGAN MARKET.
ZONA CE 40%–50% (ZONA CE PALING AKURAT)

CE BIASANYA DIAMBIL DARI 40%–50% DARI RANGE TOTAL CANDLE (HIGH KE LOW TERMAKUK WICK).

KENAPA ZONA INI BERFUNGSI SEBANYAK?

1. HARGA SEDIKA ALAM TERBARUK KEMBALI KE TITIK TENGAH UNTUK MENYEIMBANGKAN ORDER.
2. MENGURANGI NOISE DARI WICK YANG TERLALU PANJANG.
3. LEBIH AKURAT DIBANDING CE YANG 50% TERTAT.
4. SMART MONEY SERING MEMCUNAKAN ZONA INI UNTUK MEMVALIDASI KEKUATAN IMPULS SEBELUMNYA.

REAKSI HARGA TERHADAP CE

- ✓ JIKA HARGA MENYENTUH CE LALU RETEST, ITU TANDA KEKUATAN MELANJUTKAN ARAH.
- ✓ JIKA HARGA BREAK DAN CLOSE MELEWATI CE, KEMUNGKINAN TERJADINYA PERUBAHAN KONTROL.
- ✓ JIKA HARGA BONGKOL DARI SERTA CE, BIASANYA MARKET SEDANG BERSIAP UNTUK PERGERAKAN BESAR.

CONTOH CARA TRADER SMART MONEY MENGGUNAKAN CE

SALAH SATU TEKNIK ENTRY YANG UMUM:

1. CARILAH CANDLE IMPULSIF YANG KUAT.
2. TANGKAP ZONA CE (40%–50%).
3. TUNGGU HARGA RETRACE KEMBALI KE ZONA CE.
4. CARILAH KONFIRMASI (REJECTION WICK, BOS, VOLUME LAJUTAN, ATAU VOLUME).
5. ENTRY MENURUT ARAH IMPULS AWAL.

TEKNIK INI MEMBERIKAN:

STOP LOSS LEBIH KETAT

ENTRY LEBIH PRESISI

AKURASI LEBIH TINGGI

RISK/REWARD LEBIH BESAR

Explanation of the 47%-50% CE Zone (SELL Version)

The chart shows a sell scenario where price retraces upward into the CE Zone (47%-50%) and then reverses strongly in the downside.

1. Identify the Key Candle for the CE Zone (Bearish)

For a sell setup, we look for a strong bullish impulse candle that initiates a major downward move. This candle is typically:

A liquidity sweep candle with a long upper wick

A bearish Order Block (OB)

A strong momentum candle that starts the drop

This candle becomes the reference candle for marking the 47% and 50% levels.

2. Measuring and Marking the 47%-50% CE Zone

In a bearish setup:

Measure from the high to the low of the bullish impulse candle

Mark two key levels:

50% → the true equilibrium of the candle

47% → the lower boundary of the CE zone for a sell setup

The area between 47%-50% becomes the CE Zone, where smart money typically mitigates before continuing downward.

In the chart, the red area labeled "K" represents the mitigation zone (kill zone) for entry.

3. Wait for Price to Retrace Back Into the CE Zone

In a sell scenario:

1. Price drops impulsively

2. Price retraces upward slowly → collecting liquidity, filling imbalance, or mitigating an OB

3. When price taps the 47%-50% CE Zone, this is where high-precision sell entries form

2.

Common reversal signals inside the zone include:

Bearish rejection wick

Bearish pin bar

Bearish engulfing candle

Weak bullish candles followed by a strong bearish shift

4. Sell Entry and Targets

Once price retraces inside the CE Zone:

- ✓ Entry: Sell within the 47%-50% range
- ✓ Stop Loss: Above the CE Zone or above the most recent wick
- ✓ Targets:

The previous low

Liquidity areas below

Imbalance/FVG continuation levels

The chart shows:

1. Price trades the CE Zone (red zone)

2. Strong rejection

3. A clean continuation downward

SELLING

Sell Setup Summary

The 47%-50% CE Zone is the most precise area to enter a sell after a bullish impulse

This zone acts as a premium mitigation area where smart money positions itself before continuing the drop

A clear reaction inside the zone provides a high-probability entry

Gambar tersebut menunjukkan skenario sell ketika harga naik kembali untuk retest zona CE 45%-50%, lalu melakukan reversal sama dengan kali.

1. Identifikasi Candle Penting untuk CE Zone (Bearish)

Untuk skenario sell, kita mencari candle bearish kuat yang memula penurunan besar. Candle ini biasanya:

Memiliki likuiditas di atasnya (long upper wick).

Menjadi candle Order Block bearish.

Memiliki momentum turun yang signifikan.

Candle ini menjadi basis untuk menarik level 45% dan 50%.

2. Mengukur dan Menandai Zona 45%-50%

Untuk kondisi bearish

Ukur dari high ke low candle impuls bearish tersebut.

Tandai dua level utama:

50% — titik keseimbangan candle.

45% — batas bawah zona CE untuk skenario sell.

Area di antara 45%-50% inilah yang menjadi CE Zone untuk suatu money biasanya mitigasi sebelum melanjutkan turunnya.

Pada gambar, area merah "K" adalah titik KLI zone untuk entry.

3. Tunggu Harga Naik untuk Retest CE Zone

Dalam skenario sell:

1. Harga terus impulsif,

2. Harga kemudian naik perlahan—menzari likuiditas, menung imbalance, atau mitigasi OB.

3. Saat harga masuk ke zona 45%-50%, di sinilah peluang entry presisi tinggi muncul.

2.

Biasanya, tanda-tanda reversal muncul di zona tersebut, seperti:

Rejection wick (penolakan kuat dari atas)

Pin bar bearish

Engulfing bearish

Candlestick lemah sebelum breakdown

4. Entry Sell dan Target

Setelah melihat reaksi di CE Zone:

- ✓ Entry SELL di area 45%-50%
- ✓ Stop loss di atas zona CE atau di atas wick terakhir
- ✓ Target minimal:

Low terdekat

Area likuiditas di bawah

Atau ekstensi FVG/imbalance

Gambar menunjukkan bagaimana harga

1. Retest CE Zone lama setelah.

2. Menolak zona tersebut.

3. Melakukan penurunan dengan trend bearish kuat.

SELLING

Ringkasan Versi Sell

CE Zone 45%-50% adalah tempat paling akurat untuk mencari entry sell setelah impuls bearish.

Zona ini adalah area premium mitigasi di mana suatu money mengambil harga terbaik sebelum melanjutkan distribusi.

Reaksi dalam zona adalah kunci konfirmasi entry.

ZONA CE MEWAKILI "KEBUTUHAN PASAR UNTUK MELAKUKAN KONFIRMASI"

SISI YANG MEMENANGKAN CANDLE SEBELUMNYA BIASANYA MELINDUNGI AREA INI SECARA DIAM-DIAM, KARENA DALAM CANDLE IMPULSIF YANG KUAT SERING TERDAPAT PENDING ORDERS YANG TERTINGGAL DI SEKITAR TITIK TENGAH PERGERAKAN.

KETIKA HARGA KEMBALI MELAKUKAN RETEST KE ZONA INI:

JIKA TEKATAN AWAL MASIH KUAT → HARGA BIASANYA AKAN MEMANTUL DARI CE ZONE.

JIKA TEKATAN MULAI MELEMAH ATAU HABIS → HARGA AKAN MENEMBUS CE ZONE DAN BERPINDAH KENDALI KE SISI BERLAWANAN.

INILAH MOMEN KETIKA PASAR BERGANTI TANGAN, BAIK DARI BUYER KE SELLER, MAUPUN SEBALIKNYA.

PRICE PSYCHOLOGY PERSPECTIVE

THE CE ZONE REPRESENTS "THE MARKET'S NEED FOR CONFIRMATION."

THE SIDE THAT CONTROLLED THE PREVIOUS CANDLE USUALLY DEFENDS THIS AREA QUIETLY, BECAUSE STRONG IMPULSIVE CANDLES OFTEN LEAVE PENDING ORDERS AROUND THE MIDPOINT OF THE MOVE.

SO WHEN PRICE RETURNS TO RETEST THIS ZONE:

IF THE ORIGINAL MOMENTUM IS STILL STRONG → PRICE WILL BOUNCE FROM THE CE ZONE.

IF THAT MOMENTUM IS WEAK OR EXHAUSTED → PRICE WILL BREAK THROUGH THE CE ZONE AND SHIFT CONTROL TO THE OPPOSITE SIDE.

THIS IS THE MOMENT WHEN MARKET CONTROL CHANGES HANDS, FROM BUYERS TO SELLERS, OR VICE VERSA.

RINGKASAN

ZONA 45%-50% PADA WICK CANDLE ADALAH "JANTUNG DARI MOMENTUM PASAR"
INI MERUPAKAN AREA YANG SERING DIGUNAKAN HARGA UNTUK MENGOJI KEMBALI KEKUATAN SEBELUMNYA, SEBELUM MEMUTUSKAN APAKAH AKAN MELANUTKAN TREND ATAU MELAKUKAN REVERSAL.

SETELAH MATA ANDA TERBACA MELIHAT ZONA INI, ANDA AKAN LEBIH MUDAH MENGENALI:

CANDLE MANA YANG MENUNJUKAN KEKUATAN SEBENARNYA,

DAN CANDLE MANA YANG HANYA TAKE MOVE YANG DIBUAT UNTUK MEMERBAK TRADER.

YANG PALING PENTING, ZONA INI ADALAH TEMPAT SMART MONEY SECARA DIAM-DIAM MEMBUKA ATAU MENUTUP POSISI BESAR.

ZONA KECIL, INI MUNGKIN TAMPAK SEDERHANA, TETAPI MEMILIKI PENGARUH BESAR TERHADAP ARAH PERGERAKAN PASAR.

SUMMARY

THE 45%-50% WICK ZONE OF A CANDLE IS "THE HEART OF MARKET MOMENTUM."
IT IS THE AREA WHERE PRICE FREQUENTLY RETURNS TO RETEST PREVIOUS STRENGTH BEFORE DECIDING WHETHER TO CONTINUE OR REVERSE.

ONCE YOU TRAIN YOUR EYES TO RECOGNIZE THIS ZONE, YOU WILL INSTANTLY SEE:

WHICH CANDLES DISPLAY REAL MARKET STRENGTH.

AND WHICH ONES ARE SIMPLY FAKE MOVES DESIGNED TO TRAP TRADERS.

MOST IMPORTANTLY, THIS IS THE AREA WHERE SMART MONEY QUIETLY ENTERS OR EXITS POSITIONS.

A SMALL ZONE THAT MAY LOOK INSIGNIFICANT, YET CARRIES TREMENDOUS INFLUENCE OVER THE MARKET'S MOVEMENT.

MEMAHAMI CE ZONE PADA CANDLE BULLISH

SART MEMBAHAS CE (CANDLE EQUILIBRIUM) DARI SEBUAH CANDLE BULLISH, PENGUKURAN DILAKUKAN DARI OPEN + LOW, KARENA SENTANG INI MENUNJUKKAN ASAL TEKATAN BELI— YAITU AREA TEMPAT SMART MONEY MULAI MENAKUMULASI ORDER (ZONA DEMAND SEBENARNYA).

KARENA ITU, KETIKA CE DARI OPEN + LOW SEBUAH CANDLE BULLISH KUAT BERADA TERAT DI DALAM STRUKTUR DEMAND, AREA INI MENJADI ZONA RETEST UTAMA TEMPAT HARGA SERING KEMBALI SEBELUM MELAKUKAKAN KENAIKAN.

UNTUK CANDLE BEARISH, KEBALIKANNYA, PENGUKURAN CE DILAKUKAN DARI OPEN + HIGH UNTUK MEMERUM TEKANAN JUAL.

JIKA CE ZONE INI REDITULAN BERADA DI DALAM AREA SUPPLY, PELUANG TERJADINYA REVERSAL MENINGKAT SECARA SIGNIFIKAN.

CONTOH Skenario: STRUKTUR UPTREND (HIGHER HIGH + HIGHER LOW)

KETIKA MARKET MEMBENTUK HH DAN HL

SEBUAH CANDLE BULLISH KUAT MENEMBUS HIGH SEBELUMNYA.

KITA UKUR CE DARI OPEN + LOW CANDLE TERSEBUT.

HASILNYA MENUNJUKKAN ZONA INTI DARI TEKATAN BELI YANG SESUMCUNGNYA.

JIKA HARGA KEMUDIAN RETRACE DAN KEMBALI MEMCUI CE ZONE INI, LALU MEMBENTUK CANDLE REAKSI ATAU REVERSAL BULLISH, ITU MENANDAKAN BAHWA:

STRUKTUR MARKET MASIH BERTAHAN

BUYER MASIH MEMEGANG RENDAL

TREND KEMUNGKINAN BESAR AKAN BERLANJUT NARI

4

INSIGHT/UMAH

Jika harga retrase berada di atas CE (Open-Low) + tren bullish masih kuat

Jika harga kembali turun ke bawah CE + tren mulai melemah dan bisa berubah menjadi kondisi yang lebih volatil atau bahkan reversal penuh

Key Takeaways

If price stays above the CE (Open-Low) + the bullish trend remains strong

If price breaks below the CE + the trend is weakening and may shift into a deeper correction or even a full reversal

Ketika CE Zone turning trend is menjadi zona demand besar, area tersebut menjadi sangat kuat karena semakin banyak smart money berkumpul pada level harga yang sama. Whenever there is an overlap between CE Zones and major demand zones, the area becomes exceptionally strong because multiple forms of smart money interest converge at the same price level.

TAMBAHAN PENJELASAN (ADDED EXPLANATION)

CE ZONE BUKAN SEMERAT TITIK TENGAH CANDLE. CE ADALAH MEMORI CANDLE, TEMPAT KEMUNGKINAN BESAR INSTITUSI MENEMPAKAN ORDER BESAR MEREKA.

Saat harga kembali ke zona ini, reaksi yang terjadi akan memperhatikan arah.

Smart money masih mempertahankan posisinya (tren berlanjut), atau

Smart money sudah tidak mendukung pergerakan tersebut (tren melemah + potensi reversal).

Inilah alasan mengapa CE Zone menjadi salah satu alat paling kuat untuk membaca:

Kekuatan pasar sebenarnya vs. pergerakan noise sementara.

UNDERSTANDING THE CE ZONE OF A BULLISH CANDLE

WHEN DISCUSSING THE CE (CANDLE EQUILIBRIUM) OF A BULLISH CANDLE, WE MEASURE FROM OPEN + LOW, BECAUSE THIS RANGE REPRESENTS THE ORIGIN OF BUYING PRESSURE — THE AREA WHERE SMART MONEY BEGINS ACCUMULATING ORDERS (THE TRUE DEMAND ZONE).

THEREFORE, WHEN THE CE MEASURED FROM OPEN + LOW OF A STRONG BULLISH CANDLE ALIGNS WITH AN EXISTING DEMAND STRUCTURE, IT BECOMES A KEY RETEST ZONE WHERE PRICE OFTEN RETURNS BEFORE CONTINUING ITS UPWARD MOVE.

FOR A BEARISH CANDLE, THE OPPOSITE APPLIES: WE MEASURE FROM OPEN + HIGH TO FIND THE CE OF SELLING PRESSURE.

IF THIS CE ZONE HAPPENS TO COINCIDE WITH A SUPPLY AREA, THE PROBABILITY OF A REVERSAL BECOMES SIGNIFICANTLY HIGHER.

EXAMPLE SCENARIO: UPTREND STRUCTURE (HH-HL)

WHEN PRICE IS FORMING HIGHER HIGHS AND HIGHER LOWS

A STRONG BULLISH CANDLE BREAKS ABOVE THE PREVIOUS HIGH.

WE MEASURE THE CE FROM OPEN + LOW OF THAT BULLISH CANDLE.

THIS GIVES US THE CORE ZONE OF TRUE BUYING PRESSURE.

IF PRICE LATER RETRACES TO RETEST THIS CE ZONE AND FORMS A BULLISH REACTION OR REVERSAL CANDLE, IT SIGNALS THAT:

MARKET STRUCTURE REMAINS INTACT

BUYERS ARE STILL IN CONTROL.

THE TREND IS LIKELY TO CONTINUE UPWARD

ADDITIONAL INSIGHT (ADDED EXPLANATION)

A CE ZONE IS MORE THAN JUST A MIDPOINT MEASUREMENT — IT IS THE "MEMORY" OF THE CANDLE WHERE INSTITUTIONAL ORDERS WERE LIKELY PLACED. WHEN PRICE RETURNS TO THIS ZONE, THE REACTION REVEALS WHETHER:

SMART MONEY IS DEFENDING ITS PREVIOUS POSITIONS (TREND CONTINUATION), OR

SMART MONEY IS NO LONGER SUPPORTING THE MOVE (TREND WEARNESS + REVERSAL).

THIS MAKES THE CE ZONE ONE OF THE MOST RELIABLE TOOLS FOR READING TRUE MARKET STRENGTH VS. TEMPORARY VOLATILITY.

A LITTLE KNOWLEDGE FROM ME

1. DRAW YOUR ZONE FROM WHERE THE FORCE STARTED — NOT FROM WHERE PRICE SIMPLY TURNED

FOCUS ON THE CANDLE THAT PUSHED AGGRESSIVELY OR CREATED CLEAR IMBALANCE — THAT IS WHERE BIG MONEY ACTUALLY ENTERED.

