

My "Rare" SnR Course:

Not Found Anywhere!

Basics of SnR

SUPPORT levels are considered as the price levels where demand is expected to be strong enough to prevent further price decline.

RESISTANCE levels are price levels where selling pressure is anticipated to be strong enough to impede further price increases.

Here is how SnR level forms the candlestick patterns:

SUPPORT

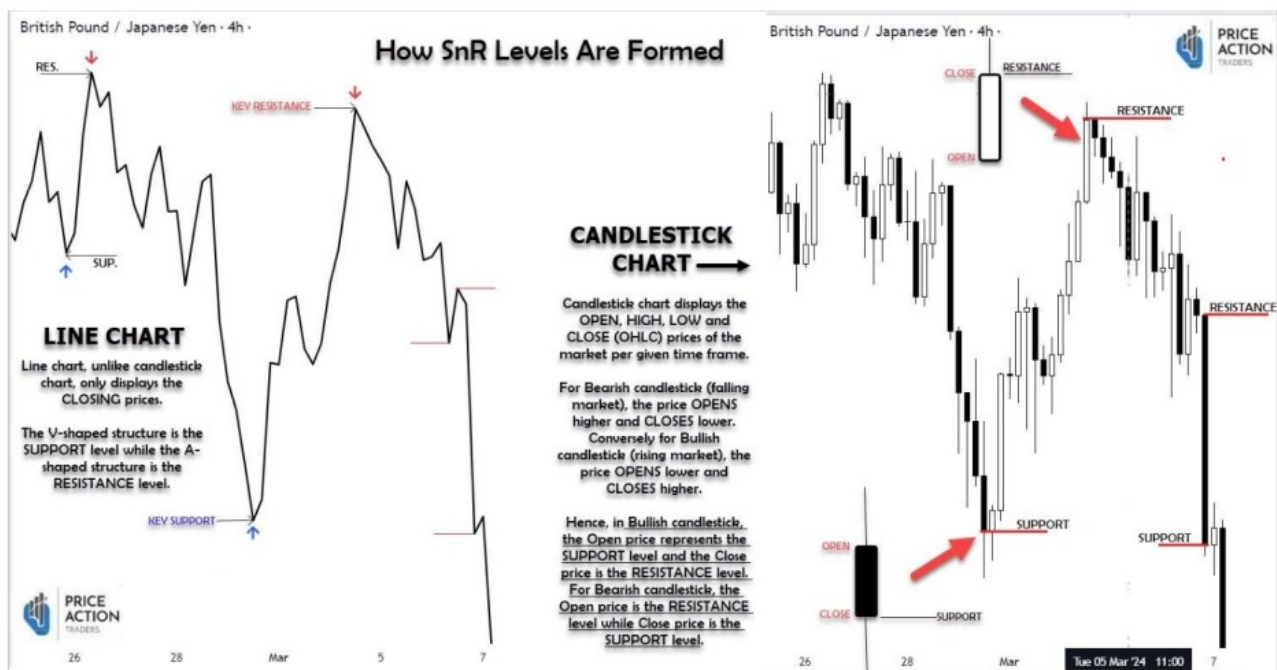

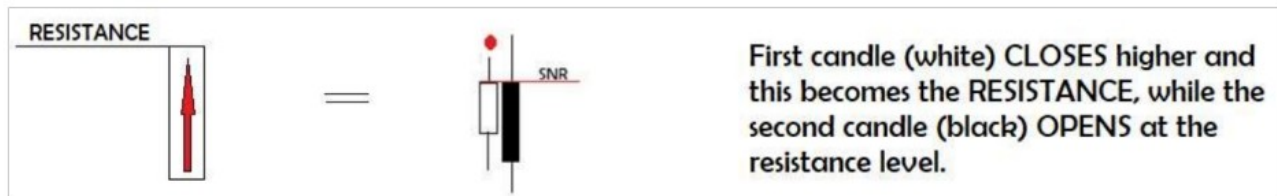

=

SNR

IMPORTANT NOTE

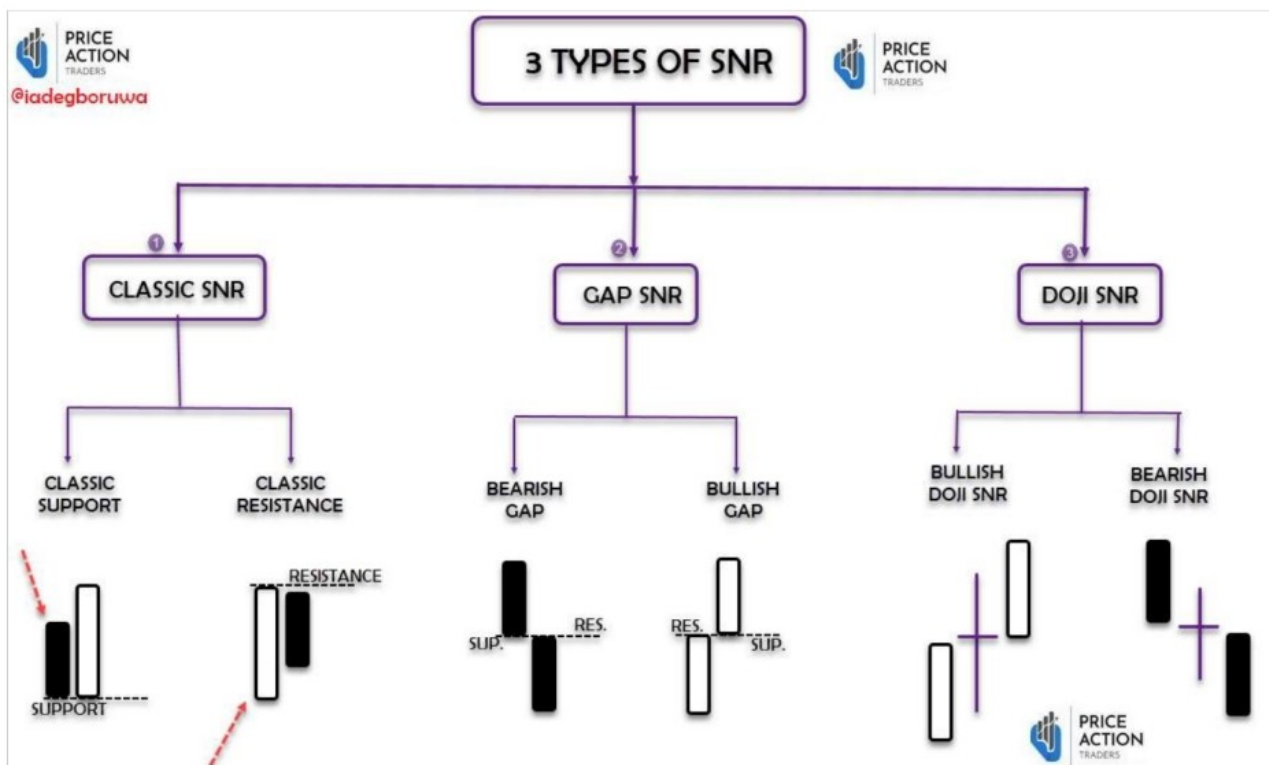

First candle CLOSES lower which is the SUPPORT, and the other candle OPENS at the support level.

NOTE: It does not matter if the second candle opens higher or lower than the first candle's close. This occurs in non-Forex markets (stocks, metals, indices, cryptos, e.t.c.) especially. Our attention is to mark the first candle's close across the open of second candle.

TYPES OF SNR

Basically, we will look into the types of SNR we want to flip for profits. These include: a) **Classical SNR**; b) **GAP SNR** and; c) **Doji SNR**.

What happens when an SNR level is broken? We trade it in the opposite direction – *Flipping strategy*.

Gold/USD 1H:

Gold/USD 4H:

SIGNIFICANT FACT: How long an SNR level travels or gets used does not matter as long as it turned FRESH level in its present state it can be used again.

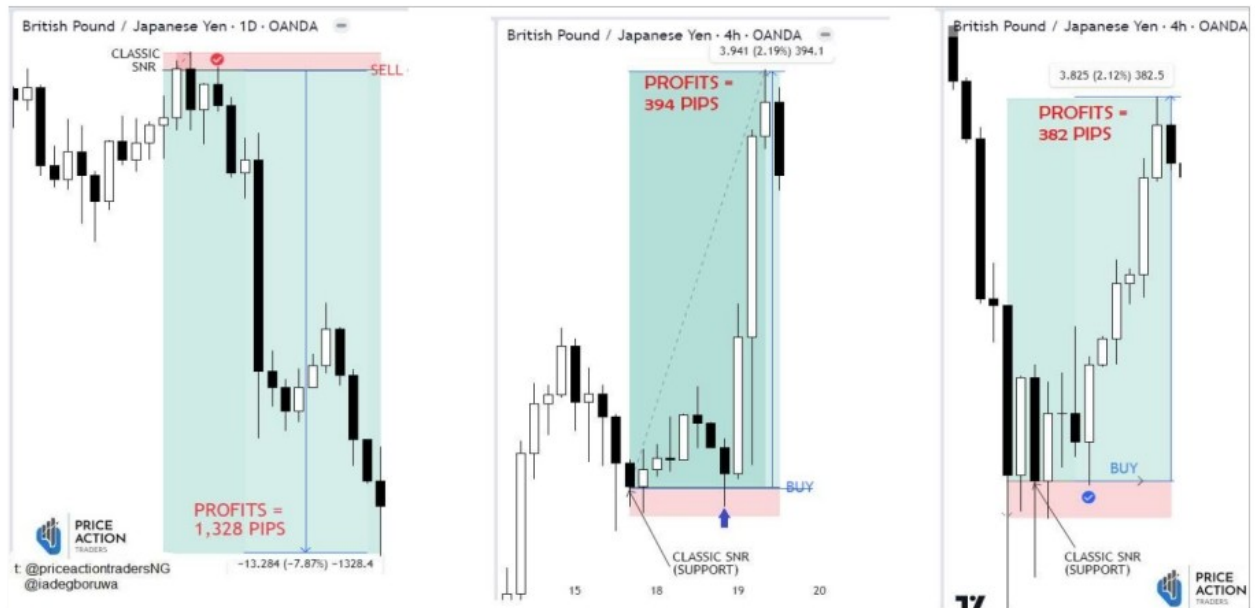

Gold/USD Daily: An SNR level which has been used several times in the past would still be valid for use recently if it is broken through with a body of candlestick.

An SNR level acting as a stronghold, once broken, becomes a wild chase on the other side of price breakout.

But if the SNR level holds or rejects, then we trade it as a *Reversal* pattern.

What about Doji_SNR... How do we trade it? We trade a Doji_SNR same way if it holds or it is broken through. See trade examples on the next page.