(ADDED EXPLANATION)

MANY TRADERS MARK ZONES BASED ONLY ON THE MOST RECENT SWING HIGH/LOW, BUT REAL MARKET POWER ALWAYS BEGINS FROM THE IMPULSIVE CANDLE THAT REMOVED LIQUIDITY. THAT CANDLE IS THE TRUE ORIGIN OF INSTITUTIONAL INTENTION.

2. IF THE ZONE IS ABOVE AN EQUAL HIGH OR BELOW AN EQUAL LOW, IT'S EVEN BETTER

THESE AREAS ARE WHERE THE MARKET OFTEN TRIPS STOPS BEFORE REVERSING. WHEN YOU FIND A CE ZONE ALIGNED WITH EQH/EQL, THAT'S A JACKPOT ZONE.

(ADDED EXPLANATION)

THE MARKET INTENTIONALLY SWEEPS EQH/EQL TO COLLECT RETAIL STOPS. ONCE LIQUIDITY IS TAKEN, PRICE USUALLY MOVES IN THE REAL DIRECTION. A CE ZONE SITTING RIGHT ON TOP OF THESE LEVELS ALMOST ALWAYS PRODUCES A STRONG REACTION.

3. USE HIGHER-TIMEFRAME ZONES AS YOUR MAIN GUIDE

THE HIGHER THE TIMEFRAME, THE MORE MEANINGFUL THE FORCE BEHIND IT. ZONES FROM H4 OR D1 SHOW WHERE INSTITUTIONS ONCE ENTERED WITH HUNDREDS OF LOTS — NOT JUST SMALL NOISE LIKE IN LOW TIMEFRAMES.

RETAIL TRADERS OFTEN FOCUS ONLY ON M5 OR M15, WHEN THE TRUE DIRECTION IS CONTROLLED BY THE HIGHER TIMEFRAME.

(ADDED EXPLANATION)

WHEN YOUR ZONE ALIGNS WITH THE HIGHER TIMEFRAME STRUCTURE, ITS VALIDITY INCREASES DRAMATICALLY AND THE CHANCE OF FALSE SIGNALS DROPS SHARPLY.

MY APPROACH:

1. I DON'T GUESS — I KNOW THE ZONE HAS A REAL REASON.

THIS IS WHERE BIG MONEY ACTED. WHEN PRICE RETURNS TO THIS ZONE, THE PROBABILITY OF A BOUNCE IS EXTREMELY HIGH.

2. I ENTER BECAUSE I UNDERSTAND THE LEVEL — NOT BECAUSE THE CANDLE LOOKS GOOD.

MOST PEOPLE WAIT FOR AN ENGULFING OR PIN BAR BEFORE ENTERING. BUT IF YOU TRULY UNDERSTAND WHY THIS LEVEL CARRIES FORCE, THE MARKET DOESN'T NEED TO "TELL YOU TWICE."

(ADDED EXPLANATION)

A CLEAN CANDLE PATTERN IS OPTIONAL. UNDERSTANDING THE LOGIC BEHIND THE ZONE IS ESSENTIAL.

3. CONFIDENCE COMES FROM ANALYZING THE BIG PICTURE FIRST.

AT THE VERY LEAST, CHECK THE H4 OR D1 TREND TO KNOW WHERE THE MAIN FORCE IS FLOWING. IF YOUR ZONE ALIGNS WITH THE BIG TREND → PLACE THE ORDER CONFIDENTLY.

(ADDED EXPLANATION)

THE HIGHER-TIMEFRAME TREND REPRESENTS THE DIRECTION OF REAL MONEY. AS LONG AS YOU TRADE IN THAT DIRECTION, YOUR PROBABILITY INCREASES — EVEN IF THE CANDLE SETUP ISN'T PERFECT.

ONE THING YOU MUST UNDERSTAND

A GOOD SNR IS NOT ACCURATE BECAUSE OF A REVERSAL CANDLE, BUT BECAUSE YOU MARKED THE CORRECT ORIGIN OF INSTITUTIONAL DECISION-MAKING — THE LEVEL WHERE BIG MONEY PUSHED THE MARKET STRONGLY OR SHIFTED THE TREND.

IF YOU KNOW THAT YOUR LEVEL MARKS A TRUE INSTITUTIONAL ZONE, YOU DON'T NEED TO WAIT FOR EXTRA CANDLESTICK CONFIRMATION.

(ADDED EXPLANATION)

CANDLESTICK PATTERNS ARE ONLY THE RESULT. STRUCTURE + LIQUIDITY + INSTITUTIONAL ZONES ARE THE CAUSE. FOCUS ON THE CAUSE, NOT ON THE DECORATIVE CANDLE SHAPES.

SEKEDIT PENGETAHUAN DARI SAYA:

1. TARIK ZONA DARI TEMPAT KERUATAN DIMULAI BUKAN DARI TEMPAT HARGA BERBALIK.

PERHATIKAN CANDLE YANG MENDORONG HARGA DENGAN KUAT ATAU YANG MEMBENTUK IMBALANCE — KARENA DI SANJALAH BIG MONEY BERAKSI BENAR-BENAR MASUK.

(TAMBAHAN PENJELASAN)

BANYAK TRADER SALAH MENGAMBAR ZONA KARENA HANYA MELIHAT SWING HIGH / SWING LOW TERSEKUT. PADAHAL, KERUATAN PASAR SELALU DIMULAI DARI CANDLE IMPULSIF YANG MEMENDORONG (KUATITAS). DI TITIK ITULAH INSTITUSI MENRACCALKAN JETAK PALING TELAS.

2. JIKA ZONA BERADA DI ATAS EQUAL HIGH / ATAU DI BAWAH EQUAL LOW, ITU LEBIH KUAT LAGI.

AREA SEPERTI INI BIASANYA MENJADI LOKASI MARKET MELAKUKAN STOP-HUNT SEBELUM BERBALIK. JIKA KAMU MELIHAT ZONA SEPERTI INI, ITU ADALAH ZONA JACKPOT.

(TAMBAHAN PENJELASAN)

MARKET SERING SENGAT MENEMBUS EQUAL HIGH/EQUAL LOW UNTUK MENCABUL LIKUIDITAS RETAIL. SETELAH STOP TRADER TERJAHU, BARULAH MARKET BERGERAK KE ARAH SEBENARNYA. ZONA CEYANG BERTEPATAN DENGAN EQL/EQH HAMPIR SELALU MENHASILKAN REAKSI BESAR.

3. GUNAKAN ZONA DARI HIGH TIMEFRAME SEBAGAI PANDUAN UTAMA.

SEMAKIN BESAR TIMEFRAMENYA, SEMAKIN BESAR KERUATAN YANG TERSEKUT.

ZONA DARI H4 ATAU D1 MENUNJUKAN AREA TEMPAT BIG MONEY MASUK DENGAN BATASAN LOT — BUKAN NOISE KECIL SEPERTI DI TIMEFRAME BENDAH.

RETAIL TRADER SERING TERJEBAK HANYA MELIHAT M5 ATAU M15. PADAHAL ARAH DAN KUAT MARKET DITENTUKAN TIMEFRAME BESAR.

(TAMBAHAN PENJELASAN)

JIKA ZONA YANG KAMU AMBIL SELARAS DENGAN STRUKTUR TIMEFRAME BESAR, VALIDITASNYA MENINGKAT BERSAMA LIPAT DAN FALSE SIGNAL BERTURUN DRASTIS.

HAL PENTING YANG HARUS KAMU PAHAMI

SNR YANG BACUS BUKAN AKURAT KARENA BENTUK CANDLE REVERSAL-NYA. MELAKUKAN KARENA KAMU MENANDAI LEVEL YANG BENAR — LEVEL TEMPAT BIG MONEY MENGAMBIL KEPUTUSAN PENTING: MENDORONG HARGA DENGAN KUAT ATAU MEMBALIKKAN TREND.

JIKA KAMU TAHU BAHWA ITU ADALAH TITIK KEPUTUSAN INSTITUSI, KAMU BISA ENTRY TANPA HARUS MENUNGGU KONFIRMASI TAMBAHAN DARI CANDLESTICK.

(TAMBAHAN PENJELASAN)

KONFIRMASI BUKAN BERARTI MENUNGGU PATTERN CANTIK.

KONFIRMASI SEJATI ADALAH PEMAHAMAN STRUKTUR DAN ALASAN MENGAPA LEVEL ITU KUAT.

PENDAKATAN SAYA:

1. SAYA TIDAK MEMBAK — SAYA TAHU ALASAN ZONA ITU ADA.

KARENA ZONA TERSEBUT ADALAH TEMPAT BIG MONEY PERNAH MEMBUAT PERGERAKAN NYATA. SAAT HARGA KEMBALI KE ZONA ITU, PELUANG TERADINYA PANTULAN SANGAT TINGGI.

2. SAYA ENTRY KARENA SAYA PAHAMI STRUKTURNYA, BUKAN KARENA CANDLENYA TERLIHAT BACUS.

BANYAK TRADER MENUNGGU GULPUNG ATAU PIN BAR, TAPI JIKA KAMU PAHAMI KEMANA LEVEL INI BERAKSI, KAMU TIDAK PERLU MENUNGGU MARKET MEMBERI SINYAL REDUM.

(TAMBAHAN PENJELASAN)

CANDLESTICK HANYALAH HASIL AKHIR.

STRUKTUR + LIKUIDITAS = ZONA. INSTITUSI ADALAH PENYEBAB AWALNYA. FORMULAH PADA PENYEBAB, BUKAN BENTUK CANDLE.

3. RASA PERCAKAI DIBERATKAN DARI ANALISIS BIG PICTURE TERLEBIH DAHULU.

SELALU CERMAT BIKAL H4 ATAU D1 UNTUK MELIHAT ARAH KERUATAN UTAMA.

JIKA ZONA YANG KAMU AMBIL SEJALAN DENGAN BIG TREND, LANGSUNG ENTRY — ITU KEPUTUSAN YANG SOLID.

(TAMBAHAN PENJELASAN)

TREND BESAR MENENTUKAN ARAH ARUS UANG.

SELAMA KAMU MENICRUTI ARUS TERSEBUT, ENTRY KAMU MEMILIKI PROBABILITAS YANG TAJAH LEBIH TINGGI MESKIPUN CANDLENYA TIDAK TERLIHAT SEMPURNA.

WHAT IS SMT IN TRADING

@aboyforex

APA ITU SMT? BAGAIMANA CARA MENGGUNAKANNYA?

WHAT IS SMT? HOW DO YOU USE IT?

"LIHATLAH DUA CHART... DAN PAHAMI SIFAT PERGERAKAN MARKET LEBIH DALAM DIBANDING MEREKA YANG HANYA FOKUS PADA SATU CHART SAJA."

APA ITU SMT DIVERGENCE? (TANPA RUMUS YANG RUMIT)

SMT ADALAH SINGKATAN DARI SMART MONEY TECHNIQUE.
DIVERGENCE BERARTI PERBEDAAN PERGERAKAN.

SECARA SEDERHANA, SMT DIVERGENCE ADALAH TEKNIK UNTUK MELIHAT KAPAN DUA ASET YANG BIASANYA BERGERAK SAMA... MULAI BERGERAK BERBEDA.

"LOOK AT TWO CHARTS... AND YOU WILL UNDERSTAND THE TRUE NATURE OF THE MARKET BETTER THAN THOSE WHO ONLY LOOK AT ONE"

WHAT IS SMT DIVERGENCE? (NO FORMULAS NEEDED)

SMT STANDS FOR SMART MONEY TECHNIQUE.
DIVERGENCE SIMPLY MEANS A DIFFERENCE IN MOVEMENT.

IN SIMPLE TERMS, SMT DIVERGENCE IS USED TO SPOT WHEN TWO ASSETS THAT NORMALLY MOVE TOGETHER... START MOVING DIFFERENTLY.

CONTOH:

GOLD (XAUUSD) DAN SILVER (XAGUSD)

BIASANYA BERGERAK DENGAN ARAH YANG SAMA, KARENA KEDUANYA ADALAH LOGAM MULIA.

NAWUN IKA SUATI HARI:

GOLD TURUN TAJAH TAPI SILVER TIDAK, ATAU

GOLD MEMBUAT LOWER LOW TAPI SILVER TIDAK MENGIKUTI,

MAKA ITU ADALAH TANDA BAHWA ADA SESUATU YANG TIDAK BIASA SEDANG TERJADI DI MARKET.

PERILAKU YANG TIDAK SELARAS INI ADALAH JEJAK SMART MONEY.

YANG MENUNJUKKAN BAHWA KEKUATAN PASAR SEBENARNYA TIDAK BERADA PADA TEMPAT YANG DILIHAT KEBANYAKAN TRADER.

EXAMPLE:

GOLD (XAUUSD) AND SILVER (XAGUSD)

NORMALLY MOVE IN THE SAME DIRECTION BECAUSE THEY ARE BOTH PRECIOUS METALS.

BUT IF ONE DAY:

GOLD DROPS SHARPLY BUT SILVER DOES NOT, OR

GOLD MAKES A NEW LOWER LOW BUT SILVER FAILS TO FOLLOW,

THEN SOMETHING UNUSUAL IS HAPPENING IN THE MARKET.

THIS UNUSUAL BEHAVIOUR IS THE FOOTPRINT OF SMART MONEY.

SHOWING YOU THAT THE REAL MARKET STRENGTH MAY NOT BE WHERE MOST TRADERS THINK IT IS.

MENGAPA SMT PENTING?

KARENA KETIKA SMART MONEY INGIN MENGAKUMULASI ATAU MENDISTRIBUSI,
MEREKA TIDAK MELAKUKANNYA PADA SELURUH MARKET SECARA BERSAMAAN.

BIASANYA:

SATU ASET AKAN "DIPANCING" UNTUK MEMICU STOP LOSS TRADER RETAIL,

SEMENTARA ASET LAINNYA TIDAK TERPENGARUH DAN TETAP STABIL.

DAN BIASANYA ASET YANG TIDAK TERJEBAK MANIPULASI ITULAH YANG MENUNJUKKAN ARAH MARKET YANG SEBENARNYA.

ITULEH SEBABNYA KITA MENGGUNAKAN SMT DIVERGENCE:

UNTUK MEMBACA PERILAKU TERSEMBunyi INI DAN MELIHAT APA YANG SEBENARNYA DILAKUKAN SMART MONEY DI BALIK LAYAR.

WHY IS SMT IMPORTANT?

BECAUSE WHEN SMART MONEY WANTS TO ACCUMULATE OR DISTRIBUTE,
THEY DON'T DO IT ACROSS THE ENTIRE MARKET AT THE SAME TIME.

TYPICALLY:

ONE ASSET IS MANIPULATED TO TRIGGER STOP LOSSES,

WHILE THE OTHER ASSET DOES NOT REACT THE SAME WAY.

AND THE ASSET THAT DOESN'T FALL FOR THE MANIPULATION USUALLY REVEALS THE TRUE MARKET DIRECTION.

THAT'S WHY WE USE SMT DIVERGENCE —

TO DETECT THESE HIDDEN BEHAVIOURS AND UNDERSTAND WHAT SMART MONEY IS REALLY DOING BEHIND THE SCENES.

SMT Divergence — Simplified Explanation

1. WHAT IS SMT DIVERGENCE?

SMT (SMART MONEY TECHNIQUE) DIVERGENCE HAPPENS WHEN TWO HIGHLY CORRELATED PAIRS SUDDENLY MOVE DIFFERENTLY. THIS DIFFERENCE REVEALS WHICH PAIR IS MAKING A FAKE MOVE, AND WHICH ONE SHOWS THE TRUE MARKET DIRECTION.

👉 THE PAIR THAT DOES NOT MAKE THE EXTREME MOVE IS USUALLY THE CORRECT ONE TO FOLLOW.

2. COMMON SMT SCENARIOS

➤ SCENARIO 1 — XAU DROPS, BUT XAG DOESN'T

GOLD FALLS, BUT SILVER STAYS STABLE.

THIS MEANS GOLD'S DROP IS LIKELY A FAKE MOVE.

EXPECT PRICE TO REVERSE UPWARD + FOLLOW SILVER.

➤ SCENARIO 2 — XAG DROPS, BUT XAU DOESN'T

SILVER DROPS SHARPLY, BUT GOLD REMAINS STABLE.

SILVER'S DROP IS THE FAKE SIDE.

EXPECT PRICE TO REVERSE UPWARD + FOLLOW GOLD.

➤ SCENARIO 3 — XAU RALLIES, BUT XAG DOESN'T

GOLD PUSHES UP STRONGLY, BUT SILVER DOESN'T FOLLOW.

GOLD'S RALLY IS LIKELY FAKE.

EXPECT PRICE TO REVERSE DOWNWARD + FOLLOW SILVER.

➤ SCENARIO 4 — XAG RALLIES, BUT XAU DOESN'T

SILVER RALLIES, BUT GOLD STAYS FLAT.

SILVER IS TAKING THE MOVE.

EXPECT PRICE TO REVERSE DOWNWARD + FOLLOW GOLD.

👉 ALWAYS FOLLOW THE PAIR THAT MOVES NORMALLY — THAT'S WHERE TRUE STRENGTH IS.

3. WHY SMT DIVERGENCE HAPPENS

SMART MONEY DOESN'T ALWAYS PUSH BOTH CORRELATED MARKETS AT THE SAME TIME. THEY MAY:

CREATE A FAKE BREAKOUT ON ONE PAIR

TRAP RETAIL TRADERS

WHILE THE OTHER PAIR SHOWS THE REAL DIRECTION

SO THE PAIR THAT DOESN'T FALL FOR THE FAKE MANIPULATION IS THE ONE YOU TRUST.