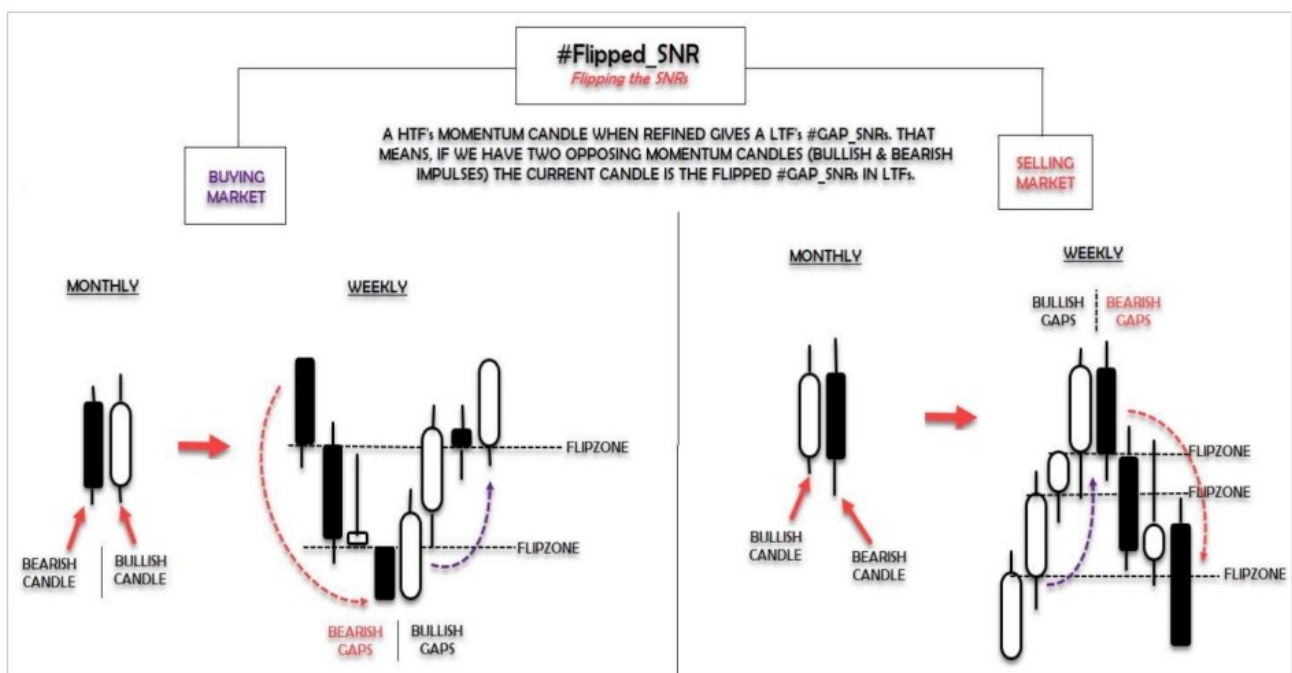

Flipping the SNRs

Flipping the SNRs is a strategy which is simply the breakout of Support and Resistance levels to give a change of control in market direction (the storyline).

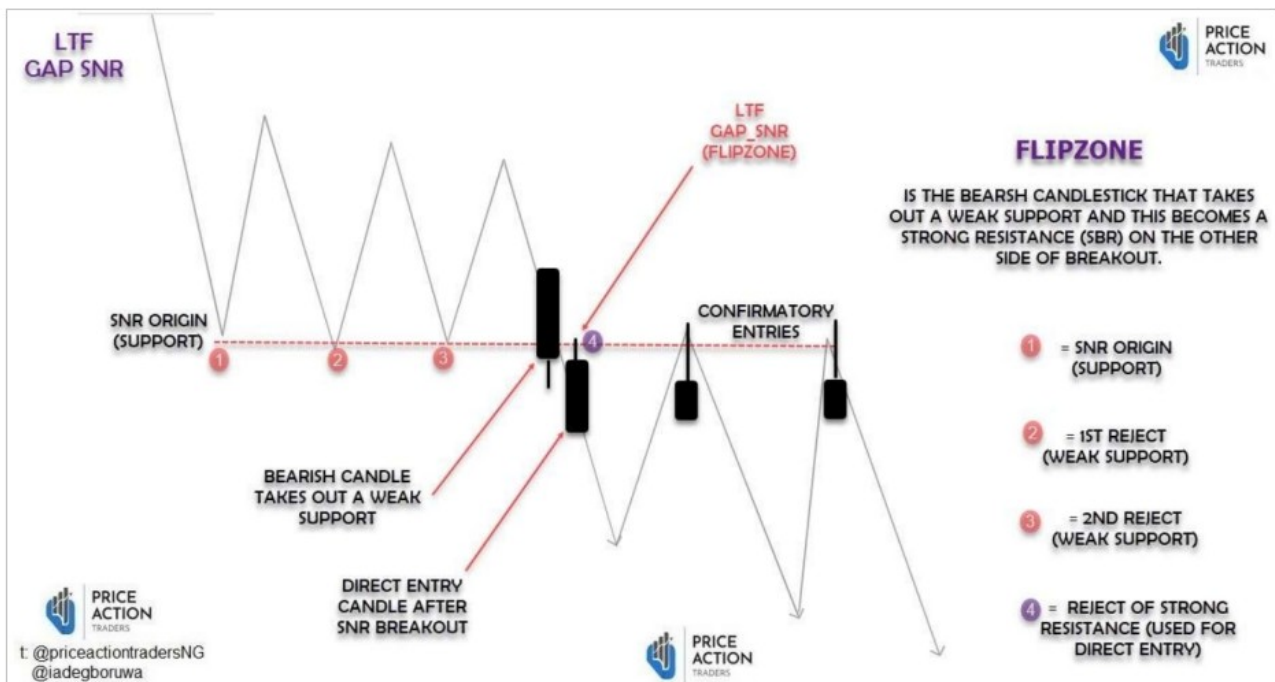

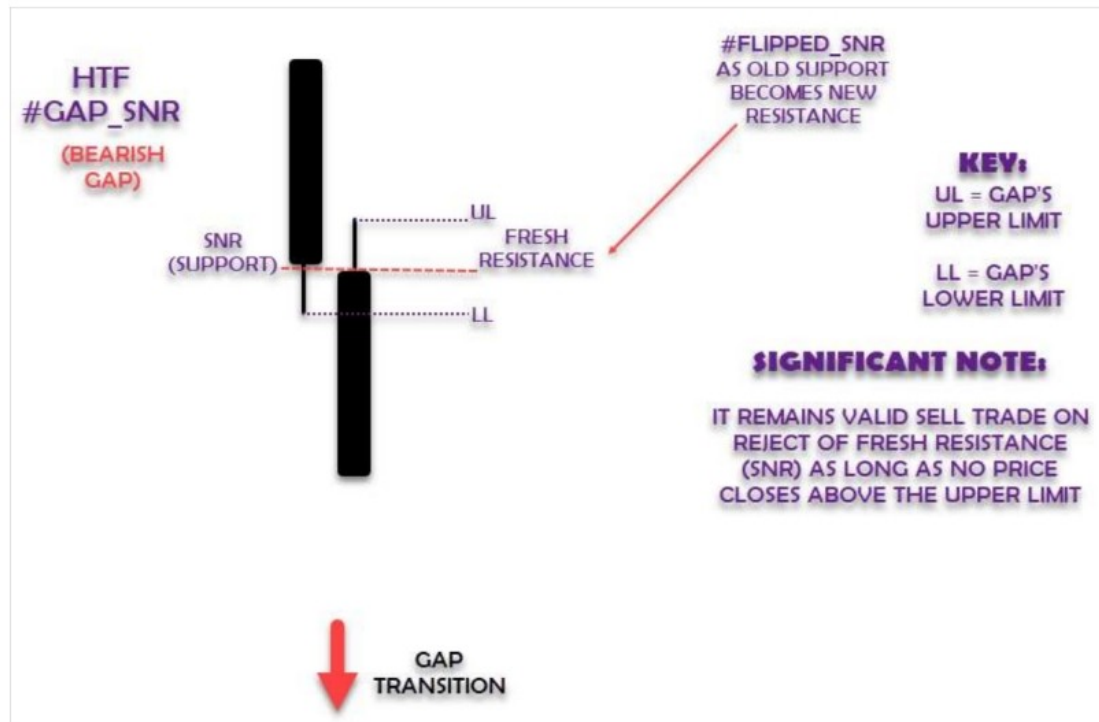

For example, when a particular market force of support line is breached or taken out by another opposing force, it is an indication change of power from broken support to a new resistance – “*Support becomes new Resistance (SBR)*”.

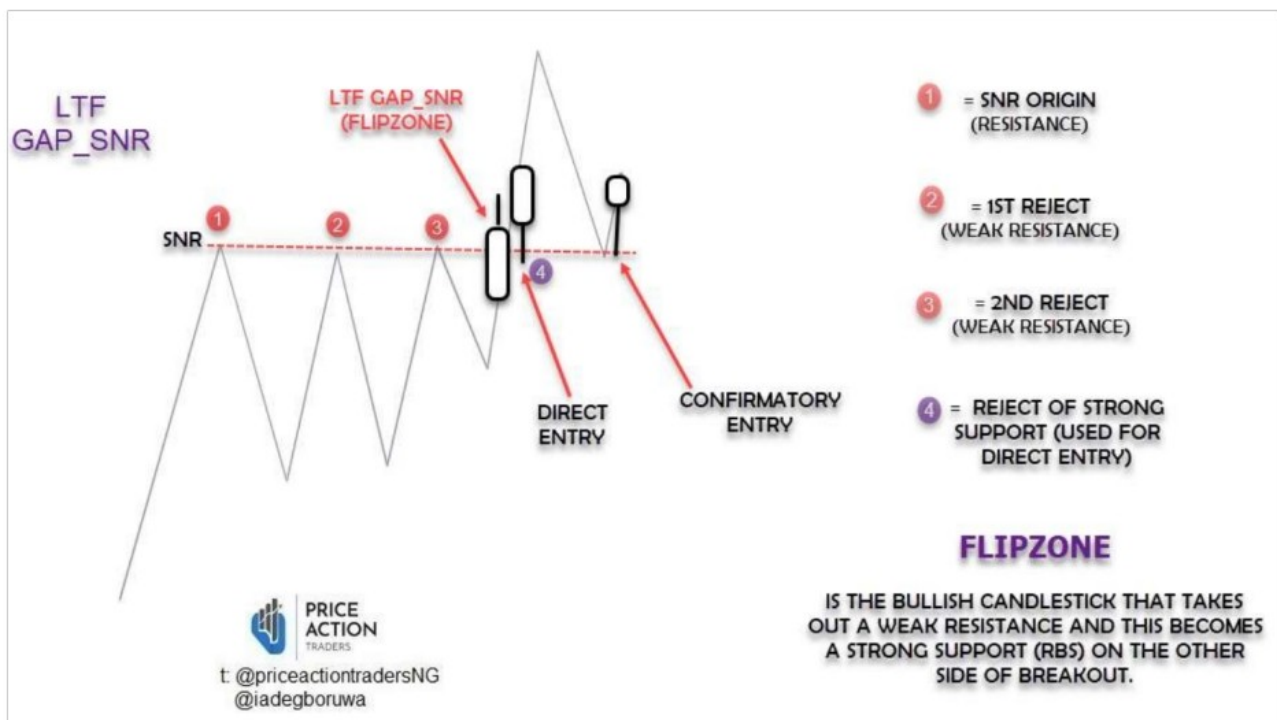

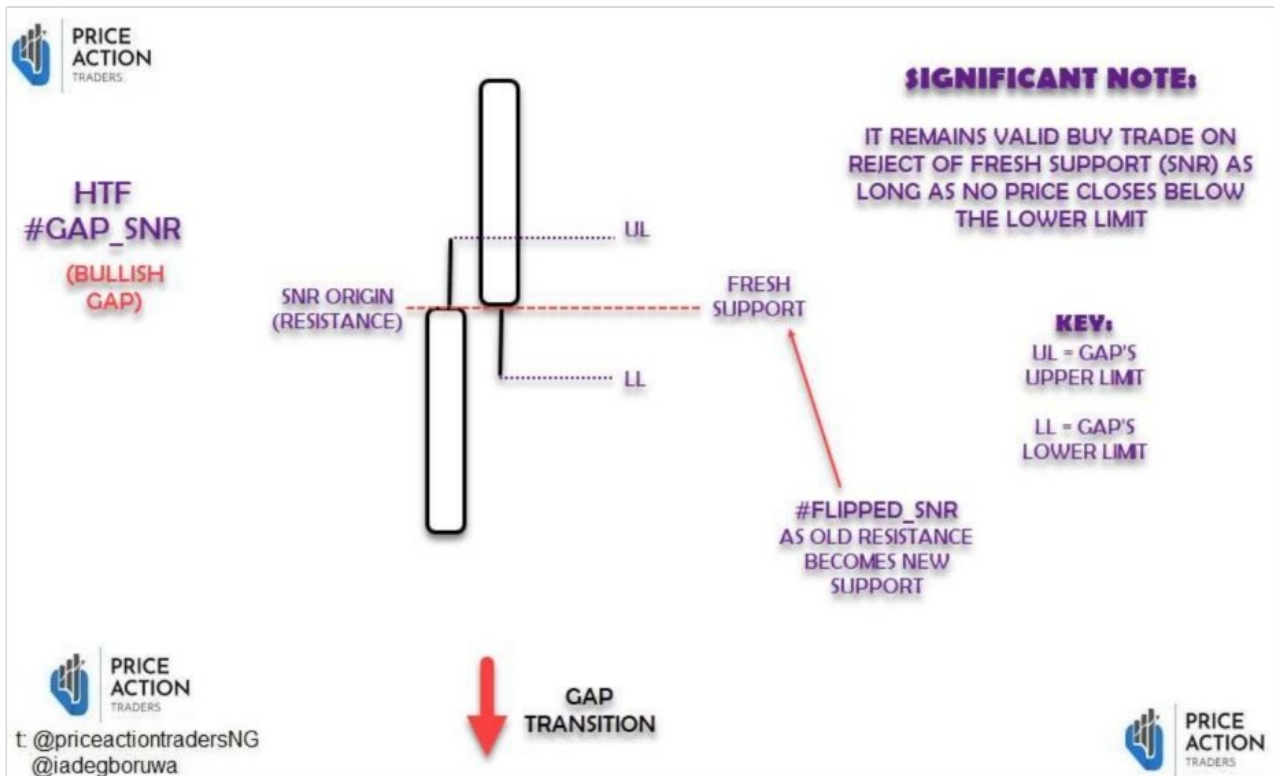

Conversely, when a market force of resistance line is breached or taken out by another opposing force, the broken resistance is automatically transferred into a new support on the other side of breakout – “*Resistance becomes new Support (RBS)*”.