4. BEST PAIRS TO USE FOR SMT

APART FROM GOLD-SILVER, SMT WORKS WELL ON PAIRS WITH NATURALLY STRONG CORRELATION.

EURUSD ⇄ GBPUSD

USDCAJ ⇄ USDCNH

AUDUSD ⇄ NZDUSD

⚠️ IF THE TWO PAIRS DO NOT NORMALLY MOVE TOGETHER, SMT WON'T BE EFFECTIVE.

5. HOW TO USE SMT TO IMPROVE YOUR ENTRIES

1. IDENTIFY THE FAKE SIDE.

EXAMPLE: XAU BREAKS THE LOW AGGRESSIVELY, BUT XAG DOES NOT.

2. WAIT FOR THE FAKE PAIR TO RETURN BACK INTO THE RANGE.

DON'T ENTER IMMEDIATELY.

3. ENTER IN THE REAL DIRECTION.

IF XAU TAKES BELOW A LOW → ENTER BUY ONCE PRICE RECLAIMS THE LEVEL.

4. PLACE STOP LOSS BELOW THE FAKE-OUT LEVEL.

THIS PROTECTS YOU FROM DEEPER LIQUIDITY GRABS.

👉 SMT IS NOT A "BUY/SELL SIGNAL." IT'S A FILTER THAT HELPS YOU AVOID TRAPS.

Q1

Q2

6. KEY TAKEAWAYS

THE SIDE THAT GETS FORCED OUT IS THE WRONG SIDE.

THE PAIR THAT REMAINS STABLE SHOWS WHERE REAL MONEY IS POSITIONED.

ONCE YOU MASTER SMT, YOU'LL RECOGNIZE WHEN THE CHART IS:

- ✓ "ACTING" TO TRAP TRADERS
- ✓ OR "REVEALING" ITS TRUE DIRECTION

Penjelasan SMT Divergence (Simplified & Mudah Dipahami)

1. APA ITU SMT DIVERGENCE?

SMT (SMART MONEY TECHNIQUE) DIVERGENCE ADALAH KONDISI KETIKA DUA PAIR YANG BIASANYA BERGERAK BERSAMA TIBA-TIBA MEMUNJUKKAN PERGERAKAN YANG BERBEDA. PERBEDAAN INI MEMBIDAI POTANSIAL BAHWA SALAH SATU PAIR SEDANG MELAKUKAN TAKE MOVE, SEDANGKAN PAIR YANG LAIN MENUNJUKKAN ABRAH PASAR YANG SEBENARNYA.

INTINYA, LINTAS PAIR MANA YANG "TIDAK IKUT" MELAKUKAN GERAKAN EKSTREM — ITU BIASANYA ARAH ASLI PASAR.

2. CONTOH SITUASI SMT

➤ KASUS 1 — XAU TURUN, XAG TIDAK TURUN

GOLD (XAU) MUNDUR, TAPI SILVER (XAG) TIDAK IKUT MUNDUR

ARTINYA PERUNDUNGAN XAU ADALAH FAKE, DAN BERSIKUT DENGAN BESAR HARGA AKAN BIASA NAIK.

MAKA, INTU XAG — EXPECT REVERSAL NAIK.

➤ KASUS 2 — XAG TURUN, XAU TIDAK TURUN

SILVER TURUN TAWAN, GOLD TETAP STABIL

MAKA PENURUNAN SILVER ADALAH FAKE — HARGA KEMUNGKINAN AKAN NAIK.

➤ KASUS 3 — XAU NAIK, XAG TIDAK IKUT

GOLD RALY KUAT, TETAPI SILVER DIAM SAMA

RALY GOLD KEMUNGKINAN FAKE — HARGA BISA TURUN.

➤ KASUS 4 — XAG NAIK, XAU TIDAK IKUT

SILVER NAIK, GOLD TIDAK IKUT

KEMUKUN SILVER ADALAH FAKE — HARGA BISA TURUN.

SELALU IKUTI PAIR YANG TIDAK MELAKUKAN GERAKAN EKSTREM, ITU ADALAH SISI YANG BENAR.

3. KEMAPA BISA TERJADI SMT?

KARINA SMART MONEY (INSTITUSI) TIDAK SELALU MENDORONG KEDUA PAIR KE ARAH BERBAMBAH. MERKA SERING "MISMANAGING" TRADER DENGAN:

MEMBUKUKAN SALAH SATU PAIR TERLALU TINGGI

ATAU MENUNTUNANNYA TERLALU DALAM

...SEMENTARA PAIR SATUNYA TETAP BERGERAK NORMAL.

PAIR YANG BERGERAK NORMAL, ITULAH YANG MENUNJUKKAN ARAH YANG SEBENARNYA.

4. PAIR YANG COCOK UNTUK ANALISIS SMT

SELAIN GOLD—SILVER, ADA PAIR LAIN YANG MEMILIKI KORELASI BAK.

EURUSD ⇄ CHFUSD

USDCAD ⇄ USDCHF

AUDUSD ⇄ NZDUSD

HINDARI SMT JIKA DUA PAIR TIDAK BERGERAK BERSAMA DALAM KONDISI NORMAL, KARINA HARGA NYA AKAN MENYISIRKAN.

5. CARA MENDOKUMEN SMT UNTUK ENTRY

1. IDENTIFIKASI SAHA YANG MELAKUKAN FAKE MOVE

CONTOH: GOLD BREAK LOW TERLALU DALAM, SILVER TIDAK IKUT BREAK.

2. TUNGGU HARGA KEMBALI MASUK KE RANGE

JANGAN LANGSUNG ENTRY SAAT FAKE TERJADI.

3. ENTRY KE ARAH YANG BENAR

JIKA GOLD FAKE BREAK BAWAH — ENTRY BUY SETELAH HARGA KEMBALI NAIK KE ATAS LOW.

4. STOP LOSS AMAN

LETAKKAN STOP LOSS DI BAWAH LEVEL TAKE-OUT.

SMT = ALAT UNTUK HINDARI TEBALAN PASAR, BUKAN SINYAL BUY/SELL LANGSUNG.

6. INTI PEMAHAMAN SMT

PASAR YANG FAKE = SISI YANG GALAH / TERDEBAK.

PASAR YANG STABIL DAN TIDAK IKUT FAKE = ARAH SEBENARNYA.

JIKA KAMU BELAKAR MEMBUKA SMT DENGAN BENAR, KAMU AKAN TAWAR KAPAN CHART.

✓ "REACTIVE" UNTUK MENYERAP TRADER

✓ ATAU "TUTUP" MENUNJUKKAN ARAH PASAR

03

03

SMT Divergence Simplified

Scenarios & Which Direction to Follow

Gold (XAU) drops but Silver (XAG) doesn't → Follow XAG / expect price to reverse upward → Price likely to move up

Silver (XAG) drops but Gold (XAU) doesn't → Follow XAU / expect price to reverse upward → Price likely to move up

Gold (XAU) rallies but Silver (XAG) doesn't → Follow XAG / expect price to reverse downward → Price likely to move down

Silver (XAG) rallies but Gold (XAU) doesn't → Follow XAU / expect price to reverse downward → Price likely to move down

☞ The market that doesn't fake the move is the one showing true strength.

Common Pairs for SMT Analysis

Selain Gold-Silver, banyak pasangan lain yang bagus digunakan dengan prinsip yang sama:

EURUSD ⇌ GBPUSD (European pairs)

USDCAD ⇌ USDCHF (North American pairs)

AUDUSD ⇌ NZDUSD (Oceania pairs)

⚠ Pastikan kedua pair biasanya bergerak mirip di kondisi normal.
Jika korelasinya tidak stabil, analisis SMT kurang efektif.

Advanced Tip: Using SMT to Improve Your Entries

Gunakan SMT sebagai filter untuk menghindari fake moves sebelum entry.

Kombinasikan SMT dengan FVG, liquidity zones, atau order block untuk konfirmasi lebih kuat.

Biasanya saya menunggu sisi yang "fake" kembali masuk range, lalu entry ke arah yang benar.

Contoh:

Gold (XAUUSD) membuat fake-break di bawah low, tetapi Silver (XAGUSD) tidak mengikuti.

Saat Gold kembali naik ke atas low tersebut → ini sinyal buy.

Stop loss bisa ditempatkan di bawah low yang menjadi fake-out.

My View on SMT

SMT bukan alat untuk "memberi sinyal trading",
tapi mengajarkan kita mengenali momen ketika trader lain tertipu.

Sisi yang "terjebak" adalah sisi yang salah.

Sementara sisi yang tetap stabil adalah tempat uang besar sebenarnya bergerak.

Jika kamu memahami SMT dengan benar,

kamu bisa tahu kapan chart sedang "menipu" dan kapan ia menunjukkan kondisi pasar yang sebenarnya.

How Do You Know When the SMT You See Is Truly "Confirmed"?

This is the key point, because many SMT setups may look correct but are actually not confirmed yet. To validate an SMT signal, we must look for confirmation elements, also known as SMT Confirmation.

1. Clear Market Structure

SMT is only meaningful when it appears near the end of a trend. If it forms in the middle of a trend, it may simply be noise.

Market structure helps reveal the intention of smart money.

For example, if SMT occurs after a strong bullish trend — Gold makes a fake push higher while Silver does not — this becomes a strong reversal indication.

2. Liquidity Grab (Stop-Hunt Move)

A valid SMT setup must involve a liquidity sweep.

Without stop-loss grabbing, there's no evidence that smart money participated in the move.

Example:

XAU breaks below its previous low → sweeping liquidity.

XAG does not break the low → meaning Gold created a fake drop.

This suggests real buying pressure is on Silver.

3. Reaction or BOS (Break of Structure)

Once divergence appears, the side that did not make the fake move must show a clear reaction.

A reaction may appear as:

A strong momentum candle

A Break of Structure (BOS)

A clean displacement in price

No reaction = SMT not confirmed

Clear reaction = SMT confirmation begins

4. Wait for the Fake Side to Return Into the Range

Do not enter an SMT trade immediately after spotting divergence.

Wait until the fake side — for example, XAU breaking below the low — moves back inside the previous price range.

This shows that smart money is shifting back toward the real direction.

Example:

XAU breaks below the low, but XAG doesn't.

When XAU moves back above the broken low → this is the entry signal (Buy).

Stop loss: below the fake-out low.

Take profit: target the upper liquidity area.

Bagaimana Cara Mengetahui SMT yang Muncul Sudah "Terkonfirmasi"?

Ini poin paling penting, karena banyak pola SMT yang terlihat benar tetapi belum benar-benar valid. Untuk memastikan SMT itu sah, kita perlu melihat unsur-unsur konfirmasi, atau disebut SMT Confirmation.

1. Struktur Market yang Jelas

SMT hanya kuat jika muncul di akhir suatu tren. Jika muncul di tengah tren, itu biasanya hanya noise.

Struktur market membantu mengungkap niat smart money.

Contoh: setelah tren naik panjang, Gold membuat fake push ke atas sementara Silver tidak ikut → itu sinyal reversal yang kuat.

2. Liquidity Grab (Gerakan Stop-Hunt)

SMT yang valid harus diawali pengambilan likuiditas. Tanpa sweep stop-loss, tidak ada bukti bahwa smart money terlibat.

Contoh:

XAU menembus low sebelumnya → menyapu buy stops.

XAG tidak menembus low → artinya penurunan Gold adalah fake move. Ini menunjukkan tekanan beli sebenarnya ada di Silver.

3. Adanya Reaksi atau Break of Structure (BOS)

Setelah SMT divergence muncul, sisi yang tidak melakukan fake move harus menunjukkan reaksi.

Reaksi bisa berupa:

Candle kuat ke arah berlawanan

Break of Structure (BOS)

Displacement yang jelas

Tidak ada reaksi = SMT belum valid

Ada reaksi kuat = SMT mulai terkonfirmasi

4. Tunggu Sisi yang Fake Kembali ke Dalam Range

Jangan langsung entry setelah melihat divergence.

Tunggu sisi yang melakukan fake-out (misalnya XAU yang break low) kembali masuk ke range harga sebelumnya.

Momen ini menandakan smart money mulai kembali pada arah yang sebenarnya.

Contoh:

XAU break low, tapi XAG tidak.

Saat XAU kembali naik di atas low yang ditembus → itu sinyal buy.

Stop loss: di bawah fake-out low.

Take profit: area likuiditas di atas.

(QT) QUARTERLY THEORY

QUARTERLY THEORY (EASY EXPLANATION)

MAIN CONCEPT

EVERY FINANCIAL MARKET — WHETHER FOREX, GOLD, OR CRYPTO — MOVES IN REPETITIVE CYCLES.

WITHIN A SINGLE DAY, OR EVEN WITHIN A SHORT WINDOW (SUCH AS 90 MINUTES), PRICE USUALLY GOES THROUGH 4 MAIN PHASES:

Q1 — ACCUMULATION (COLLECTING / BUILDING POSITIONS)

Q2 — MANIPULATION (TRAP / LIQUIDITY GRAB)

Q3 — DISTRIBUTION (SELLING OFF / TAKING PROFITS)

Q4 — REVERSAL OR CONTINUATION (TREND REVERSAL OR TREND CONTINUATION)

MAIN PHASES OF THE MARKET CYCLE

—

Q1 — ACCUMULATION

DURING THIS PHASE, THE MARKET USUALLY MOVES SIDEWAYS WITHIN A TIGHT RANGE — AS IF WAITING FOR SOMETHING.

BIG INVESTORS OR INSTITUTIONS QUIETLY ACCUMULATE POSITIONS, BUYING GRADUALLY WITHOUT DRAWING ATTENTION.

MEANWHILE, NEW OR INEXPERIENCED TRADERS OFTEN GET BORED BECAUSE PRICE SEEMS TO "GO NOWHERE."

📌 IF YOU CAN IDENTIFY Q1 EARLY, IT OFTEN SIGNALS THE BEGINNING OF A MAJOR MOVE.

KEY CHARACTERISTICS OF Q1:

PRICE MOVES INSIDE A TIGHT CONSOLIDATION RANGE

LIQUIDITY BUILDS UP ABOVE AND BELOW THE RANGE

COMMONLY FORMS DURING THE ASIA SESSION

EXTRA EXPLANATION:

THINK OF Q1 AS "THE CALM BEFORE THE STORM." SMART MONEY IS SLOWLY BUILDING POSITIONS AND PREPARING THE LIQUIDITY NEEDED FOR A STRONG MOVE LATER.

Q2 — MANIPULATION (TRAP / LIQUIDITY GRAB)

THIS IS THE PHASE WHERE THE MARKET STARTS "PLAYING GAMES" WITH TRADERS.

AFTER ACCUMULATION, THE MARKET OFTEN TRICKS TRADERS INTO TAKING THE WRONG SIDE. FOR EXAMPLE, PRICE MAY SPIKE ABOVE A PREVIOUS HIGH OR BELOW A PREVIOUS LOW TO TRIGGER STOP LOSSES — THEN QUICKLY REVERSE DIRECTION.

KEY CHARACTERISTICS OF Q2:

FREQUENT FAKEOUTS AND STOP HUNTS

CANDLES BECOME LONGER WITH STRONG MOMENTUM

OFTEN OCCURS DURING THE LONDON SESSION

EXTRA EXPLANATION:

Q2 IS THE PHASE WHERE MOST RETAIL TRADERS GET TRAPPED. THE MARKET GRABS LIQUIDITY FROM THOSE STOP LOSSES BEFORE MOVING TOWARD THE REAL INTENDED DIRECTION.

—

(QT) QUARTERLY THEORY

TEORI QUARTERLY (PENJELASAN MUDAH)

KONSEP UTAMA:

SETIAP MARKET — BAIK FOREX, EMAS, MAUPUN CRYPTO — BERGERAK DALAM POLA SIKLUS BERULANG.

DALAM SATU HARI, ATAU BAHKAN DALAM PERIODE PENDEK (MISALNYA 90 MENIT), HARGA BIASANYA MELEWATI 4 FASE UTAMA:

Q1 — AKUMULASI (MENGUMPULKAN / MEMBANGUN POSISI)

Q2 — MANIPULASI (PERANGKAP / PENGAMBILAN LIKUIDITAS)

Q3 — DISTRIBUSI (MENJUAL / AMBIL PROFIT)

Q4 — REVERSAL ATAU LANJUTAN TREND (PEMBALIKAN ARAH ATAU TREND CONTINUATION)

FASE UTAMA SIKLUS MARKET

...

Q1 — AKUMULASI (COLLECTING / BUILDING POSITIONS)

PADA FASE INI, MARKET BIASANYA BERGERAK SIDEWAYS DALAM RANGE KECIL — SEOLAH-OLAH "MENUNGGU SESUATU".

INVESTOR BESAR ATAU INSTITUSI MULAI MENGUMPULKAN POSISI, MEMBELI SECARA PERLAHAN TANPA MENARIK PERHATIAN.

TRADER BARU BIASANYA BOSAN KARENA HARGA TERLIHAT TIDAK BERGERAK.

👉 JIKA KAMU BISA MENGENALI Q1, ITU SERING MENJADI TANDA AWAL BAHWA PERGERAKAN BESAR AKAN SEGERA TERJADI.