So, Flipping the SNR levels is simply trading the shift of market structure or storyline using a simplified methodology which is rare among traders all over the world.

Dynamics of GAP_SnR

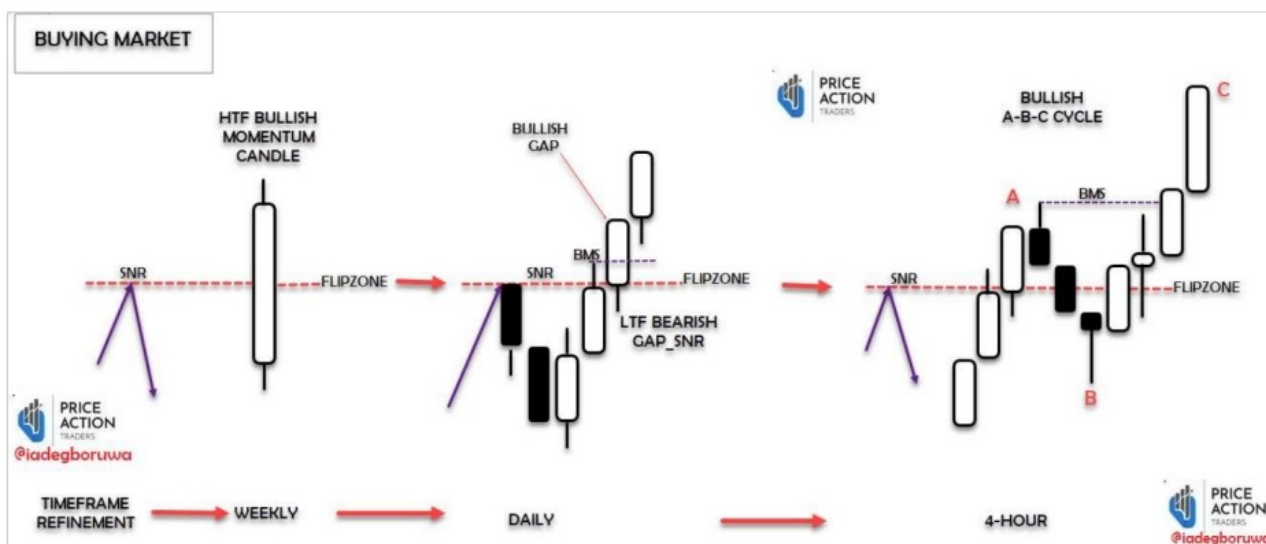

It is interesting to know the foundation of GAP SNR comes from a momentum candle. Let's see this in the next diagram:

The expectation is that if the GAP_SNR level holds, price would REJECT it and continue in the direction of the impulsive move (bearish trend). If the SNR level does not hold, it means that price would break out of the range and then move into the opposite of the impulsive move – SHIFT IN MARKET DIRECTION!

TRADE EXAMPLES

How it plays out!

BTCUSD

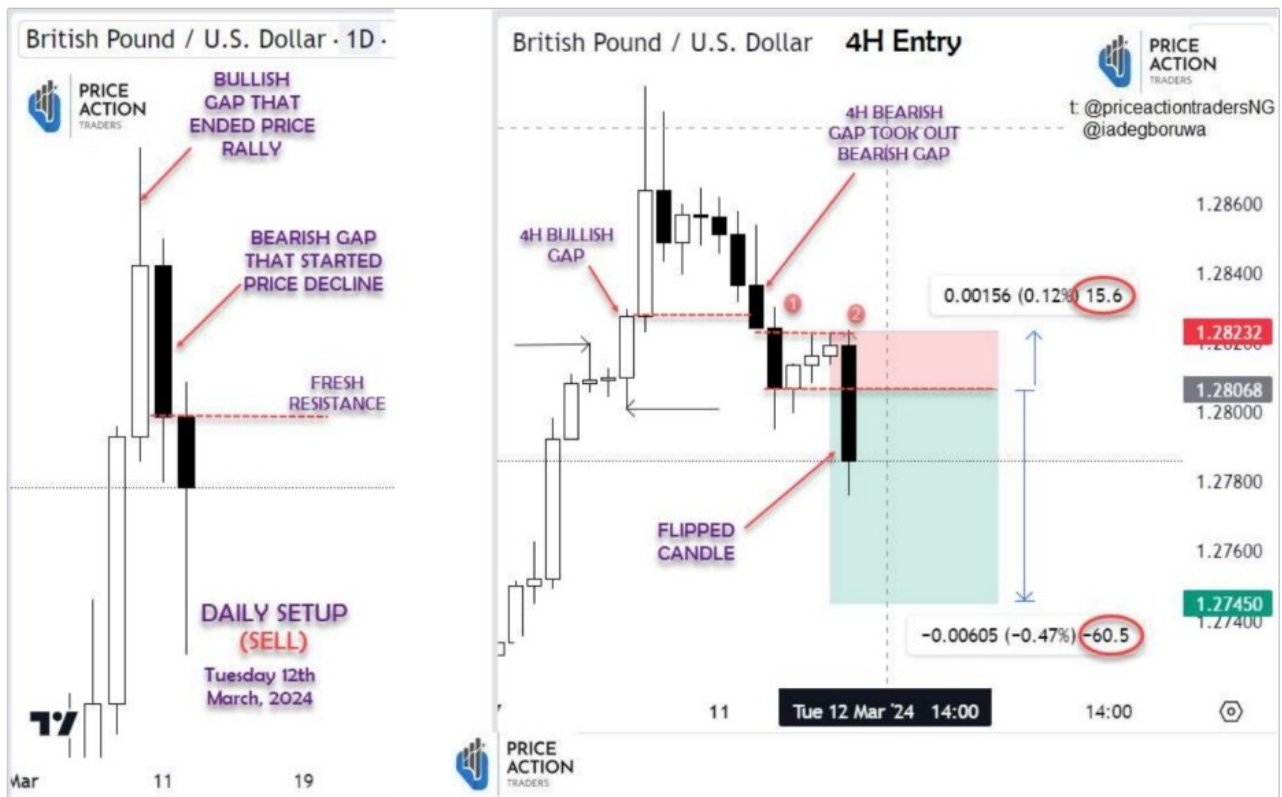

Sell Setup on HTFs – Daily and 4H:

Entry confirmation on 1-HOUR timeframe:

GBPUSD: Setup and Entry Confirmation.