CIRI-CIRI UTAMA Q1:

HARGA BERGERAK DALAM RANGE KETAT

LIKUIDITAS MENUMPUK DI ATAS DAN BAWAH RANGE

SERING TERJADI SAAT SESI ASIA

TAMBAHAN PENJELASAN:

FASE INI IBARAT "TENANG SEBELUM BADAI". SMART MONEY MULAI MEMBANGUN POSISI DIAM-DIAM DAN MEMANCING LIKUIDITAS AGAR CUKUP UNTUK PERGERAKAN BESAR BERIKUTNYA.

Q2 — MANIPULASI (TRAP / LIQUIDITY GRAB)

INI ADALAH FASE KETIKA MARKET MULAI "BERMAIN" DENGAN PARA TRADER.

SETELAH AKUMULASI, MARKET SERING MENJEBAK TRADER AGAR MASUK POSISI YANG SALAH. CONTOHNYA: HARGA SENCARA MENEMBUS HIGH SEBELUMNYA ATAU LOW SEBELUMNYA UNTUK MEMICU STOP LOSS, LALU BERBALIK CEPAT.

CIRI-CIRI UTAMA Q2:

FAKEOUT DAN STOP HUNT SERING TERJADI

CANDLESTICK PANJANG DAN MOMENTUM TIBA-TIBA KUAT

UMUMNYA TERJADI PADA SESI LONDON

TAMBAHAN PENJELASAN:

Q2 ADALAH AREA YANG PALING BANYAK MEMAKAN KORBAN. INILAH MOMEN KETIKA MARKET MENCAMBIL LIKUIDITAS DARI TRADER RITEL SEBELUM BERGERAK KE ARAH SEBENARNYA.

Q3 — DISTRIBUSI (SELL-OFF / TAKING PROFITS)

SETELAH BERHASIL MENJERAK BANYAK TRADER, PELAKU BESAR ATAU INSTITUSI MULAI MASUK KE FASE DISTRIBUSI — YAITU MEREKA MENJUAL POSISI YANG SEBELUMNYA MEREKA BANGUN SAAT HARGA SUDAH LEBIH TINGGI.

PADA FASE INI, MARKET BIASANYA MENUNJUKKAN TEKanan JUAL YANG KUAT ATAU MUNCUL TREn JELAS KE ARAH SESUNGGUHNyA.

CIRI-CIRI UTAMA Q3:

Aktivitas volume tinggi

Pergerakan tren kuat dan jelas

Sering terjadi pada sesi New York (AM)

Penjelasan Tambahan:

Q3 adalah momen di mana smart money keluar dari posisi, sehingga harga bergerak lebih agresif. Trader ritel yang masuk terlambat sering tertangkap oleh pergerakan cepat ini.
Q4 — REVERSAL / CONTINUATION (Pembalikan atau Lanjutan Tren)

Pada tahap ini, market mulai kehilangan momentum. Kadang terjadi reversal (pembalikan arah), dan kadang harga melanjutkan tren sebelumnya jika kekuatan trend masih cukup besar.

Ini juga menjadi fase di mana banyak trader kembali terkejut — terutama jika mereka tidak sadar market sudah memasuki kuartal keempat dari siklus.

CIRI-CIRI UTAMA Q4:

Muncul sinyal pembalikan seperti double top atau double bottom

Bisa juga berupa konsolidasi untuk membentuk siklus baru (Q1 berikutnya)

Umum terjadi pada sesi New York (PM)

Penjelasan Tambahan:

Q4 adalah fase transisi. Market sedang memutuskan apakah akan memulai siklus baru atau melanjutkan tren yang ada. Trader berpengalaman biasanya menunggu konfirmasi yang jelas sebelum ikut bergerak.

Siklus Harian (4 Fase Dalam 1 Hari) (GMT+7)

Session	Approx. Time	Phase	Market Behavior	Tierlist
Asia	00:00-06:00	Q1	Accumulation (sideways / quiet market)	C+
London	06:00-12:00	Q2	Manipulation (fakeouts / liquidity grab)	B+
Ney York (AM)	12:00-18:00	Q3	Distribution (sell-off / strong trend)	A+
Ney York (PM)	18:00-00:00	Q4	Reversal or continuation (new cycle formation)	S+

RINGKASAN KONSEP

Market bergerak dalam pola berulang:
Akumulasi → Manipulasi → Distribusi → Reversal / Kontinuasi.

Memahami sesi trading membantu kamu mengetahui fase apa yang sedang terjadi.

Trader yang sabar menunggu fase Q2 (Manipulasi) selesai biasanya memiliki peluang lebih besar untuk masuk mengikuti arah tren utama bersama smart money.

Q3—Distribution (Sell-off / Taking Profits)

After successfully trapping traders, big players or institutions begin to distribute — meaning they start selling their positions at the higher prices they previously pushed the market toward.

During this phase, the market often shows strong selling pressure or a clear directional trend as smart money exits their positions.

Key Characteristics of Q3:

High volume activity

Clear and strong trend movement

Often occurs during the New York (AM) session

Additional Explanation:

Q3 is the moment when smart money unloads their positions, causing the market to move aggressively. Retail traders who enter late often get caught in the fast sell-off.

Q4—Reversal / Continuation (Trend Reversal or Trend Continuation)

At this stage, the market usually starts to lose momentum. It may reverse (change direction), or it may continue the trend if the previous move remains strong.

This is also a phase where many traders get trapped again — especially if they lose track of which quarter of the cycle the market is currently in.

Key Characteristics of Q4:

Clear reversal signals such as double tops or double bottoms

Or consolidation, preparing for a new cycle (returning to Q1)

Often occurs during the New York (PM) session

Additional Explanation:

Q4 is a transition phase. The market is deciding whether to start a new cycle or extend the current trend. Experienced traders usually wait for strong confirmation before entering.

Daily Cycle (All 4 Phases Within One Day) (GMT+7)

Session	Approx. Time	Phase	Market Behavior	Tierlist
Asia	00:00-06:00	Q1	Accumulation (sideways / quiet market)	C+
London	06:00-12:00	Q2	Manipulation (fakeouts / liquidity grab)	B+
New York (AM)	12:00-18:00	Q3	Distribution (sell-off / strong trend)	A+
New York (PM)	18:00-00:00	Q4	Reversal or continuation (new cycle formation)	S+

SUMMARY OF THE CONCEPT

The market moves in a repeating cycle:

Accumulation → Manipulation → Distribution → Reversal/Continuation.

Understanding each session helps you identify which phase the market is currently in.

Traders who wait until the Manipulation phase (Q2) is finished often have a higher probability of entering in the direction of the main trend, aligned with smart money.

Quarterly Theory - Price Movement Cycle for Each Trading Session

QUARTERLY THEORY (QT) IS A CONCEPT USED TO ANALYZE PRICE BEHAVIOR ACROSS DIFFERENT MARKET SESSIONS, SUCH AS FOREX AND GOLD.

THIS THEORY EXPLAINS THAT EACH TRADING DAY FOLLOWS A REPEATING CYCLE THROUGH THE THREE MAIN PHASES:

Asia

LONDON

NEW YORK

EACH SESSION PLAYS A DIFFERENT ROLE IN FORMING THE OVERALL MARKET STRUCTURE.

Core Idea of Quarterly Theory

THE MARKET DOES NOT MOVE RANDOMLY.

INSTEAD, PRICE FOLLOWS A CONSISTENT RHYTHM DESIGNED TO:

CREATE LIQUIDITY

ATTRACT RETAIL TRADERS

ALLOW SMART MONEY TO EXECUTE LARGE BUY OR SELL ORDERS

IN SIMPLE TERMS, PRICE IS OFTEN MOVED INTENTIONALLY TO COLLECT LIQUIDITY BEFORE THE REAL DIRECTION BEGINS.

1 Buying

2

3 Selling

4

SHORT CONCLUSION

QUARTERLY THEORY HELPS TRADERS UNDERSTAND THAT

PRICE MOVES IN REPEATING CYCLES

EACH SESSION HAS A SPECIFIC ROLE

LIQUIDITY IS ALWAYS TAKEN BEFORE MAJOR MOVES

WHEN COMBINED WITH LIQUIDITY SIZED MARKET STRUCTURE, AND THE ALZHEIMER MODEL, QT BECOMES A POWERFUL TIMING FRAMEWORK. 🔥

IF YOU WANT

ULTRA-SHORT CHEAT SHEET

REAL BUY & SELL EXAMPLES

QT COMBINED WITH LIQUIDITY & SMI

How to Apply Quarterly Theory

- ✓ OBSERVE MARKET STRUCTURE WITHIN EACH SESSION (Asia, London, New York)
- ✓ USE THE MANIPULATION POINT (M) AS A CLUE FOR SMART MONEY ACTIVITY
- ✓ WAIT FOR PRICE TO ENTER DISTRIBUTION (D) OR ACCUMULATION (A) TO CONFIRM DIRECTION
- ✓ AVOID CHASING PRICE AT THE END OF A PHASE — TRADE WITH THE NEW CYCLE
- ✓ ONCE YOU UNDERSTAND THIS CYCLE, YOU WILL START TO SEE MARKET MOVES THAT MOST TRADERS MISS

PRICE CYCLE STRUCTURE (ANIMAL EXAMPLES)

1. BUYING CYCLE

A (ACCUMULATION): PRICE MOVES IN A RANGE WHILE BUY POSITIONS ARE BUILT

M (MANIPULATION): PRICE IS PUSHED DOWN BRIEFLY TO GAIN LIQUIDITY

D (DISTRIBUTION): STRONG UPWARD IMPULSE MOVE

X (CONTINUATION / RESET): CONSOLIDATION OR PREPARATION FOR THE NEXT CYCLE

2. BUYING CYCLE — VARIATION

MANIPULATION MAY BE DEEPER AND MORE AGGRESSIVE

AFTER ACCUMULATION IS COMPLETE, PRICE EXPANDS STRONGLY UPWARD

OFTEN CREATES HESITATION BEFORE THE ALZHEIMER MOVE

3. SELLING CYCLE

A (ACCUMULATION): PRICE RANGES AT HIGHER LEVELS (SELL PREPARATION)

M (MANIPULATION): PRICE IS PUSHED UP TO TAKE STOP LOSSES

D (DISTRIBUTION): STRONG DASHING IMPULSE MOVE

X (CONSOLIDATION BEFORE A NEW CYCLE BEGINS)

4. SELLING CYCLE — VARIATION

MANIPULATION OFTEN OCCURS NEAR THE HIGH

AFTER DISTRIBUTION, PRICE DROPS SHARPLY

MANY TRADERS ENTER TOO LATE, NEAR THE END OF THE MOVE

Quarterly Theory - Teori Siklus Pergerakan Harga di Setiap Sesi Trading

QUARTERLY THEORY (QT) ADALAH SEBUAH KONSEP YANG DIGUNAKAN UNTUK MEMONITOR PERILAKU HARGA DI DALAM BERBAGAI PASAR, SEPERTI FOREX ATAU GOLD.

TEORI INI MENJELASKAN BAHWA SETIAP HARI TRADING MEMILIKI SIKLUS YANG BERJALAN MELALUI DUA SESI UTAMA.

ASIA

LONDON

NEW YORK

SETIAP SESI MEMILIKI PERANG YANG BERBEDA DALAM MEMBENTUK STRUKTUR MARKET SECARA KESELURUHAN.

PRINSIP UTAMA QUARTERLY THEORY

MARKET TIDAK BERGERAK SECARA ACAK.

SEDAL POKYA, PERGERAKAN HARGA MENICU DARI BEBERAPA KONSEP, YANG BERTURUTAN UNTUK

MENYINGKAT LIKELIHOOD

MENYALAKAN TRADER BERTAHAP MASUK KE MARKET

MEMBERI RUANG BACA SMART MONEY UNTUK MENGEKSPLOSI BUY AND SELL DENGAN GUKURAN BESAR

DENGAN KATA LAIN, PERGERAKAN HARGA MEMILAI "DIRANGSANG" UNTUK MEMERIKSA LIKELIHOOD SEBELUM AKHIR SEBENARNYA BERJALAN.

STRUKTUR SIKLUS HARGA (ZONING VISUAL)

1. BUYING CYCLE (SIKLUS NAIK)

A (ACCUMULATION) - HARGA MENCIKAT RANGE, MARKET MENUMPULKAN POSISI BUY

M (MANIPULATION) - HARGA DITURUNKAN SEMENTARA UNTUK AMIL LIKELIHOOD

D (DISTRIBUTION) - HARGA NAIK KEMUDIAN (IMPULS UTAMA)

X (CONTINUATION/RESET) - KONSOLIDASI ATAU PERSIAPAN SIKLUS BERIKUTNYA

2. Selling Variation

HARGA BISA TURUN LEBIH DALAM MASA MANIPULASI

SETELAH AKUMULASI SELESAI, MARKET NAIK SECARA

SEKING MENINGKAT TRADER KECIL SEBELUM HOKI BESAR TERJADI

3. SELLING CYCLE (SIKLUS TURUN)

A (ACCUMULATION) - RANGE DI ATAS PERSIAPAN SELL

M (MANIPULATION) - HARGA DINAikkan UNTUK AMIL STOP LOSS

D (DISTRIBUTION) - HARGA TURUN KEMUDIAN

X (CONTINUATION/RESET) - KONSOLIDASI SEBELUM SIKLUS BARU

4. SELLING VARIATION

MANIPULASI BISA TERDAPAT DI HOKI

SETELAH DISTRIBUSI SELESAI, MARKET DATUH DENGAN IMPULS TURUN

BANYAK TRADER MASUK TERLAMBAT DI KEMER PERGERAKAN

KESIMPULAN SINGKAT

QUARTERLY THEORY MEMBANTU TRADER MEMAHAMI BAHWA:

MARKET BERGERAK DALAM POLA BERJALAN

SETIAP SESI PUNYA FUNGSI BERBEDA

LIKELIHOOD BISA DIAMBIK SEBELUM HOKI BESAR TERJADI

TEKA DEKURANGAN DENGAN LIKELIHOOD SIKLUS MARKET STRUCTURE, DAN ALCHENIST MODEL QT MENJADI ALAT TRADING YANG SANGAT KUNCI 🔥

KUJAL MAU, SAKU BESAR

RENCANA SIKLUS HARGA (SHEET) 1 HALAMAN

BUKTI CONTOH ENTRY REAL BUY & SELL

CARA URAIAN DENGAN SNR + LIKELIHOOD SIKLUS

CARA MENGGUNAKAN QUARTERLY THEORY DALAM TRADING

- ✓ AWALI STRUKTUR MARKET DI SETIAP SESI (ASIA, LONDON, NEW YORK)
- ✓ GUNAKAN MANIPULATION POINT (M) SEBAGAI PETUNJUK ADANYA PERGERAKAN SMART MONEY
- ✓ TENGSEL HARGA MASUK KE FASE DISTRIBUTION (D) ATAU ACCUMULATION (A) UNTUK KONEKSIKAN AKSI
- ✓ HINDARI MENGGAM HARGA DI AKHIR FASE — TRADINGLAH BERJALAN SIKLUS BARU
- ✓ JIKA SUDAH MEMAHAMI SIKLUS INI, KAMU AKAN MULAI MELIHAT PERGERAKAN MARKET YANG SERING TERLAWAT DITOLAK KEBANYAKAN TRADER

Quarterly Theory — Chart Examples Explained

1. EXAMPLE 1 — BULLISH CYCLE (A + M + D + X)

IN THIS CHART, THE MARKET BEGINS WITH

A — ACCUMULATION PHASE

PRICE MOVES SIDEWAYS INSIDE A TIGHT RANGE. SMART MONEY IS QUIETLY BUILDING LONG POSITIONS.

M — MANIPULATION PHASE

THE MARKET DIPS BELOW THE ACCUMULATION ZONE TO CRAWL LIQUIDITY AND TRIGGER STOP LOSSES. THIS FAKE BREAKDOWN PREPARES THE LIQUIDITY NEEDED FOR THE REAL MOVE.

D — DISTRIBUTION PHASE (BULLISH DISTRIBUTION)

AFTER TAKING LIQUIDITY, PRICE BEGINS PUSHING UPWARD. HERE, "DISTRIBUTION" MEANS SMART MONEY STARTS RELEASING POSITIONS INTO A BULLISH MARKET WHILE CATCHING PRICE HIGHER.

X — EXPANSION (TREND PHASE)

A STRONG IMPULSIVE MOVE BREAKS OUT. THIS IS THE CLEAN BULLISH EXPANSION FOLLOWING THE MANIPULATION PHASE. MOST TRADERS MISS THIS MOVE BECAUSE THEY WERE TRAPPED DURING THE MANIPULATION.

2. EXAMPLE 2 — BULLISH REVERSAL CYCLE

HERE THE PREVIOUS CYCLE IS BULLISH BEFORE SHIFTING BEARISH.

X — PREVIOUS EXPANSION PHASE

PRICE IS STILL MOVING UP FROM THE LAST BULLISH TREND.

A — ACCUMULATION (TOP DISTRIBUTION AREA)

THE MARKET BEGINS TO LOSE UPWARD MOMENTUM AND FORMS A TOP RANGE.

M — MANIPULATION

A SHARP FAKE BREAKOUT ABOVE THE RANGE CREAS LIQUIDITY FROM BUYERS. THIS IS WHERE SMART MONEY FILLS THEIR SELL ORDERS.

D — DISTRIBUTION (BEARISH PUSH)

PRICE THEN REVERSES STRONGLY DOWNWARD, CONFIRMING THE NEW DIRECTION. THIS MARKS THE START OF THE BEARISH CYCLE.