CHECKLISTS

Paying attention to details!

FACT #1:

The recent 4-Hour GAP_SNR, which was transformed from Daily GAP_SNR, is anchored or referenced on a preceding GAP_SNR

FACT #2:

Prior to the recent 4-Hour GAP_SNR, the preceding 4-Hour GAP took out an old 4-Hour Bullish GAP. This is a clear indication of change in market structure.

FACT #3:

A Flipped (Bearish) Candlestick which took out an SNR (Support) to become a fresh SNR (Resistance) on the other side of breakout.

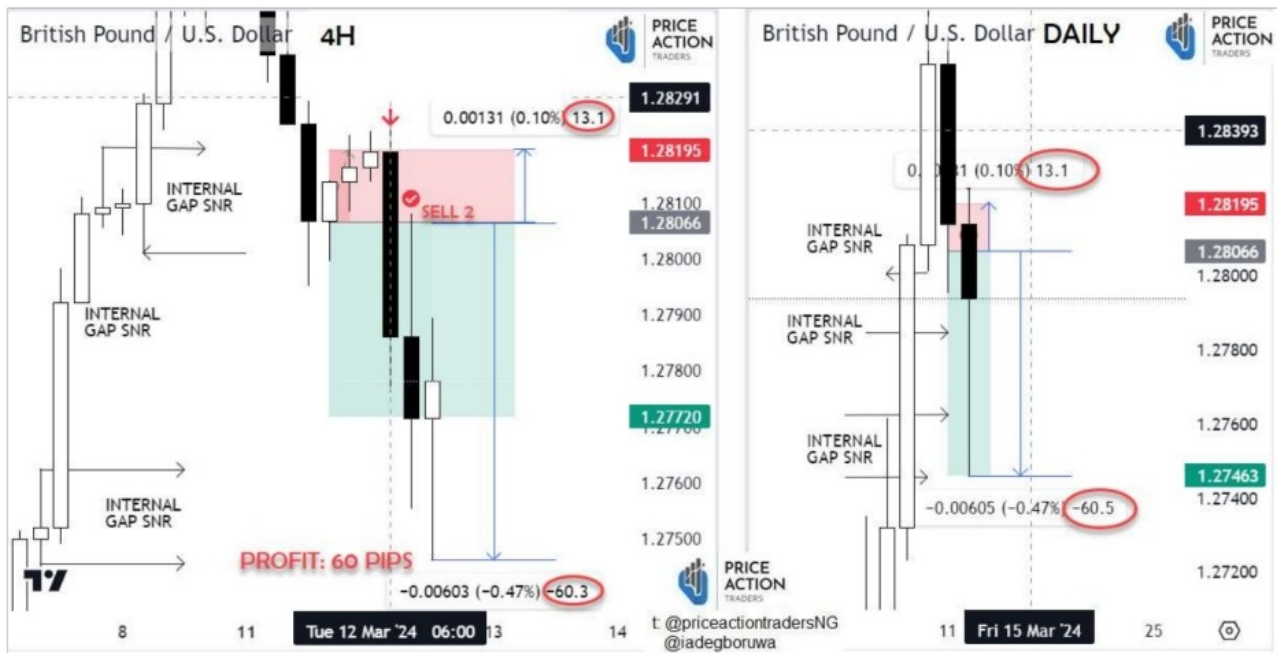

FACT #4:

The Daily GAP_SNR (bearish and bullish) is collapsed into a PIN BAR at rally top. This also signifies price rejection at market top.

FIRST ENTRY: SELL 1 @ Confirmatory retest of GAP_SNR 1.28239, Stoploss of 7 pips. Profit scaling at R-R of 1R:5R. Reward is targeted at 35 pips down.

Go back to Daily TF to have the view of trend direction and the roadblocks (Internal GAPS):

See what you will get on chart refinement to intradays (1-HOUR TF):

Imagine your Stoploss is as low as **4 pips** to get **73 pips** in profits.

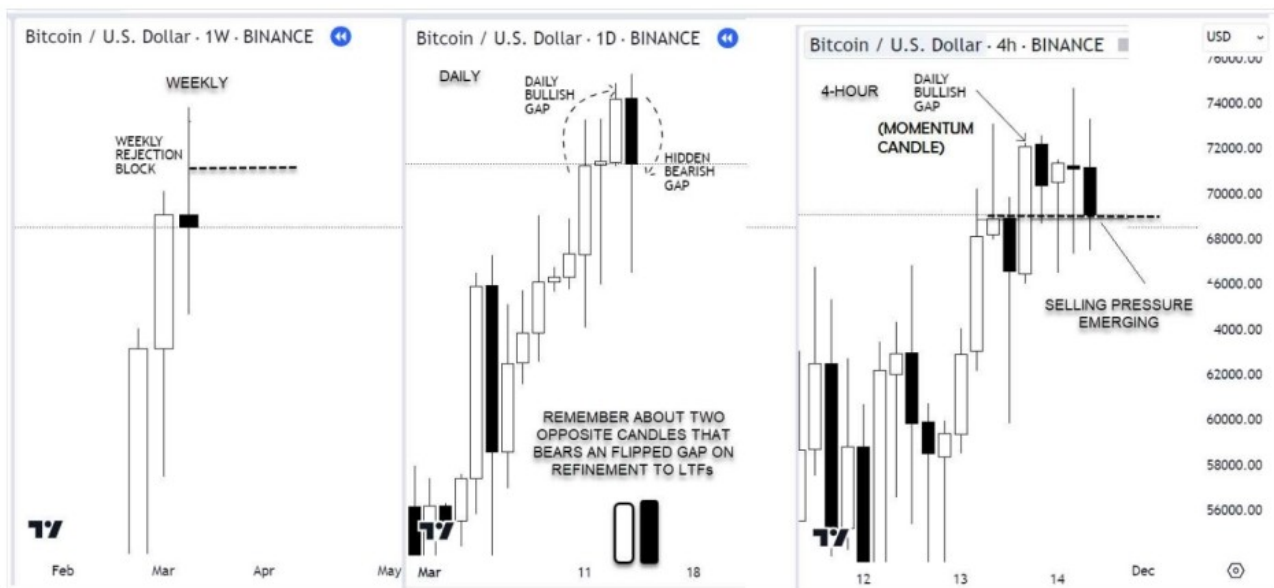

Meanwhile, you can use #Doji_SNR on the same 1-HOUR chart above:

Gold/USD 4H

CHECKLISTS: FACTS TO NOTE

FACT #1: The 4H Setup occurred at previous Flipzones just as you can it happened in the past.