SUMMARY OF ALL FOUR CHARTS

EACH EXAMPLE SHOWS THE SAME REPEATING STRUCTURE:

A + M + D + X

A = SMART MONEY BUILDS POSITIONS

M = LIQUIDITY CRAWL / TRAP

D = INTENTIONAL DIRECTIONAL MOVE

X = TREND EXPANSION

ONCE YOU UNDERSTAND THIS PATTERN, YOU CAN RECOGNIZE MARKET CYCLES ACROSS ANY TIMEFRAME OR SESSION.

3. EXAMPLE 3 — BEARISH CYCLE (A + M + D + X)

THIS EXAMPLE SHOWS QT IN A DOWNTREND

A — ACCUMULATION (FOR SHORT POSITIONS)

PRICE CONSOLIDATES AT THE TOP. SMART MONEY ACCUMULATES SHORT POSITIONS WHILE KEEPING THE MARKET STABLE.

M — MANIPULATION

A PUSH ABOVE THE RANGE OCCURS TO TAKE LIQUIDITY. RETAIL TRADERS ENTER LONG POSITIONS, THINKING A BREAKOUT IS COMING — BUT IT'S A TRAP.

D — DISTRIBUTION (BEARISH DISTRIBUTION)

PRICE QUICKLY REVERSES DOWNWARD. SMART MONEY BEGINS DISTRIBUTING (CLOSING) THEIR SHORTS AS THE MARKET MOVES LOWER.

X — EXPANSION (DOWNWARD)

A STRONG BEARISH TREND FOLLOWS, CREATING A CLEAN EXPANSION WAVE. THIS IS THE TRUE DIRECTION OF THE CYCLE AFTER MANIPULATION.

QUARTERLY THEORY — CHART EXAMPLES EXPLAINED

1. CONTOH 1 — SIKLUS BULLISH ($A + M + D + X$)

PADA CHART INI, PERGERAKAN MARKET DIMULAI DENGAN

A — ACCUMULATION (AKUMULASI)

HARGA BERGERAK SIDWAYS DALAM RANGEC SEMPIT. SMART MONEY MULAI MEMBANGUN POSISI BUY SECARA PERLAMA.

M — MANIPULATION (MANIPULASI)

HARGA TURUN LEBIH DALAM DARI AREA AKUMULASI UNTUK MENGAMBIL LIKUIDITAS DAN MEMBU STOP LOSS. INI ADALAH FASE BERANGKAS YANG MEMANGG CENGAM DILAKUKAN UNTUK MENYIMPULAKAN LIKUIDITAS.

D — DISTRIBUTION (DISTRIBUSI BULLISH)

SETELAH LIKUIDITAS DIDAPATKAN, HARGA MULAI BERGERAK NAIK KUAT. DISTRIBUSI DI SINI BERARTI SMART MONEY MELAPORKAN POSISI BUY SAMA, MENGERONG HARGA KE ATAS.

X — EXPANSION (FASE EKSPANSI / TREND)

TERJADI IMPULS BULLISH YANG BERHENTI. INILAH PERGERAKAN UTAMA YANG BIASANYA TIDAK TERLIHAT OLEH TRADER YANG TERBESAR DI FASE MANIPULASI.

2. CONTOH 2 — SIKLUS BULLISH REVERSAL

TREND SEBELUMNYA BULLISH, TAPI PASAR BERBALIK TURUN.

X — EKSPANSI DARI SIKLUS BULLISH SEBELUMNYA

HARGA NASH MELAKUKAN KEMUNDURAN DARI TREND SEBELUMNYA.

A — ACCUMULATION (TOP RANGEC)

MARKET MULAI KEHLANGAN MOMENTUM DAN MEMBENTUK RANGEC ATAS SEBAGAI AREA PEMBALIKAN.

M — MANIPULATION

TERJADI FASE BREAKOUT KE ATAS UNTUK MENGAMBIL LIKUIDITAS. DISINILAH SMART MONEY MENCIKSI ORDER SELL. HEBERKA.

D — DISTRIBUTION (DORONGAN BULLISH)

HARGA KEMUDIAN TURUN DENGAN KUAT, MENANDAI AWAL SIKLUS BARU YAITU BULLISH.

RINGKASAN SEMUA CHART

KEMPAT CONTOH MENUNJUKKAN POLA YANG SAMA:

$A + M + D + X$

A = SMART MONEY MEMBANGUN POSISI

M = PENGAMBILAN LIKUIDITAS / SEBAKAM

D = PERGERAKAN ARAH SEBELUMNYA

X = EKSPANSI TREND

SETELAH MEMAHAMI POLA INI, KAMU AKAN MULAI MELIHAT SIKLUS MARKET BERULANG PADA BERBAGAI SESI DAN TIMEFRAME.

2. CONTOH 3 — SIKLUS BULLISH REVERSAL

STRUKTUR DIMULAI DENGAN TREND TURUN, KEMUDIAN BERKULAWAR DENGAN MENGGANTI FASE QT.

X — EKSPANSI TREND SEBELUMNYA

MARKET MULAI BERGERAK TURUN SEBAGAI USA DARI SIKLUS SEBELUMNYA.

A — ACCUMULATION

HARGA MULAI MEMBENTUK DASAR (BASE), MENANDAI TEKAMUNGAN MELEMAH. SMART MONEY MULAI AKUMULASI POSISI BUY.

M — MANIPULATION

HARGA MELAKUKAN PENURUNAN YANG LEBIH DALAM UNTUK MENYAPU LIKUIDITAS DI BAWAH AREA A. INI MENEBAR SELLER YANG MENCIKSI TREND TURUN NASH BERLAMBAT.

D — DISTRIBUTION (DORONGAN BULLISH)

SETELAH PENYERAPAN LIKUIDITAS, HARGA MULAI RALLY KUAT KE ATAS. SMART MONEY MENYERAP POSISI DI TENGAH PERGERAKAN KEMUNDURAN INI.

3. CONTOH 3 — SIKLUS BULLISH ($A + M + D + X$)

CONTOH INI MENUNJUKKAN SIKLUS QT DALAM TREND TURUN.

A — ACCUMULATION (UNTUK POSISI SELL)

HARGA TIDAK KONSOLIDASI DI BAWAH ATAS. SMART MONEY MEMBANGUN POSISI SELL SELAMA FASE SIDWAYS INI.

M — MANIPULATION

HARGA MEMERUS SEDKIT DI ATAS RANGEC UNTUK MENGAMBIL LIKUIDITAS. TRADER RITEL MASUK BUY KARENA MENYANGKA BREAKOUT — PADAHAL ITU SEBAKAM.

D — DISTRIBUTION (DISTRIBUSI BULLISH)

HARGA BERBALIK TURUN DENGAN CEPAT. SMART MONEY MULAI MENYERAP POSISI SELL SERING PERGERAKAN TURUN.

X — EKSPANSI TURUN

TERJADI PENURUNAN KUAT (DESPANSI BULLISH). INI ADALAH ARAH SEBELUMNYA DARI SIKLUS SETELAH MANIPULASI SELESAI.

1.

2.

4.

Tabel Struktur Waktu dalam Quarterly Theory (QT)

phase / quarter	Detail Waktu (contoh):	Penjelasan sederhana:
Q1 Accumulation (A/O)	TAHUNAN: JANUARI – APRIL BULANAN: MINICYCLE-1 (FULL FIRST WEEK) MINICYCLE: SENIN HARIAN: Sesi ASIA (± 06:00–10:00) INTRADAY (M30) ASIA K2: 08:00–10:30 LONDON OPEN (LD): 00:00–01:30 NEW YORK (NY): 06:00–07:30 PM: 12:00–13:30	Q1 ADALAH AWAL SIKLUS MARKET. DI FASE INI MARKET MASIH TENANG DAN CENDERUNG MENGUMPULKAN POSISI (AKUMULASI). HARGA BELUM BERGERAK JAUH KARENA "ENERGI" SUDAH DISAPKAN UNTUK PERGERAKAN BESAR BERKUTINYA.
Q2 Manipulation/ high low (m/h-l)	TAHUNAN: APRIL – MEI (1 APRIL = TRUE YEARLY OPEN) BULANAN: MINICYCLE-2 (TRUE MONTHLY OPEN) MINICYCLE: SELASA (MULAI SENIN 18:00) HARIAN: Sesi LONDON (± 12:00–04:00) INTRADAY (M30) ASIA K2: 19:30–21:00 LD: 01:30–03:00 NY: 07:30–09:00 PM: 13:30–15:00	Q2 ADALAH FASE GERAKAN MARKET. SETELAH AKUMULASI, HARGA MULAI BERGERAK AGRESIF UNTUK MENJANGKAS LIKUIDITAS, SERING MERENTUK FASE BREAKOUT, HIGH FALSE, ATAU LOW PRESSU. BANYAK TRADER SALAH ASAH DI FASE INI.
Q3 distribution/ Low high (D/L-H)	TAHUNAN: MEI – NOVEMBER BULANAN: MINICYCLE-3 MINICYCLE: RABU HARIAN: NEW YORK SESSION (± 08:00–12:00 / PM 12:00–18:00) INTRADAY (M30) ASIA K2: 21:00–22:30 LD: 03:00–04:30 NY: 09:00–10:30 PM: 15:00–16:30	Q3 ADALAH FASE GERAKAN TERKUAL MARKET. DI SINI MARKET Mendistribusikan posisi. SERING TERJADI INFILS BESAR, PUNCAK HARGA, ATAU AWAL REVERSAL UTAMA.
Q4 Continuation/ Reset (C)	TAHUNAN: DESEMBER (PERSIAPAN SIKLUS BARU) BULANAN: MINICYCLE-4 MINICYCLE: KAMIS HARIAN: LONDON CLOSE (LC) INTRADAY (M30) ASIA K2: 22:30–00:00 LD: 04:30–06:00 NY: 10:30–12:00 PM: 16:30–18:00	Q4 ADALAH FASE PENYELESIAN SIKLUS. MARKET MULAI MELAMBAT RANGE MENGECEK, DAN BERSIAP SIKAT KEMBALI KE Q1 UNTUK SIKLUS BERKUTINYA.

RINGKASAN BESAR

MARKET BERGERAK BERURUTAN DALAM SIKLUS:

Q1 + Q2 + Q3 + Q4 = SIKLUS UTAMA Q

Q1: KUMPUL ENERGI (AKUMULASI)

Q2: AMBIL LIKUIDITAS (MANIPULASI)

Q3: GERAKAN UTAMA (DISTRIBUSI)

Q4: PENDIRINGAN & RESET

MEMAHAMI STRUKTUR INI MEMBANTU TRADER MENYESUAIKAN EXPECTASI DI SEMUA TIMEFRAME — DARI YEARLY, MONTHLY, WEEKLY, SAMPAI INTRADAY.

TIME STRUCTURE TABLE IN QUARTERLY TEORY (QT)

phase / quarter	Timeframe Detail Example	Simple explanation
Q1 Accumulation (A/O)	YEAR: JANUARY - APRIL MONTH: WEEK 1 (FULL FIRST WEEK) WEEK: MONDAY DAY: ASIA SESSION (APPROX: 06:00-12:00) INTRADAY (MRO): ASIA KZ: 18:00-19:30 LONDON OPEN (LO): 00:00-01:30 NEW YORK (NY): 06:00-07:30 PM: 12:00-13:30	Q1 MARKS THE START OF A NEW MARKET CYCLE. PRICE USUALLY MOVES IN A RANGE WHILE POSITIONS ARE BEING ACCUMULATED. THE MARKET IS BUILDING ENERGY BEFORE A LARGER MOVE OCCURS.
Q2 Manipulation/ high low (m/h-l)	YEAR: APRIL - MAY (APRIL 1 = TRUE YEARLY OPEN) MONTH: WEEK 2 (TRUE MONTHLY OPEN) WEEK: TUESDAY (FROM MONDAY 18:00) DAY: LONDON SESSION (APPROX: 12:00-16:00) INTRADAY (MRO): ASIA KZ: 19:30-21:00 LO: 01:30-03:00 NY: 07:30-09:00 PM: 13:30-15:00	Q2 IS WHERE THE MARKET MANIPULATES PRICE TO TAKE LIQUIDITY. FAKE BREAKOUTS, STOP HUNTS, AND FALSE HIGHS OR LOWS ARE COMMON. MANY TRADERS GET TRAPPED DURING THIS PHASE.
Q3 distribution/ Low high (D/L-H)	YEAR: MAY - NOVEMBER MONTH: WEEK 3 WEEK: WEDNESDAY DAY: NEW YORK SESSION (08:00-12:00 / PM 12:00-16:00) INTRADAY (MRO): ASIA KZ: 21:00-22:30 LO: 03:00-04:30 NY: 09:00-10:30 PM: 15:00-16:30	Q3 IS USUALLY THE STRONGEST MOVE OF THE CYCLE. THE MARKET EXPANDS AGGRESSIVELY AS LARGE PLAYERS DISTRIBUTE POSITIONS. MAJOR TRENDS, PEAKS, OR REVERSALS OFTEN APPEAR HERE.
Q4 Continuation/ Reset (C)	YEAR: DECEMBER (PREPARING FOR A NEW CYCLE) MONTH: WEEK 4 WEEK: THURSDAY DAY: LONDON CLOSE (LC) INTRADAY (MRO): ASIA KZ: 22:30-00:00 LO: 04:30-06:00 NY: 10:30-12:00 PM: 16:30-18:00	Q4 IS THE FINAL PHASE OF THE CYCLE. MOMENTUM SLOWS DOWN, VOLATILITY DECREASES, AND THE MARKET PREPARES TO RESET BACK INTO Q1.
SUMMARY THE MARKET MOVES IN A REPEATING QUARTERLY CYCLE: Q1 → Q2 → Q3 → Q4 → Q1 Q1: ACCUMULATION (BUILDING POSITIONS) Q2: MANIPULATION (LIQUIDITY GAMES) Q3: DISTRIBUTION (STRONG EXPANSION) Q4: SLOWDOWN AND RESET UNDERSTANDING THIS STRUCTURE HELPS TRADERS ANTICIPATE MARKET BEHAVIOR ACROSS ALL TIMEFRAMES — FROM YEARLY AND MONTHLY DOWN TO INTRADAY SESSIONS.		

THE MARKET DOES NOT MOVE RANDOMLY

THE MARKET DOES NOT MOVE RANDOMLY
EVERY PERIOD FOLLOWS THE SAME RHYTHM

ACCUMULATION + MANIPULATION + TRUE DIRECTION REVEALED + CONTINUATION OR REVERSAL

THIS IS WHAT WE CALL QUARTERLY THEORY (QT).

ONCE YOU UNDERSTAND THE BIG PICTURE, YOU CAN INSTANTLY RECOGNIZE:

WHICH PHASE THE MARKET IS IN

WHEN YOU SHOULD WAIT

AND WHEN IT IS TIME TO ACT

QT AND THE MODEL (PRECISION ENTRY TOOL)

AFTER UNDERSTANDING THE OVERALL MARKET STRUCTURE, THE TOOL THAT HELPS WITH ACCURATE ENTRIES IS THE MODEL.

THE MODEL IS A CONDENSED VERSION OF QUARTERLY THEORY, APPLIED DIRECTLY TO THE TIMEFRAME YOU TRADE.

THE CONCEPT IS SIMPLE:

BEFORE A STRONG MOVE, THE MARKET NEEDS A RESTING PHASE (ACCUMULATION)

DURING THE KILL ZONE, PRICE OFTEN CREATES A FAKE MOVE TO TAKE LIQUIDITY

AFTER LIQUIDITY IS TAKEN, PRICE RUNS IN THE TRUE DIRECTION

IDENTIFYING MARKET STRENGTH

ALL WE NEED TO CHECK IS:

WHETHER PRICE IS ABOVE OR BELOW THE TRUE OPEN

THIS IMMEDIATELY TELLS US WHICH SIDE HOLDS THE MAIN FORCE — BUYERS OR SELLERS.

ENTERING WITH SMART MONEY

NEXT, WE WAIT FOR PRICE TO REACH KEY ZONES WITHIN THE HIGHER TIMEFRAME FRAMEWORK:

POA (PREMIUM / DISCOUNT AREA)

ORDER BLOCKS (OB)

FAIR VALUE GAP (FVG)

OTHER LIQUIDITY AREAS

THIS IS WHERE SMART MONEY ENTERS, AND THIS IS WHERE WE FOLLOW.

👉 IN SHORT:

QT PROVIDES THE BIG MARKET CONTEXT

THE MODEL PROVIDES THE EXACT TIMING TO EXECUTE

Schematic

Why QT + Model Matters

When you understand both:

You won't get lost when the market is quiet

You won't chase fake moves

You'll know exactly when to enter when the market is truly ready to move

Final Note

At the end of this QT content, there is a model example that visually shows how all of these concepts work together on the chart.

MARKET TIDAK BERGERAK SECARA ACAK

MARKET TIDAK BERGERAK SECARA RANDOM
SETIAP PERIODE SELALU MENGUNTUNGNYA SAMA

ACCUMULATION + MANIPULATION + TRUE DIRECTION REVEALED + CONTINUATION / REVERSAL

INILAH YANG DISEBUT QUARTERLY THEORY (QT).

KETIKA KAMU MEMAHAMI GAMBARAN BESAR INI, KAMU BISA DENGAN CEPAT MEMCETAKHUI.