FACT #2: There is a 4-Hour #Doji_SNR that prompted the Bearish GAP overtaking. This was also referenced upon Weekly GAP Reject. This is a clear Bullish Storyline.

4-Hour #GAP_SnR Reject:

Let's see what we get on CHART REFINEMENT.

I will show and guide you on **CHART REFINEMENT** so you can properly manage your risk to achieve higher Risk-Reward ratio. DM me on telegram @iadegboruwa. Tel: +234 803 212 2118

1-Hour TF:

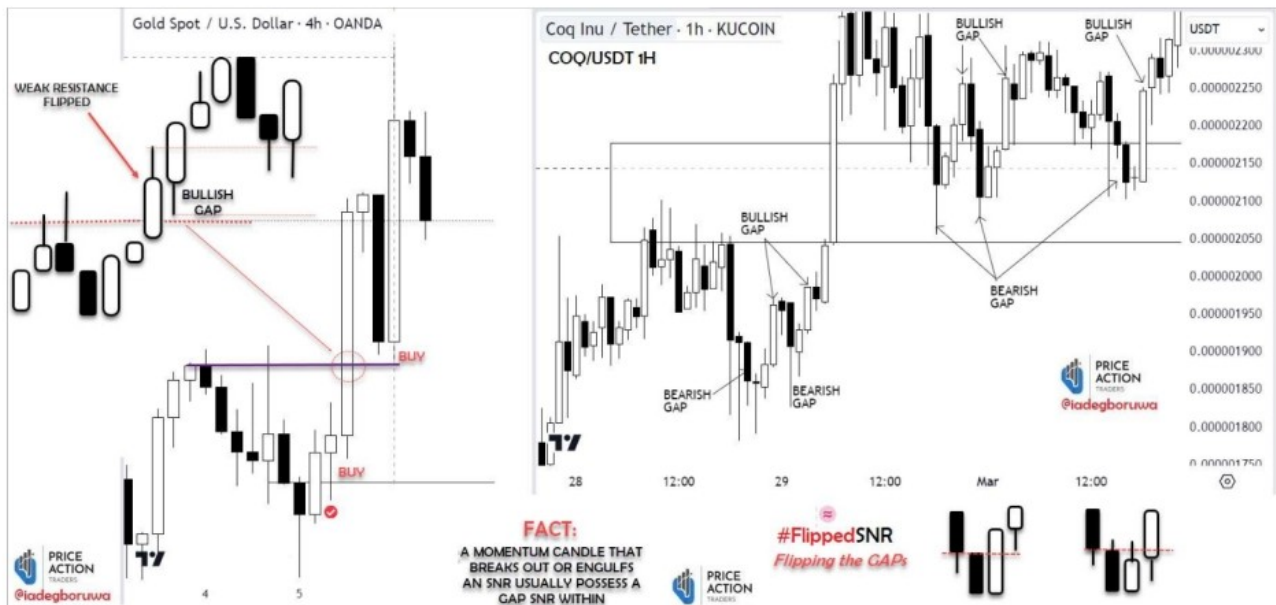

AFTER:

Looking beyond the candlestick:
You must look carefully into the trees in order to see the forest

This happens in all the financial instruments. See example of **Gold/USD** (4H) and **COQ/USDT** (1H)

See Scalpers (intraday traders) who are deeply smart...taking profits, milking dollars \$\$\$ in up and down markets with #Flipped_SNR.

EURUSD 30M (Sell and Buy Trades):

The CHART REFINEMENT skill is exposed to the members of SNR Inner Circle (VIP).

To have access, DM me on [@iadegboruwa](#) or WhatsApp [+234 803 212 2118](#)

EURUSD and **Gold/USD**: Imagine trading on volatile instrument (Gold/USD) with **44 pips** risk of entry (Buy) into making **1,143 pips** on profit margin. That's **1R:26R** in Risk-to-Reward ratio.