MARKET SEDANG BERADA DI FASE APA

KAPAN HARUS MENUMBUCCI

DAN KAPAN SAATNYA BERTINDAK

QT & MODEL (ENTRY TOOL)

SETELAH MEMAHAMI BIG PICTURE, ALAT YANG MEMBANTU ENTRY DENGAN PRECISI ADALAH MODEL.

MODEL INI ADALAH KERANGKA DARI QT, YANG DITERAPKAN LANGKUNG PADA TIMEFRAME YANG KAMU TRADING.

PRINSIPNYA SEDERHANA

SEBELUM HARGA BERGERAK KUAT, MARKET MEMBUTUHKAN FASE ISTIRAHAT (ACCUMULATION)

LAMPU SAAT FULL ZONE, MARKET MULAI FAKE MOVE / MANIPULASI UNTUK MENGAMBIL LIKUIDITAS

SETELAH ITU BARU HARGA BERALANKE ARAH SEBENARNYA

BUMBU ANALISIS ARAB

YANG PERLU KITA LIHAT HANYALAH

APAKAH HARGA BERADA DI ATAS ATAU DI BAWAH TRUE OPEN

DARI SINI KITA BISA MEMCETAKHUI SI MANA YANG MEMICAN KEKUATAN UTAMA (BUYER ATAU SELLER).

ENTRY BERILAH SMART MONEY

SELAIN ITU

TUNGGU HARGA MENCAIRI ZONA PENTING DALAM KERANGKA BESAR.

👉 SINGKAT NYA:

QT MEMBERI KITA ARAH DAN KONTEKS BESAR

MODEL MEMBERI KITA TIMING ENTRY YANG TEPAT

MAKINAT JIKA MEMAHAMI QT + MODEL

JIKA KAMU MEMAHAMI SEDUANYA:

KAMU TIDAK AKAN BINGUNG SAAT MARKET SERI

TIDAK AKAN MENGEJAR FAKE MOVE

TAHU KAPAN ENTRY SAAT MARKET BENAR-BENAR SIAP BERGERAK

PENUTUP

DI AKHIR MATERI QT INI, TERDAPAT CONTOH MODEL YANG MENUNJUKKAN BAGAIMANA
SEMUA KONSEP INI BERBESIT SAMA SAMA DICHART.

QUARTELY THEORY

FASE IDEAL

SIENARIS

Q1 - [A] Akumulasi
Market bergerak range / sideways (jika posisi)

Q2 - [M] Manipulasi (jika ditradingkan)
Terdapat fase move / pengambalan urutan.
Biasanya ini fase terbaik untuk entry.

Q3 - [D] Distribusi (jika ditradingkan)
Pergerakan utama dimulai (expansion / impulse).

Q4 - [X] Lanjutan / Reversal dari kuartal sebelumnya.
Market mulai melemah atau bersiap masuk siklus baru.

SIENARIS 2 (ALTERNATIF)

Q1 - [X] Lanjutan / Reversal dari kuartal sebelumnya.

Q2 - [A] Akumulasi

Q3 - [M] Manipulasi (jika ditradingkan)

Q4 - [D] Distribusi (jika ditradingkan)

TRUE OPEN

TRUE OPEN ADALAH AWAL DARI Q2 DI SETIAP SIKLUS.

DIGUNAKAN UNTUK:

MEMUKUR ARAH JELAS SANGAT

MEMENYURAI BIAS MARKET

Q3 → NY (8-12)
Q4 → NY PM (12-6)

SESSION CYCLES

To get the session cycles, start at each session starting time, and split it up into 40 min intervals.

**DAILY BIAS PART 1:

INTERNAL & EXTERNAL RANGE LIQUIDITY**

What RL and RL are for is to help in determining how they should not be used in trading

Pregradi RL & RL

Dua konsep ini adalah konsep untuk membantu kemampuan anticipatory trading, yaitu membaca arah harga dan memaknai kemungkinan harga kemungkinan besar akan bergerak.

Salah satu elemen pertama yang harus dipahami adalah bahwa harga 'WTAU' melakukan salah satu dari dua hal berikut:

Mencari likuiditas di luar Swing High / Swing Low / External Range Liquidity - (ERL)

Mencari Fair Value, yaitu menyambung kembali dengan Internal Range Liquidity - (IRL)

Harga Berbicara Falsud

Konsep-konsep ini berlaku di semua timeframe, namun akan lebih bermakna di timeframe yang lebih tinggi.

Pada timeframe rendah, pergerakan harga cenderung lebih berdefiasi, itulah sebabnya konsep ini sangat efektif untuk membangun bias HTF (Higher Timeframe Bias).

External Range Liquidity (ERL)

ERL ditentukan oleh Swing High dan Swing Low, tempat likuiditas likuiditas berada.

Setelah harga menganti ERL, tidak likuiditas berlanjut ke IRL.

Cara Menentukan if range RL (ERL)

Untuk mengidentifikasi ERL dan IRL, pertama kita harus menentukan di mana harga saat ini berkembang swing terakhir.

Cara nya adalah dengan mengidentifikasi:

Swing High terbaru

Swing Low terbaru

Di sini dapat dilihat bahwa setelah harga menganti Swing Highd RL, pada akhirnya harga masuk ke IRL, dan dari IRL, harga kembali bergerak menuju ERL.

Internal Range Liquidity (IRL)

IRL ditentukan oleh inklusi dari FVG / Fair Value Gap.

Setelah harga masuk ke IRL, tidak likuiditas akan bergerak kembali ke IRL.

Nilai Sifat Pergerakan Harga

Harga cenderung beresensi antara dua jenis likuiditas ini.

Harga tidak bergerak lebih jauh dari area ini.

Apakah harga memukul line ekspansi dan bergerak lebih lanjut, harga lebih menarik kembali untuk kembali ke area ini.

Sangat wajar jika harga kembali ke FVG yang signifikan dan range harga yang telah diidentifikasi.

Identifikasi FVG

Ketika RL gagal memberikan Fair Value dan memanti tidak valid, maka akan likuiditas kembali ke Swing High / Swing Low yang sebelumnya.

Saat FVG gagal, ia bertindak sebagai Internal Vg dan selanjutnya berfungsi sebagai support atau resistance dari sisi berikutnya.

DAILY BIAS

internal & external range liquidity

@babaylova

DAILY BIAS PART 1: INTERNAL & EXTERNAL RANGE LIQUIDITY

While ERL and IRL are both concepts in determining bias, they should not be used in isolation.

Introduction to IRL & ERL

These two concepts are fundamental for building anticipatory skills—making price move first and understanding where price is most likely to be drawn.

One of the first dynamics to understand is that price is ALWAYS doing one of two things:

Seeking liquidity beyond a Swing High or Swing Low (External Range Liquidity - ERL)

Seeking Fair Value by rebalancing an imbalance (Internal Range Liquidity - IRL)

Price is Fractal

These concepts work on all timeframes, but they are respected more on higher timeframes.

Lower timeframes tend to show suggested moves, while on higher timeframes these concepts are highly effective for finding a Higher Timeframe Bias.

External Range Liquidity (ERL)

ERL is defined by Swing Highs and Swing Lows where liquidity pools reside.

After price takes ERL, the draw on liquidity shifts toward IRL.

Internal Range Liquidity (IRL)

IRL is defined by imbalances, also known as Fair Value Gaps (FVGs).

After price moves into IRL, the draw on liquidity shifts back toward ERL.

How to Frame IR & ERL

To identify ERL and IRL, we first determine the current trading range using the most recent price leg. This is done by identifying the most recent Swing High and the most recent Swing Low. As shown, after price takes the Swing High ERL, it eventually moves into IR, and from IR, price continues toward ERL again.

Cyclical Nature of Price

Price tends to move from between these two types of liquidity.

Price does not move in a straight line up or down.

When price enters an expansion phase and moves too quickly, it needs to pull back and reassess value.

It is natural for price to return to FVGs or the equilibrium of an imbalanced price range.

FVG Localization

When IRL fails to provide Fair Value and becomes imbalanced, the draw on liquidity shifts back to the Swing High or Swing Low that created it.

Once an FVG fails, it becomes an Inverted FVG and is expected to act as support or resistance from the opposite side.

Contoh IRL & ERL (Timeframe Weekly)

Weekly Chart**

Harga awalnya bergerak naik, lalu mengalami draw FVG hingga IRL. Ketika IRL gagal, area tersebut berubah lagi menjadi resistance, sehingga harga kembali IRL menuju ERL, sampai akhirnya mencapai Monthly IRL.

Setelah harga masuk ke Monthly IRL, sekaligus mengambil Weekly ERL, harga memberikan reaksi dan kembali bergerak ke Weekly Internal Range Liquidity.

Due to a retrace bar, harga melakukan pengisian dengan pola IR, ke ERL pada timeframe Weekly, harga akhirnya mencapai Monthly IRL.

Setelah masuk ke Monthly IRL, terbentuk Weekly Market Structure Shift (MSS) dan harga melanjutkan kenaikan dalam kondisi MIMM hingga.

Contoh ini menunjukkan dengan jelas hubungan antar timeframe Weekly dan Monthly, dimana waktu timeframe besar menentukan arah utama, sedangkan timeframe lebih kecil menjadi panduan kelanjutan pergerakan harga.

INSTITUTIONAL ORDER FLOW

HIGHER TIMEFRAME INSTITUTIONAL ORDER FLOW (IOF) IS ONE OF THE MOST IMPORTANT TOOLS FOR IDENTIFYING CURRENT MARKET DIRECTION AND PARTICIPATING IN MAJOR MARKET MOVES.

1. INTRODUCTION BY INSTITUTIONAL ORDER FLOW

INSTITUTIONAL ORDER FLOW REFERS TO PRICE MOVEMENT DRIVEN BY LARGE PARTICIPATION, USUALLY PRIMARILY VISIBLY ON THE MONTHLY, WEEKLY, AND DAILY TIMEFRAMES.

THIS IS WHERE THE LARGEST MARKET MOVES OCCUR, AS BANKS AND LARGE FUNDS OPERATE AT THESE LEVELS. THIS IS WHY MARKETS MOVE WITH STRONG MOMENTUM.

ONCE KEY MONTHLY AND WEEKLY LEVELS (PD ARRAYS) ARE IDENTIFIED, THEY ARE USED AS THE ONLY TIMEFRAME TO:

1. ANALYZE MAJOR MOVES IN MARKET SENTIMENT, OR

2. LOOK FOR TREND CONTINUATION OPPORTUNITIES.

INSTITUTIONAL ORDER FLOW ALLOWS US TO UNDERSTAND:

WHERE PRICES GOING HEADS NEXT, AND

WHICH PRICE LEVELS ARE BEST USED TO TRADE HIGH-PROBABILITY TRADES.

THE MARKET USES THESE LEVELS TO REMOVE PARTICIPANTS FROM THEIR POSITIONS OR USE THEM AS COUNTERPARTS TO SECURE MOVING INTO ITS INTENDED DIRECTION.

Quick Summary

1. MONTHLY ORDER FLOW REVEALS INSTITUTIONAL INTENT

PD ARRAYS ACT AS PRICE TARGETS

STH + ITH + LTH SHOWS DIRECTIONAL BIAS/INTENT

HIGHER TIMEFRAME CLOSE DIRECTION, LOWER TIMEFRAME PROVIDES EXECUTION

2. PREMIUM OF DISCOUNT ARRAYS (PD ARRAYS)

PRICE IS ALWAYS MOVING TOWARD A PD ARRAY DUE TO ITS IDENTIFY WHICH PD ARRAY PRICE IS CURRENTLY DRAWN TO.

PRICE MAY:

1. REACT FROM A PD ARRAY, OR

2. CONTINUE MOVING TOWARD IT.

THE MAIN PD ARRAYS INCLUDE:

FAIR VALUE GAP (FVG)

SWING HIGH AND SWING LOW

BREAKER BLOCKS

MOLECULAR BLOCKS

ORDER BLOCKS

AMONG THESE, FAIR VALUE GAPS AND SWING HIGH/LOW ARE THE MOST IMPORTANT IN TERMS OF DRAWING LIQUIDITY.

3. RESPECT AND DISRESPECT OF PD ARRAYS

WHEN THE MARKET RESPECTS A PD ARRAY, IT MEANS:

1. DIRECTION OF CURRENT DIRECTIONAL BIAS, OR

2. IDENTIFY AN EARLY SHIFT IN MARKET DIRECTION.

WHEN PD ARRAYS BEGIN TO BE DISRESPECTED, IT OFTEN SIGNALS THAT A CHANGE IN DIRECTION MAY BE DEVELOPING.

4. ADVANCED MARKET STRUCTURE

SHORT-TERM HIGH / LOW (STH / STL)

AN STH FORMS WHEN A HIGH HAS ONE LOW OR HIGH ON EACH SIDE. THE OPPOSITE APPLIES FOR AN STL (SHORT-TERM LOW).

INTERMEDIATE-TERM HIGH / LOW (ITH / ITL)

AN ITH FORMS WHEN A HIGHER HIGH HAS ONE SHORT-TERM HIGH ON EACH SIDE.

TYPICALLY, ITH / ITL ARE NOT EXPECTED TO BE VIOLATED UNLESS THERE IS A CLEAR STRUCTURAL SHIFT.

LONG-TERM HIGH / LOW (LTH / LTL)

A LTH IS A LTH FORMS FROM A HIGHER TIMEFRAME LEVEL.

ONCE A LTH IS CONFIRMED, IT IS EXPECTED TO REMAIN INTACT UNTIL PRICE REACHES AN OPPOSING HIGHER TIMEFRAME DRAW-ON LIQUIDITY.

Penjelasan Institutional Order Flow - Versi Line Chart

1. MARKET STRUCTURE SHIFT (MSS)

MARKET STRUCTURE SHIFT (MSS) MERUPAKAN PERUBAHAN KURVA ORDE, BUKAN HANYA BULLISHKE BERNYAH MAUPUN DARI BEARISH KE BULLISH.

JIKA SEBELUMNYA HARGA BERGERAK TURUN, MAKA MSS BERARTI HARGA BERGERAK DIATAS DARI BEARISH KE BULLISH. JIKA SEBELUMNYA HARGA BERGERAK TURUN, MAKA MSS BERARTI HARGA BERGERAK DIATAS DARI BEARISH KE BULLISH.

IDEALNYA, SEBELUM HARGA MENCAKIL, SWING HIGH / SWING LOW (LAWAN, ITH / ITH) HARUS TERJADI. ADANYA STOP HARGA TERJADI DARI HARGA INI BERARTI DIBERIKAN BEARISH BLOCK.

2. Buy-Side or Sell-Side of the Curve

PERUBAHAN DARI BUY-SIDE KE SELL-SIDE ADALAH BERARTI DARI BUY-SIDE KE SELL-SIDE. KURVA BUY-SIDE ADALAH DARI SELL-SIDE KE BUY-SIDE. DARI SELL-SIDE KE BUY-SIDE ADALAH DARI SELL-SIDE KE BUY-SIDE.

DALAM ORDER FLOW BULLISH, PD ARRAY DISCOUNT ARRAY CENDERUNG DIBERIKAN (RESPECT). SEBALIKNYA PD ARRAY PREMIUM DIBERIKAN (DISRESPECT).

DALAM ORDER FLOW BEARISH, PD ARRAY PREMIUM ARRAY (DISRESPECT), SEBALIKNYA PD ARRAY DISCOUNT ARRAY DIBERIKAN.

DAILY BIAS WEEKLY PROFILES

1. INTRODUCTION TO WEEKLY PROFILES

WHEN USING WEEKLY PROFILES, WE ARE ESSENTIALLY ANTICIPATING HOW THE WEEKLY CANDLE IS LIKELY TO FORM BY USING EXPECTATIONS DERIVED FROM THE WEEKLY CHART AND APPLYING THEM TO THE DAILY TIMEFRAME.

IN SIMPLE TERMS, WE ARE LOOKING FOR THE HIGH OR LOW OF THE WEEK TO BE FORMED FIRST, BEFORE PRICE REVERSES IN THE OPPOSITE DIRECTION TO COMPLETE THE WEEKLY CANDLE. THIS PROCESS PROVIDES US WITH A DIRECTIONAL BIAS UNTIL PRICE REACHES AN OPPOSING HIGH/LOW TIME FRAME (HTF) LEVEL.

BY UNDERSTANDING HOW THE WEEKLY RANGE TYPICALLY DEVELOPS, WE CAN:

SET CLEAR DAILY EXPECTATIONS

MAINTAIN NARRATIVE ALIGNMENT

AVOID TRADING AGAINST THE WEEKLY STRUCTURE

2. SMT DIVERGENCE

SMT DIVERGENCE IS A HIGHLY EFFECTIVE TOOL WHEN USED ALONGSIDE WEEKLY PROFILES.

ITS ROLE IS TO:

CONFIRM THE HIGH OF THE WEEK IN A BEARISH CONTEXT

CONFIRM THE LOW OF THE WEEK IN A BULLISH CONTEXT

SMT ACTS AS STRONG CONFLUENCE BY HIGHLIGHTING RELATIVE WEAKNESS OR STRENGTH IN CORRELATED MARKETS.

CLASSIC EXPANSION (BULLISH SCENARIO)

IN THIS PROFILE, THE MARKET IS EXPECTED TO:

MOVE INTO AN HTF DISCOUNT ARRAY ON MONDAY OR TUESDAY

EXPAND IN THE DIRECTIONAL BIAS FOR THE REMAINDER OF THE WEEK

REACH AN OPPOSING HTF PREMIUM ARRAY BY THURSDAY OR FRIDAY

KEY CHARACTERISTICS:

MONDAY OFTEN PRINTS A SMALL BOUNCE OR CONSOLIDATION

IT FREQUENTLY FORMS THE LOW OF THE WEEK

STRONG EXPANSION BEGINS ONCE DIRECTION IS ESTABLISHED

MIDWEEK REVERSAL (BEARISH SCENARIO)

THIS PROFILE SUGGESTS:

MONDAY AND TUESDAY MAY TRADE HIGHER OR CONSOLIDATE BEHIND AN HTF PREMIUM / POA

WEDNESDAY BECOMES THE PIVOT POINT FOR REVERSAL

WEDNESDAY, THURSDAY, AND FRIDAY OFFER HIGH-PROBABILITY OPPORTUNITIES FOR

LIQUIDITY RUNS

EXPANSION TOWARD THE WEEKLY TARGET

THIS SETUP IS IDEAL FOR TRADERS FOCUSED ON STRUCTURE-BASED REVERSALS

CONSOLIDATION + THURSDAY REVERSAL (BULLISH SCENARIO)

TYPICAL BEHAVIOR:

MONDAY THROUGH WEDNESDAY PRICE REMAINS IN CONSOLIDATION

ON THURSDAY, PRICE SWEEPS THE INTRA-WEEK LOW INTO AN HTF DISCOUNT ARRAY

STRONG REJECTION FOLLOWS FROM THAT AREA

FRIDAY BECOMES A HIGH-PROBABILITY EXPANSION DAY IF THE WEEKLY TARGET HAS NOT YET BEEN REACHED

ADDITIONAL NOTES:

TUESDAY AND WEDNESDAY OFTEN ACT AS MILD PULLBACK DAYS

BEST ENTRIES APPEAR AFTER LIQUIDITY IS TAKEN

TGI FRIDAY (BEARISH SCENARIO)

DURING A CLASSIC EXPANSION WEEK:

PRICE EXPANDS THROUGH THURSDAY OR FRIDAY

A WEEKLY OBJECTIVE (HTF POA) IS ACHIEVED

ON FRIDAY, PRICE COMMONLY RETRACES 20-30% BACK INTO THE WEEKLY RANGE

IMPORTANT REMINDERS:

NOT EVERY DIRECTIONAL WEEK WILL PRINT A FRIDAY PULLBACK

HTF NARRATIVE AND CONTEXT ARE CRITICAL

AVOID FORGING TRADING WITHOUT STRUCTURAL CONFIRMATION

WEEKLY PROFILES EXAMPLE

CATATAN SINGKAT

Garis vertikal menunjukkan hari Senin, atau hari Selasa tiga hari Senin lebih.

Untuk TGI Friday, perhatikan minggu dengan Classic Expansion yang biasanya diakhiri dengan pullback pada hari Jumat.

Weekly Profiles akan digabungkan dengan konsep sebelumnya seperti ERL, RHL, Candle Body Close, SMT Divergence, dan Institutional Order Flow (OF) untuk mengidentifikasi peluang trading dan memberikan wawasan lebih lanjut tentang arah trading.

Penjelasan Chart (Versi Diperbarui)

Contoh ini menunjukkan bagaimana Classic Expansion dan Thursday Reversal terbentuk sepanjang minggu.

CLASSIC EXPANSION - LOW OF THE WEEK

LOW OF THE WEEK SERING TERBENTUK PADA HARI SENIN ATAU SELASA

PERCEPATAN AWAL MINGGU BIASANYA BERUPA AKUMULASI ATAU KOREKSI RINGAN

SETELAH KOREKSI TERBENTUK, HARGA MULAI BERGERAK SAMA SAMA MINGGUAN

KESIMPULAN UTAMA

Weekly Profiles membantu trader untuk:

MEMBERIKAN WAKTU TERBENTUKNYA HIGH DAN LOW MINGGUAN

MENYEDIAKAN ENTRI DENGAN TIRING INSTITUSIONAL

MENCINDEK TRADING YANG MELAMPAI MARI MINGGUAN

JIKA DIGUNAKAN DENGAN BENEK, WEEKLY PROFILES MEMBERIKAN STRUKTUR, TIMING, DAN GEDARAN DALAM SATU MINGGU TRADING

PERILAKU TENGAH MINGGU

SETELAH LOW TERBENTUK, HARGA BERGERAK NAIR DENGAN PULLBACK YANG TERKONTROL

PULLBACK INI UMUMNYA MENCINDEK POA / HTF LEVEL, MENANDAKAN KELAMBATAN TREND, BUKAN REVERSAL

THURSDAY REVERSAL

PADA MINGGU TERBENTUK, HARGA MENCAPAI EKSTREM SEBELUM TERJADI THURSDAY REVERSAL DI HARI KAMIS

BUKANNA REVERSI SETELAH UNDIKATNYA TERJADI DI HIGH/LOW/ANALISA MINOR

HARI KAMIS MENJADI HARI PIVOT: LAMBAT EKSPANSI ATAU MULAI DISTRIBUSI

CLASSIC EXPANSION - HIGH OF THE WEEK

HIGH OF THE WEEK SERING TERBENTUK DI AWAL MINGGU ATAU SETELAH EKSPANSI RINGAN

SETING TARGET MINGGUAN TERJADI AKUMULASI, MULAI MINGGUAN, MEMBERIKAN POTENSI RETRACE

PERILAKU HARI JUMAT

DALAM Skenario TGI Friday, harga sering kembali masuk ke minggu band

PULLBACK INI TIDAK SELALU TERJADI SETELAH MINGGU, SEHINGGA KONDISI HTF SANGAT PENTING

HARI JUMAT SERING DIGUNAKAN UNTUK MENGAMANKAN PROFIT DARI PADA ENTRY AKRESIF

WEEKLY PROFILES

EXAMPLE

Quick Notes

THE VERTICAL LINES REPRESENT MONDAY OR TUESDAY IN CASES WHERE MONDAY IS A HOLIDAY.

FOR TC1 FRIDAY FOCUS ON CLASSIC EXPANSION WEEKS THAT OFTEN END WITH A FRIDAY PULLBACK.

WEEKLY PROFILES, WHEN COMBINED WITH PREVIOUS CONCEPTS SUCH AS ERLINE, CANDLE BODY CLOSERS, SMT DIVERGENCE, AND INSTITUTIONAL ORDER FLOW (OF), HELP REMOVE MUCH OF THE SUBJECTIVITY IN TRADING AND PROVIDE A CLEAR, STRUCTURED FRAMEWORK.

CHART EXPLANATION (BEHIND)

THIS EXAMPLE ILLUSTRATES HOW CLASSIC EXPANSION AND THURSDAY REVERSAL PROFILES TYPICALLY UNFOLD THROUGHOUT THE WEEK.

CLASSIC EXPANSION - LOW OF THE WEEK

THE LOW OF THE WEEK IS COMMONLY FORMED ON MONDAY OR TUESDAY.

EARLY-WEEK PRICE ACTION IS OFTEN ACCUMULATIVE OR CORRECTIVE, SETTING THE FOUNDATION FOR EXPANSION.

ONCE THE LOW IS ESTABLISHED, PRICE BEGINS TO EXPAND IN THE WEEKLY BIAS DIRECTION.

MIDWEEK BEHAVIOR

AFTER THE LOW IS SET, PRICE CONTINUES HIGHER WITH CONTROLLED PULLBACKS.

THESE PULLBACKS USUALLY RESPECT PDW / HTF AWARES, CONFIRMING CONTINUATION RATHER THAN REVERSAL.

THURSDAY REVERSAL

IN SOME WEEKS, PRICE REACHES A TEMPORARY EXTREME AND SHOWS A THURSDAY REVERSAL.

THIS OFTEN HAPPENS AFTER LIQUIDITY IS TAKEN AT A SHORT-TERM HIGH OR LOW.

THURSDAY ACTS AS A DECISION DAY: EITHER CONTINUATION RESUMES OR DISTRIBUTION BEGINS.

KEY TAKEAWAY

WEEKLY PROFILES HELP TRADERS

ANTICIPATE WHEN HIGHS AND LOWS ARE LIKELY TO FORM ALIGN ENTRIES WITH INSTITUTIONAL TIMING.

AVOID OVERTRADING AGAINST THE WEEKLY NARRATIVE.

WHEN USED CORRECTLY, THEY PROVIDE STRUCTURE, TIMING, AND CLARITY TO THE TRADING WEEK.

CLASSIC EXPANSION - HIGH OF THE WEEK

THE HIGH OF THE WEEK FREQUENTLY FORMS ON MONDAY OR TUESDAY IN BEARISH EXPANSIONS, OR LATER IN THE WEEK AFTER STRONG BULLISH CONTINUATION.

ONCE THE WEEKLY OBJECTIVE IS REACHED, MOMENTUM SLOWS, SIGNALING POTENTIAL DISTRIBUTION OR RETRACEMENT.

FRIDAY BEHAVIOR

IN TC1 PROPER SCENARIOS, PRICE OFTEN RETRACES BACK INTO THE WEEKLY RANGE AFTER THE TARGET IS MET.

THIS PULLBACK IS NOT GUARANTEED EVERY WEEK—CONTEXT AND HTF NARRATIVE REMAIN CRITICAL.

FRIDAY SHOULD BE TRADED CAUTIOUSLY, FOCUSING ON PROFIT PROTECTION RATHER THAN AGGRESSIVE ENTRIES.

DAILY BIAS CHEAT SHEET

The main objective of defining a daily bias is to determine the likelihood of the next candle being bullish or bearish.

The key question is: Why is today or tomorrow a high-probability day for price to deliver to a target aligned with our bias?

Use the following five core concepts to define my daily bias:

DAILY BIAS

Framing a Narrative

Where is price coming from?

Where is price likely to go next?

Does the market have a reason to:

Move higher to target buy-side liquidity, or lower to target sell-side liquidity?

Move up or down to rebalance an imbalance?

1. Internal & External Range Liquidity

Are we moving from Internal Range Liquidity to External Range Liquidity?

Or from External Range Liquidity back to Internal Range Liquidity?

This helps determine whether price is in continuation mode or mean reversion.

2. Candle Body Close (PDH/L & PWH/L)

Did price close beyond the previous day's high or low?

Did price sweep the previous high/low and close back inside the range?

Do we have an Inside Day candle?

Candle closes provide critical insight into directional strength or weakness.

3. Institutional Order Flow

Do we currently have a bullish or bearish market structure?

Is price respecting or violating PD Arrays in alignment with the current direction?

This confirms whether price is aligned with institutional flow.

4. SMT Divergence

Do we have an SMT Divergence with a highly correlated market?

SMT helps identify potential weakness, strength or upcoming reversals.

5. Weekly Profiles

Have we confirmed the High or Low of the Week?

Weekly profiles align the daily bias with the higher-timeframe narrative.

Conclusion

Do we have a clear Drive on Liquidity, bullish or bearish?

If not, remaining neutral is the correct decision.

DAILY BIAS CHEAT SHEET

Panduan Menemukan Bias Harian

Tujuan utama dari menentukan daily bias adalah untuk mengetahui kemungkinan candle berikutnya akan bullish atau bearish.

Pertanyaannya: mengapa hari ini atau besok memiliki probabilitas tinggi untuk mencapai target sesuai bias kita?

DAILY BIAS

— Saya menggunakan 3 konsep utama berikut untuk menentukan daily bias.

Membaca Narasi (1 reading a Narrative)

Dari mana harga datang?

Ke mana harga kemungkinan bergerak selanjutnya?

Apakah market memiliki alasan untuk:

Naik untuk mengambil liquidity atau turun untuk selbide liquidity?

Bergerak naik/urun untuk menyeimbangkan imbalance?

1. Internal & External Range Liquidity

Apakah harga bergerak dari Internal Range Liquidity ke External Range Liquidity?

Atau dari External Range Liquidity ke Internal Range Liquidity?

Ini membantu menemukan apakah market sedang:

Melakukan pergerakan

Atau kembali ke area nilai intrin

2. Candle Body Close (PDHIL & PWHIL)

Apakah candle close melewati high/low hari sebelumnya?

Apakah harga mengambil high/low sebelumnya lalu close kembali di dalam range?

Apakah terbentuk Inside Day candle?

Penutupan candle memberi petunjuk kuat tentang kekuatan atau kelemahan arah.

3. Institutional Order Flow

Apakah struktur market saat ini bullish atau bearish?

Apakah harga mengkonfirmasi atau melanggar PD Arrays sesuai dengan arah pergerakan saat ini?

Ini membantu apakah market sejalan dengan arus institutional.

4. SMT Divergence

Apakah terdapat SMT Divergence dengan market lain yang memiliki korelasi tinggi?

SMT membantu mengidentifikasi potensi reversal atau kelemahan trend.

5. Weekly Profiles

Apakah High atau Low of the Week sudah terkonfirmasi?

Weekly profile membantu menjelaskan daily bias dengan konteks mingguan.

Kesimpulan

Apakah terdapat Draw on Liquidity yang jelas, bullish atau bearish?

Jika tidak ada kejelasan, maka tetap netral (no trade) adalah keputusan terbaik.

DAILY PROFILE

London reversal, ny continuation

- >ny reversal
- >ny manipulation & Explanation
- >new York judas
- >seek and destroy

Daily Profile #1: London Reversal, New York Continuation

This explanation focuses only on the London Session and New York AM Session.
The New York PM Session will be discussed separately.

Core Concept

London Reversal – NY Continuation is a classic expansion day profile.

Typically:

London creates the reversal

New York continues the core direction

This profile works best when a clear higher-timeframe bias is already established.

Bullish Scenario Overview

When the market has a bullish bias, the sequence usually develops as follows:

☀️ Midnight – Pre-London

Price opens from the midnight open

During early London, price is often manipulated lower

The purpose is to:

Collect liquidity

Form the Low of the Day (LOD)

London Session (Approx. 9:00 – 17:00 AM)

What we want to see:

Price moves into a Higher Timeframe Discount Array

A strong bullish reaction

Directional confirmation via:

MT5 CISO / MSS

Ideally, London prints the Low of the Day

☀️ In short:

London = manipulation + reversal phase

New York AM Session

Key times:

Forex: 7:00 – 16:00 AM

Indices: 8:30 – 11:00 AM

Expectations:

A secondary pullback lower

Price taps into an Intermediate Timeframe Discount Array

This often occurs around the CME Open (8:30 – 9:30 AM)

After that:

Price continues higher in line with the London direction

Targets a Higher Timeframe Premium Array

This move usually completes between 10:30 – 11:00 AM

Once targets are reached:

The market typically consolidates into lunch hours

High/Low of the Day behavior

If the Low of the Day forms during London (bullish bias)

The High of the Day is often printed

Between 11:00 – 12:00

Near the London Close

SMT Divergence

Ideally, during manipulation or pullbacks

An SMT Divergence appears on a correlated market

SMT is not mandatory, but:

It increases confirmation

Strengthens trade confidence

Quick Summary

London: Manipulation and reversal

New York AM: Continuation and expansion

HTF Bias: Critical

MT5 CISO/MSS: Primary entry confirmation

Profil Harian #1: London Reversal, NY Continuation

Di sini fokus pembahasan hanya pada sesi London dan New York AM.
Sesi New York PM akan dibahas terpisah.

SMT Divergence

Ideally, saat terjadi manipulasi akan tercapai:

Ada SMT Divergence dengan market manipulasi

SMT tidak wajib, tapi:

Menambah konfirmasi

Meningkatkan confidence entry

Ringkasan Singkat

London Manipulasi & reversal

NY AM Continuation & ekspansi

Bias HTF: Sangat penting

MT5 CSD/S&S: Trigger utama entry

Konsep Utama

London Reversal + NY Continuation adalah pola klasik dari ekspansi.
Biasanya market:

Berbalik arah di London

Melanjutkan arah utama di New York

Pola ini bekerja paling baik ketika kita sudah punya bias bullish atau bearish yang jelas dari timeframe besar.

Skenario Bullish (Contoh Utama)

Jika bias bullish, maka alurnya umumnya seperti ini:

🌙 Midnight – Awal London

Harga dibuka dari midnight open

Saat London berjalan, market sering dimanipulasi turun

Tujuanya untuk:

Mengambil likuiditas

Membentuk Low of the Day (LOD)

Sesi London (02:00 – 05:00)

Yang ingin dilihat:

Harga masuk ke HTF Discount Array (atau malah HTF)

Ada aksi naik yang jelas

Terjadi konfirmasi arah lewat:

MT5 CSD / S&S

London idealnya mencetak Low of the Day

🌞 Hina:

London = Low manipulasi + penentuan low

Sesi New York AM

Waktu utama:

Forex: 07:00 – 10:00

Indeks: 08:30 – 11:00

Ekspektasi:

Ada penurunan kecil lanjutan (pullback)

Harga masuk ke HTF Discount Array

Biasnya terjadi sekitar CME Open (09:30 – 09:30)

Setelah itu:

Harga lanjut naik searah bias London

Target menuju HTF Premium Array

Umumnya tercapai antara 10:30 – 11:00

Setelah target tercapai:

Market sering konsolidasi menjelang jam makan siang

High / Low of the Day

Jika LOD terbentuk di London bias bullish

Maka High of the Day (HOD) sering terbentuk

Antara 10:00 – 12:00

Mengulang London Close

Daily Profile #2: New York Reversal

Pembahasan ini hanya fokus pada Sesi London dan Sesi New York AM.
Sesi New York PM akan dibahas terpisah.