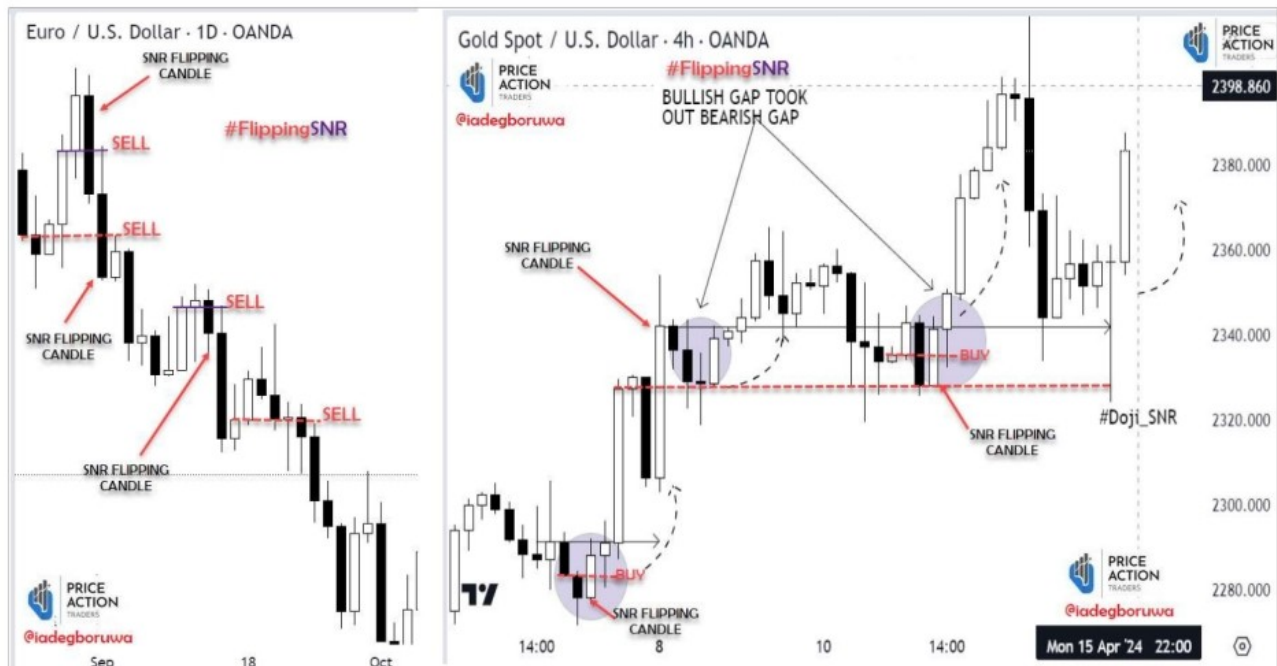

Meanwhile, we can still refine the 4H chart into more LTFs to get very low risk of entry. It is about being smart and bold with your trading skill. And then always have a probabilistic mindset of trading.

And more profits of 315.88% ROI:

How about the Synthetic Indices market on Deriv platform?

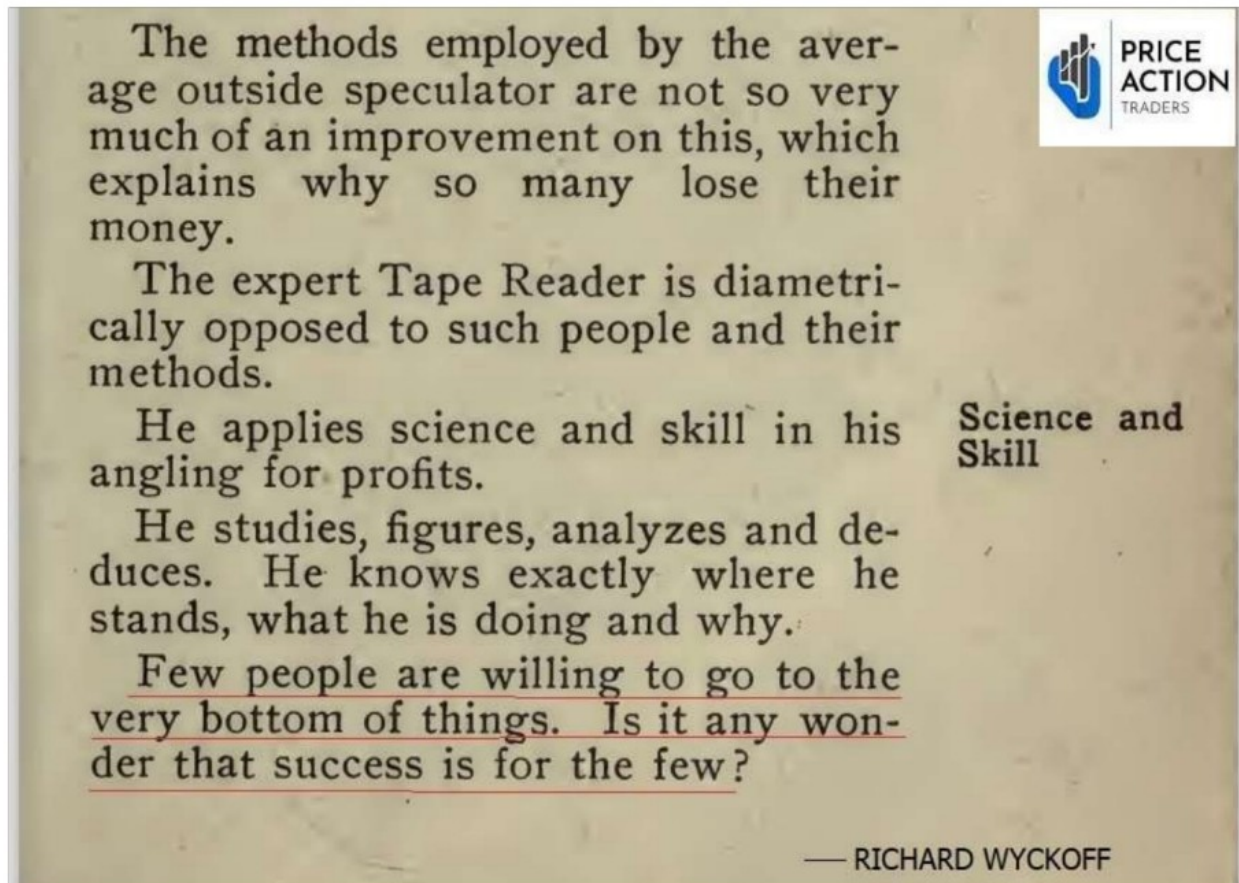

I wish you all the best you ever desire for yourself as you go ahead to apply every bit of **"rare"** knowledge you have been exposed to in this manual.

But let me help build your **CONFIDENCE** in trading by backtesting the trading plan bit by bit, month by month till you master it. Success in trading comes by experience and experience comes by staying much in the field of **"deliberate practice"**.

Never compare yourself to others. Don't be fooled by those big figures showing up on any platform. I have been able to keep this golden nugget from one of my great mentors in the field of trading patterns. His name is Richard Wyckoff. Hear him:

The methods employed by the average outside speculator are not so very much of an improvement on this, which explains why so many lose their money.

The expert Tape Reader is diametrically opposed to such people and their methods.

He applies science and skill in his angling for profits.

He studies, figures, analyzes and deduces. He knows exactly where he stands, what he is doing and why.

Few people are willing to go to the very bottom of things. Is it any wonder that success is for the few?

— RICHARD WYCKOFF

Science and Skill

PRICE ACTION TRADERS

In my journey of life, I have to agree that the key to success in life is to try to be better and smarter than you were in the past.

It is NOT about the course fees but the "rare" information that will be entrusted to you which comes with 100% guarantee that the "rare" SNR Concept is not available or taught anywhere in the world.

Remember,

**If it doesn't
challenge you,**
It will not change you

And,