Konsep Utama

New York Reversal (NY Reversal) adalah pola harian dimana:

Sesi London gagal mencapai level HTF penting

Low atau High of the Day premium terbentuk di New York

Sesi New York menjadi sesi utama pembalikan dan ekspansi harga

Biasanya pola ini muncul saat London hanya membentuk range atau kompresi, bukan ekspansi penuh.

Skenario Bullish

Abrupton ketika market bullish:

Harga membuka dari midnight open

Saat London, harga bergerak umum tetapi:

Tidak memenuhi HTF Discount Array

Market menunggu likuiditas sebenarnya

Low of the Day (LOD) diperkirakan terbentuk setelah New York Open

Setelah itu, New York melakukan reversal dan ekspansi naik

Sesi London (07:00 - 11:00)

Yang ingin dilihat saat London:

Harga berada di bawah midnight open

Penggerak mengambang di atas HTF Discount Array

Tidak ada displacement kuat atau konfirmasi struktur

Menandakan London bukan penggerak utama hari ini

Intinya:
London = live persiapan, bukan reversal Sesi New York AM

Waktu penting:

Eurus: 07:00 - 11:00

Indeks: 08:30 - 11:00

Ekspektasi pergerakan:

Setelah UME Open (08:30 atau 09:30)

Harga di dalam zona ke HTF PD Array

Masuk ke zona diskon HTF + M15/30 sesuai

Terjadi reaksi kuat yang mengkonfirmasi

Low of the Day

M15 CSD / MSS

Setelah konfirmasi

Harga melanjutkan kenaikan

Target menuju HTF Premium Array

Ekspansi biasanya berlanjut hingga akhir NY AM

SMT Divergence

Saat manipulasi atau retracement:

Idratnya muncul SMT Divergence pada market kondisi

SMT tidak wajib, namun:

Menambah konfirmasi setup

Meningkatkan kepercayaan entry

Ringkasan Singkat

London: Range / kompresi / gagal ekspansi

New York AM: Reversal & ekspansi utama

Level HTF: Premium atau penting

M15 CSD / MSS: Konfirmasi entry utama

High / Low of the Day di New York

Jika Low of the Day terbentuk di New York (bullish):

High of the Day biasanya tertetak:

Antara pukul 14:00 - 15:00

Kadang berlanjut hingga pukul 16:00

Daily Profile #2: New York Reversal

This explanation focuses on the London Session and New York AM Session only.
The New York PM Session will be discussed separately.

Core Concept

NY Reversal is a daily profile where:

London fails to reach a key HTF level

The true Low or High of the Day is formed during New York

New York becomes the main reversal and expansion session

This profile commonly appears when London creates compression or inefficiency, not a full expansion.

Bullish Scenario Overview

In a bullish bias, the sequence generally looks like this:

Price opens at midnight

London trades lower but fails to reach a HTF Discount Array

The real Low of the Day (LOD) is expected after NY opens

New York then creates a reversal and expansion higher for the rest of the session

London Session (Approx. 2:00 – 5:00 AM)

What we want to see during London:

Price trades below the midnight open

Market moves above the HTF Discount Array

No strong displacement or confirmation

Indicates London is not the main driver

In short:

London = setup phase, not reversal

New York AM Session

Key times:

Forex: 7:00 – 10:00 AM

Indices: 9:30 – 11:00 AM

Expected behavior:

After 8:30 or 9:30 AM CME Open

Price pushes lower into a HTF PD Array

Enters a new HTF + M15/B1 PD Array

Strong reaction confirms

Low of the Day

M15 CUSD / M5S

After confirmation:

Price expands higher

Targets a Higher Timeframe Premium Array

Expansion often continues for the remainder of NY AM

SMT Divergence

During manipulation or replacement:

Ideally, we see an SMT Divergence on a confirmed market

SMT is not required, but:

Adds confirmation

Increases confidence in the setup

Quick Summary

London: Range, compression, or failed expansion

New York AM: Reversal + true expansion

HTF Levels: Key reference points

M15 CUSD/M5S: Primary confirmation tool

High / Low of the Day in New York

If the Low of the Day is confirmed during NY (bullish case):

The High of the Day typically forms:

Between 2:00 – 3:00 PM

Sometimes extends into 4:00 PM

Daily Profile #3: NY Manipulation & Expansion

Penjelasan ini hanya mencakup Sesi London dan Sesi New York AM.
Sesi New York PM akan dibahas terpisah.

Konsep Utama

NY Manipulation & Expansion adalah profil harian di mana:

Sesi London cenderung sideways / akumulasi

Manipulasi utama terjadi di New York

Sesudah manipulasi, market melakukan ekspansi ke arah bias

Profil ini adalah contoh jelas dari konsep AMD / Power of 3: Accumulation → Manipulation → Distribution (Expansion)

Skenario Bullish

Abrupton ketika bias bullish:

Harga membuka dari midnight open

Selama London, market konsolidasi dan tidak masuk ke HTF Discount Array

Harga seolah "menahan energi"

Saat New York buka, terjadi manipulasi main

Manipulasi ini mencetak Low of the Day

Sesudah L100 dikonfirmasi, market melakukan ekspansi naik hingga akhir sesi

Sesi London (08:00 - 17:00)

Karakteristik sesi London:

Harga bergerak dalam range / akumulasi

Tidak ada doming kuat ke zona diskon utama

Tidak ada konfirmasi smktr signifikan

Menandakan London bukan sesi reversal atau ekspansi

Intinya:
London = fase akumulasi

Sesi New York AM

Waktu penting:

Forex: 07:00 - 10:00

Indeks: 09:30 - 11:00

Ekspektasi pergerakan:

Sesudah NY Open (CME Open 09:30 atau 09:30)

Harga dimanipulasi main ke HTF PD Array

Masuk ke zona diskon

Terjadi reaksi naik yang jelas

Low of the Day dikonfirmasi dengan:

M15 CSD / MSS

Sesudah ini:

Market melanjutkan ekspansi naik

Target menuju HTF Premium Array

Biasanya berlanjut sampai akhir NY AM

SMT Divergence

Saat manipulasi atau retracement:

Idealnya muncul SMT Divergence pada market korrelasi

SMT tidak wajib, namun:

Memberi konfirmasi tambahan

Meningkatkan kepercayaan entry

Ringkasan Singkat

London: Akumulasi / konsolidasi

New York AM: Manipulasi → ekspansi

Konsep kunci: AMD / Power of 3

M15 CSD / MSS: Konfirmasi entry utama

Target: HTF Premium Array

High / Low of the Day di New York

Jika Low of the Day terbentuk di New York (bullish):

High of the Day umumnya terbentuk:

Antara pukul 14:00 - 15:00

Kadang berlanjut hingga pukul 16:00

Daily Profile #3: New York Manipulation & Expansion

This explanation focuses only on the London Session and the New York AM Session.
The New York PM Session will be discussed separately.

Core Concept

NY Manipulation & Expansion is a daily profile where:

The London Session consolidates or accumulates

The main manipulation occurs during New York

After manipulation, price delivers a strong expansion in line with the bias

London Session (Approx. 2:00 - 5:00 AM)

Key characteristics of London:

Price trades sideways (accumulation)

No strong displacement into discount zones

No meaningful structure confirmation

Confirms that London is not the reversal or expansion session

This profile is a clear example of AMD / Power of 3: Accumulation → Manipulation → Distribution (Expansion)
Bullish Scenario Overview

When the market has a bullish bias, the typical sequence is:

Price opens from the midnight open

During London, price remains in consolidation

London does not trade into a key HTF Discount Array

During New York, price is manipulated lower

This manipulation prints the Low of the Day

After confirmation, price expands higher for the rest of the session

✶ In short:

London = accumulation phase

New York AM Session

Key times:

Forex: 7:00 - 10:00 AM

Indices: 8:30 - 11:00 AM

Expected behavior:

After the NY Open / CME Open (8:30 or 9:30 AM)

Price is pushed lower into a HTF Discount Array

Enters a discount zone

A strong bullish reaction follows

The Low of the Day is confirmed via:

M15 C2SD / MSS

SMT Divergence

During manipulation or retracement:

Ideally, an SMT Divergence appears on a correlated market

SMT is not required, but:

Adds confirmation

Increases confidence in the setup

Quick Summary:

London: Accumulation / consolidation

New York AM: Manipulation → expansion

Key concept: AMD / Power of 3

M15 C2SD / MSS: Primary entry confirmation

Target: HTF Premium Array

High / Low of the Day in New York

If the Low of the Day forms during New York (bullish case):

The High of the Day usually prints:

Between 2:00 - 3:00 PM

Sometimes extends into 4:00 PM

After confirmation:

Price continues expanding higher

Targets a Higher Timeframe Premium Array

Expansion often lasts through the remainder of NY AM

Daily Profile #4: New York Judas

This explanation focuses only on the London Session and the New York AM Session.
The New York PM Session will be discussed separately.

SMT Divergence

During the manipulation or Judas swing:

Ideally, an SMT Divergence appears on a correlated market.

SMT is not required, but:

Adds confirmation

Increases confidence in the setup

Quick Summary

London: false continuation / engineered liquidity

New York AM: Judas move → reversal → expansion

Key trait: Sharp drop before strong rally

Confirmation: M15 CPO / MSS

Final target: HTF Premium Array

Core Concept

New York Judas is a daily profile where:

The market gives a false directional move during London

Price appears to follow the higher timeframe bias

During New York, price makes a sharp move in the opposite direction (the Judas swing)

After the trap, price reverses back into the true bias and expands strongly

This profile is often called the "Judas swing", as it traps early participants before the real move begins.

Bullish Scenario Overview

When the market has a bullish bias, the typical sequence is:

Price opens from the midnight open

During London, price moves higher in line with the bias

Price does not trade into a HTF Discount Array

The London move builds engineered liquidity above price

During New York:

Price drops sharply

Sweeps intraday liquidity

Trades into a 4H / HTF Discount PD Array

A strong bullish reversal follows

London Session (Approx. 2400 - 5000 AM)

Key characteristics of London:

Price rises without a healthy pullback

No clear manipulation into discount

The move is designed to:

Attract late buyers

Create liquidity above price

In short:
London = fake continuation / liquidity engineering

New York AM Session

Key times:

Forex: 7:00 - 10:00 AM

Indices: 8:30 - 11:00 AM

Expected behavior:

After the NY Open / CME Open (8:30 or 9:30 AM)

Price reprices sharply lower

Trades into a 4H or HTF Discount Array

A strong reaction confirms:

Smart Money Reversal

M15 CPO / MSS

After confirmation:

Price expands higher

Initial target is often the current day high

Final targets align with a HTF Premium Array

High / Low of the Day in New York

If the Low of the Day forms during New York (bullish cases)

The High of the Day usually prints:

Between 2400 - 3000 PM

Sometimes extends into 4:00 PM

DAILY PROFILE #5: SEEK AND DESTROY

Seek and Destroy is a daily market profile that often presents low-probability conditions, but that does not mean it cannot be traded. This profile usually reflects a market that lacks clear direction and is actively hunting liquidity.

London Session

Typically occurs between 2:00 AM - 8:00 AM

Price often takes both the high and low of the Asian range

Fails to deliver strong displacement in either direction

This behavior suggests:

A lack of clear market direction

Additional confirmation is required before entering trades

> These specific times were learned through experience from TTTrades.

New York Session

Ideally, wait for the 9:30 AM CME Open

Price is expected to move into a HTF or Daily PD Array

Afterward, price often returns back into the trading range

How to hunt for setups:

Execute trades at extreme levels

After a range high or low has been taken

Conservative targets:

Equilibrium (midpoint of the range)

Aggressive targets:

The opposite side of the Seek and Destroy range

Daily Candle

High: The highest price of the day

Low: The lowest price of the day

Open: The daily opening price

Close: The daily closing price

In a Seek and Destroy environment, price tends to move back and forth, taking liquidity on both sides before showing its true intent.

Asian Range

The range formed during the Asian session, which often acts as the initial liquidity pool.

Both the Asian high and low are commonly swept during the London or New York sessions.

HTF Premium & Discount Array

HTF Premium Array: Expensive area (buy-side interest)

HTF Discount Array: Cheap area (sell-side interest)

In a Seek and Destroy profile, price frequently visits both premium and discount areas without immediately trending.

M15 Timeframe

The primary execution timeframe used to identify:

Manipulation

Liquidity sweeps

Entries at extreme levels

Opportunities

1st Opportunity: Often appears after the first liquidity grab (commonly a false move)

2nd Opportunity: A secondary chance once price action becomes clearer and more structured

Detailed Explanation

Introduction to Seek & Destroy

This profile usually appears when:

There is no clear directional bias on higher timeframes

The market is waiting for a catalyst, such as a high-impact economic release

During Seek and Destroy conditions:

The market takes liquidity on both sides

This can happen multiple times

There is no fixed order for which side (high or low) is taken first

The key difference between a bullish or bearish Seek and Destroy profile is where price closes, not the sequence of liquidity grabs. The main focus is having a Higher Timeframe (HTF or Daily) PD Array that sponsors price to return back into the range.

SMT Divergence

Commonly appears during manipulation or consolidation

Used to align with directional bias

Usually observed between correlated assets

SMT divergence is not mandatory, but:

It significantly increases trade confidence

Especially in unclear or choppy market conditions

DAILY PROFILE #5: SEEK AND DESTROY

Seek and Destroy adalah profil harian yang sering muncul dengan probabilitas rendah, tetapi bukan berarti tidak bisa diradingkan. Profil ini biasanya menunjukkan market yang "bersik" dan belum memiliki arah jelas.

London Session

Terjadi sekitar 02:00 – 08:30

Harga sering mengambil high dan low Asian Range

Namun gagal melanjutkan arah tidak displacement kuat

Ini menyandakan:

Market belum punya arah jelas

Pertukaran informasi tambahan sebelum entry

► Catatan: Jan-jan ini diperoleh dari pengalaman TT Trades

New York Session

Ideal menunggu CME Open 09:30

Harga biasanya bergerak ke HODaily PD Array

Setelah itu, harga sering kembali masuk ke trading range

Cara mencari setup:

Entry di area ekstrem

Setelah high/low range diambil

Target aman:

Equilibrium titik tengah range

Target agresif:

Sisi sebaliknya dari Seek & Destroy range

Daily Candle

High: Harga tertinggi hari ini

Low: Harga terendah hari ini

Open: Harga pembukaan harian

Close: Harga penutupan harian

Harga cenderung bergerak bolak-balik untuk mengambil likuiditas sebelum arah sebenarnya terlihat.

Asian Range

Range yang terbentuk saat sesi Asia, biasanya menjadi area awal pengambilan likuiditas. High dan low Asia sering disapu (sweep) pada sesi London atau New York.

HTE Premium & Discount Array

HTE Premium Array: Area merah (potensi sell)

HTE Discount Array: Area merah (potensi buy)

Dalam profil S&D, harga sering menyentuh kedua area ini tanpa langsung trending.

M15 Timeframe

Timeframe eksekusi utama untuk membaca:

Manipulasi

Liquidity sweep

Entry di area ekstrem

Opportunity

1st Opportunity: Biasanya setelah likuiditas pertama diambil (sering fake move)

2nd Opportunity: Peluang lanjutan setelah market menunjukkan reaksi yang lebih jelas

Penjelasan Detail

Intro to Seek & Destroy

Profil ini biasanya muncul ketika:

Tidak ada arah jelas di timeframe besar (H1/H4)

Market menunggu katalis penting misalnya news berdampak tinggi

Saat kondisi Seek & Destroy:

Market mengambil likuiditas di kedua sisi

Bisa terjadi berulang kali

Tidak ada urutan pasti antara ambil high atau low dulu

Perbedaan bullish dan bearish bukan dari urutan, tetapi dari di mana harga close. Fokus utama adalah adanya HTE (H1 atau Daily) PD Array yang mendorong harga kembali ke dalam range.

SMT Divergence

Terjadi saat ada manipulasi atau konsolidasi

Dipakai untuk menyamakan bias

Idealnya ada perbedaan arah dengan aset yang berkorelasi

SMT tidak wajib, tapi

Sangat membantu meningkatkan confidence entry

Tentunya saat market tidak jelas arahnya

Kata Pengantar

Buku ini tidak ditulis untuk menjanjikan kepastian, melainkan untuk membangun pemahaman. Pasar keuangan tidak bergerak secara acak, tetapi juga tidak bisa diprediksi dengan sempurna. Di dalamnya ada struktur, likuiditas, dan koneksi yang hanya dapat dibaca dengan ketenangan, disiplin, dan pengalaman.

Setiap konsep yang dibahas—mulai dari likuiditas, struktur pasar, hingga perilaku harga dalam berbagai sesi—bertujuan membantu pembaca melihat market dengan sudut pandang yang lebih objektif. Namun, pemahaman sejati tidak lahir dari membaca saja, melainkan dari proses mengamati, menguji, dan mengevaluasi diri secara konsisten.

Gunakan buku ini sebagai panduan berpikir, bukan sebagai aturan mutlak. Adaptasikan dengan karakter, psikologi, dan manajemen risiko Anda sendiri. Kesabaran, konsistensi, dan kemampuan menerima ketidakpastian adalah fondasi utama dalam perjalanan seorang trader.

Semoga buku ini menjadi refleksi yang bermanfaat, membuka cara pandang baru, dan membantu Anda melangkah lebih terstruktur dalam memahami pergerakan pasar.

Selamat belajar, bertumbuh, dan terus menyempurnakan proses.
